Alright, time to get to the bottom of this. Your payment account information may have been stolen or mishandled. Please monitor your accounts closely. Like hobbit suggested, the website is hosted via dynamic DNS on a server that resides on a Comcast cable network somewhere near Alexandria, VA. The domain name obsidiancorp. The domain name is registered to someone going by the name of Joseph Holt possibly a relative? I did some further digging. I Googled the organization in question and found the person or persons representing this entity also push their sales pitch through Yahoo! Auctions, among other sites. It appears their eBay account has been closed. They also have a nasty practice of spamming forums such as this one. Im telling you I went to [website removed] and they had the manual I needed. I was back up and going in no time. Why is this significant? Because the person selling the ObsidianCorp products at Yahoo! Could this "masterguru" person be the same person named Joseph Holt? If so, we could logically conclude Joseph is responsible for selling these bootleg repair manuals, among other things. Oh, but wait, it gets better! Remember those cheesy testimonials? Here is a sample: When advertising a PT Cruiser repair manual: I purchased information for my car on obsidiancorp. Thank you, ObsidianCorp, for helping me get back on the road without having to get my car towed to a service station. When advertising a piece of PC disk sanitation software: I purchased Godz from you on obsidiancorp. Thank you, ObsidianCorp, for helping me get back on the net without having to get my pc serviced. The similarities are uncanny, no? The moral of this story: Not everything on the Internet is as innocent and transparent as it may seem. Nor may it be very simple to understand!

Return to top What tire pressure is recommended? The additional 5 or 7 psi lets you be a bit lazy about the pressure checking. Extreme climates want additional pressure to deal with the extremes. Return to top How does the Power button work? Return to top What happened to the Start button I saw in commercials? There are Prius advertisements that show a "Start" button, but the button on the actual car reads "Power". In reality, there never was a "Start" button. This is currently available on Japanese and European models only. It appears that Toyota never broached the issue with the EPA on how to test a vehicle with this capability. This feature could increase MPG, but could also decrease the life of the battery. People have speculated that the primary use for such a feature would be for doing things such as pulling the car out of the driveway. Top Prius engineer Dave Hermance is on the record saying the EV button in Japan only works for a maximum of 1 kilometer. When you open your door, the headlights will turn off. This will mean your headlights are always on when driving, such as with Daytime Running Lights. But the Prius sold in the US does not. In the US Prius, you can leave your headlights switch in the "on" position all the time, they will be on day and night when driving, and will turn off automatically when you turn off the car and open the door to leave. This thermos-type container stores three liters of coolant at close to boiling temperature for up to three days. When the Power button is pressed, hot coolant is injected into the engine, avoiding a cold start. This reduces emissions at startup, as well as wear and tear on the engine. Return to top How do I turn off that annoying beeping in reverse? Power on not necessarily ready, IG-ON will do. Power on to ready brake on. Within 6 seconds, press and hold ODO for 10 seconds or more. Press ODO to toggle. The Repair manual page says, however, that if you disconnect the 12v battery, you may lose this change. It has a design on it that says "Prius". It does not go on the BACK of the rear bumper, and does not protect the bumper when you back into something. You can see a picture of it in the files section rear-applique. Return to top How do I turn off the Flashing Maintenance light oil change reminder? Return to top What about jump-starting? Return to top Will tinting my windows hurt my navigation system reception? Many Prius owners on the Yahoo board have reported tinting their windows with no negative effect on NAV reception, and no one yet has posted a problem with it. Reputable tint installers also report never having such a problem. The antenna for the NAV system in the Prius is in the dashboard up near the base of the windshield, so the primary source for satellite signals is through the section of the windshield that normally does not get tinted. Return to top Where can I get a list of voice commands for the navigation system? Service inspection starts automatically and the result will be displayed after a short pause. Return to top How does the Bluetooth system work? If you have a Bluetooth-enabled hand-held cell phone, the Prius hands-free system will automatically connect itself to your hand-held phone with a wireless connection. Callers reach you at your hand-held cell phone number. The only cell phones available today with Bluetooth are on the new GSM cellular network which has limited coverage areas compared to older cellular networks like TDMA and analog. Read more at www. Also check what other people have written about their Prius Bluetooth experiences in the Bluetooth database at <http://> It does support CD-Text, though, so you will get titles on supported discs including ones you burn yourself if titles are added via Nero or other CD-Text capable burning software. A few people with long-term relationships with their dealer have managed a few hundred under MSRP, and some dealers are asking a few hundred to a few thousand over MSRP due to the high demand and low supply.
