

Chapter 1 : FRONTLINE: Specials | PBS

Both are acceptable, but learned is often used in both British English and American English, while learnt is much more common in British English than in American English. We learned the news at about three o'clock.

Aaron not only teaches what they are and how to do them, but also other uses for them. I find that now I prefer using luminosity masks instead of external filters. One to one tuition at its best. It was well worth it. I powered through it this weekend and learned a lot about luminosity masks. Still have a lot to learn but now have a great foundation for it. I cannot wait what else Phlearn and Aaron prepared for me! I know this is one I am going to go back and repeat. I never realized the potential of a RAW file. I was frustrated with the canned products i. HDR tools, but this made me understand what was happening and how I can now insert my touch and make it my art. John Pettett Rated 5 out of 5 October 14, Like most Phlearn tutorials, this is one you need to revise several times. So many subtle techniques are included within the broad sweep of the main topic. I just love it. You will be glad you that you are taking the time to check this out. Aaron does not assume you know things already and does not delve into the science of it all. I just want to know how to use them. Thank you for making it available. Great to be able to see your artistic workflow. I think I am getting better and better with the luminosity mask. Thank You Aaron for this outstanding tutorial. I only have two things about this tutorial which I kept having to pause and look at your flow because you kept changing the flow but never really told us what the flow is so I kept having to pause glance and go back and do more of the luminosity. Also if anyone is new about saving large files since this project is a large file. Looking forward to the next tutorial. Very informative and use of examples helped clarify techniques. Well worth your time to watch. It was a fun and interesting class from end to end.

Chapter 2 : learned vs learnt

Excerpts from Sister Eubank and Sister Aburto's presentation, "That We May All Sit Down in Heaven Together," given May 3, , at BYU Women's Conference in Provo, Utah.

This copy may not be in its final form and may be updated. I imagine they are going to interview two. If there is any credibility, interview the third one. Is that going to satisfy critics of this whole process? Last week during the hearing, we heard a bunch of people say they want the FBI to look into the allegations, essentially the first allegations. And then as soon as that was agreed to, then it seemed like the goalposts kept moving into how much we can delay and how much more we can put in here. I think it is reasonable to look into these allegations. Mara, Mitch McConnell said today you can almost hear the Democrats moving the goalposts. Will they be satisfied? Because this was a deal that was announced by Jeff Flake at the hearing on Friday. But are they moving the goalposts? I think that they have focused on the process. They have been calling for an FBI investigation for some time now. They have gotten on. It could be a situation of beware of what you wish for, you just might get one. And that is why the president said it might be a blessing in disguise. And the president said that at the press conference last Wednesday. So when Cory Booker is locked into the position that Kavanaugh is evil before any of these allegations come up, it is kind of hard to walk back from that. I think, unlike some of my colleagues on the right, I actually thought this was not as terrible an idea from Flake. It is something just Flake wanted. And what is bizarre to me is the scope of this investigation is precisely narrow to make it go through a week, which is what the Democrats on the Judiciary Committee always said is all you need. Well, we got seven days. And yet the Democrats are screaming bloody murder about how this is rigged and a sham. You have Mazie Hirono saying this is already shaping up as a sham investigation while at the same time saying Flake is a hero for doing this. The prosecutor who was brought in from Maricopa County, Arizona, to do the questioning at the hearing on Friday, delivered a report to the Republicans on the Senate Judiciary Committee, in which she said in part, quote, "For the reasons discussed below, I do not think that a reasonable prosecutor would bring this case based on the evidence before the committee. Nor do I believe that this evidence is sufficient to satisfy the preponderance of the evidence standard. Rachel Mitchell took a lot of heat for how she handled that questioning, but I thought it was very informative. And her summary of what she learned was what anybody would have learned if they watched that. The accuser had a story where it changed a lot in terms of when it happened, how it happened, the number of people. It showed that she had very serious problems with her short-term memory and her long-term memory, and it showed that she had actually said things that were in contradiction with each other, such as whether she could travel or not by airplane. So learning all this and saying, at the end, this prosecutor says there is no case, I think anyone could see that there was no case here, but being able to summarize everything that we learned out of Dr. This is a political case. This is about the court of public opinion, although I like how Rachel Mitchell went from being a female assistant to a career prosecutor as soon as she was delivering the report to the Republicans. But right, this is about the court of public opinion. And what we know from polling at least, since the hearing, is more people believe her than him, but the most important audience of course are those three moderate Republicans who are going to make or break this nomination. Jonah, why do you think more people leave her than him? Is it sort of the public sentiment falling on the side of the accuser, or did he not thoroughly acquit himself and his testimony? Because there were a couple of moments where he seemed a little squishy. I think it is a mixed and complicated thing. We are in the midst of essentially this big social movement, which has mostly been for the good, the Me Too stuff, which has primed people to see things through a certain prism. But attitudes can change. What that hearing was about was about supplying evidence to support allegations. No evidence was supplied prior to the hearing, no evidence was supplied during the hearing. We now have an FBI investigation, maybe there will be evidence to support this claim. We have a lot that goes against him. They say she was hired by Republicans. If you have a dispute with the facts, that is one thing. I think people are way too focused on emotion and not enough on actual evidence. If for some reason something came forward that disqualified Kavanaugh or forced him to withdraw, is there any way the president could get a

backup nominee through before the end of the year? What if they hold the Senate? If they hold the Senate maybe they could do it in the lame duck. But no, certainly not before the midterms. And that is a whole other question, what effect will that have. I meant the end of the year. Panel, thanks so much. Chapter 3 : Different Types of Media | Pew Research Center

The deadline of midnight on 4 April has passed and all eligible British companies should, by now, have reported their gender pay gap.. Almost eight years after the Equality Act, we have data.

Joshua participated in the pre-release program for Tableau Prep previously known as Project Maestro. I started my career at Teknion Data Solutions as a software developer. I liked working with data, but I found much of the process of building out ETL packages to be fairly tedious and time-consuming. And testing could be a nightmare! After hours of development and more hours running a process, I might find that half the values were missing or wrong. But then I discovered something that changed my world. That something was Tableau. Here was an application that was seamless, transparent, and intuitive. I could drag and drop fields of data and instantly see visual results. I could ask questions, get immediate answers that would raise new and deeper questions and then quickly find answers to those. Certain types of analysis require certain types of data structures. Or so I thought. I get as excited as anyone about the newest version of Tableau and the latest features. The magic is that all the features work together in a seamless paradigm. The magic, in one word, is flow! Flow means that I can focus on a task or question and work towards a solution or answer without breaking my train of thought. Instead, I get instant feedback and iterating through various options is quick and easy. Tableau Prep has the same magic! At that point, the fundamental engine was in place but the interface was not very fleshed out. My experience would be different today, but with that first iteration UI, it took me a while to really grasp the paradigm of Tableau Prep. Then, after a bit of little trial and error, everything suddenly clicked! Just like other Tableau products, Tableau Prep is hands-on with the data. I can see the data transformations taking place in real time, right before my eyes! No more waiting hours to find that a join failed because of my bad assumption. I can go back to previous steps and instantly see what the structure looked like at that point. I can make adjustments to the data flow and iterate through various options very easily. Over half the rows have null values. I need to fix that before doing the join I can concentrate on one task at a time. I may have an ultimate goal in mind, but I can focus on the data issue that needs to be fixed first before I move on to the next issue. At any point in the flow, I can output to Tableau so I can visualize it to gain deeper understanding as needed. In one such case a client had some data in SQL Server for employee airline travel. But one particular airline used a different booking system, so periodic files were dumped in a directory. Additionally, the client wanted to see one of those amazing flight path maps in Tableau which is great! Except that I knew it would require an additional source of geocoded data and a restructuring of the data to separate origins and destinations into separate records to visualize them using the Path shelf in Tableau. Creating the flow was, just like using Tableau, incredibly fun! I could bring in the data and then focus on one step at a time: Union together SQL Server data with a wildcard union of flat files. Cleanup mismatched data and remove irrelevant fields. Lookup the traveler from a Person table. Split out the route into origin and destination. Pivot the data so I had a single row for each origin and destination. Lookup geocoding from another data source. Do some final cleanup. Export the final data structure. I chose a Hyper extract, but I could have also exported to. At the end I had a very useable data set in Tableau where I could analyze employee airline travel and help the client make decisions about cost savings, travel patterns, airlines, when to purchase, and even create the flight path map: Everything you need to know about Tableau Prep.

Chapter 4 : Gender pay gap: what we learned and how to fix it | Society | The Guardian

Learned is the more common past tense and past participle of the verb calendrierdelascience.com is a variant especially common outside North calendrierdelascience.com British writing, for instance, it appears about once for every three instances of learned.

Chapter 5 : Better Than HDR: Learn to Use Luminosity Masks in Photoshop

If the Democrats had won the Election in , GDP, which was about 1% and going down, would have been minus 4% instead of up %. I opened up our beautiful economic engine with Regulation and Tax Cuts.

Chapter 6 : *“Learnt”*™ or *“learned”*™? | Oxford Dictionaries

We talked yesterday with co-founder and CEO Jonathon Morgan and the company's director of research, Renee DiResta, to learn more about its work, which appears to be going well. (They say revenue.

Chapter 7 : My first few months with Tableau Prep: What I learned and loved

Finding out what you have been taught by watching others, is maybe not the best for your animal, and you learn a new way to do things, that is fair and enjoyable for you both, makes the bond you have with that animal so much better. I love the way this works, and it just makes sense.

Chapter 8 : Repairing a Popup Camper | ThriftyFun

If the company knew how well it works for that, they would probably charge much more for the product! We bought an old Scotty camper many years ago and the awning was horrible looking and smelly with so much calendrierdelascience.com simple green and looked like new.

Chapter 9 : History of Dublin, Ohio | Columbus Neighborhoods | PBS

I may have an ultimate goal in mind, but I can focus on the data issue that needs to be fixed first before I move on to the next issue. And I can know that I've solved the issue before moving on. At any point in the flow, I can output to Tableau so I can visualize it to gain deeper understanding as needed.
