

Chapter 1 : CHAOS Report Outline - The Standish Group

A Report from Group 17, published in , is a science-fiction thriller written by Robert Leslie Conly under his pen name Robert C. O'Brien.

Metric Details Please note: To view, please click here. Stone, ScD1; Colby N. Understanding suicides by occupational group provides an opportunity for prevention, but such data have not been reported recently for a broad population or examined by sex and occupation classification. What is added by this report? Analysis of National Violent Death Reporting System data from 17 states indicated that workers in the farming, fishing, and forestry occupational group had the highest rate of suicide. Among males, farming, fishing, and forestry also accounted for the highest rates of suicide. What are the implications for public health practice? Prevention strategies that enhance social support, community connectedness, access to preventive services, and reduction of stigma and barriers to help-seeking are encouraged. From to , rates of suicide among persons in this age group increased. The frequency of suicide in different occupational groups was examined, and rates of suicide were calculated by sex and age group for these categories. Persons working in the farming, fishing, and forestry group had the highest rate of suicide overall. Overall, the lowest rate of suicide 7. Decedents were assigned to SOC codes using three steps. Descriptive data were analyzed, including the number of suicides and rates of suicide by occupational group. Occupational groups were stratified by sex, and rates of suicide were calculated for each group using denominators derived from the U. Rates were not calculated for occupation codes created by the authors, because the Current Population Survey data set does not provide denominator data for these groups. SOC code 55 i. If a decedent had a specific coded job and was employed by the military, that decedent was coded according to the occupation e. Among the 12, suicide decedents included in the data set, 9, Decedents ranged in age from 16 to years; however, Nearly one third of all suicides occurred among persons in the following four occupational groups: The highest proportion Rates of suicide were highest in the following three occupational groups: Rates of suicide varied by sex, with higher rates among males than females in all occupational groups Table 2. Among males, the highest suicide rates were among persons in the following three occupational groups: Among females, the highest suicide rates occurred among persons in the following three occupational groups: Top Discussion Earlier studies of suicide by occupation type in the United States have examined one occupational group at a time, such as police suicides 6, or have studied data from a specific U. This analysis includes recent data from 17 states and an analysis by sex. The proportions of suicides among males Occupational groups with higher suicide rates might be at risk for a number of reasons, including job-related isolation and demands, stressful work environments, and work-home imbalance, as well as socioeconomic inequities, including lower income, lower education level, and lack of access to health services 7,8. Other factors that might contribute to suicide among farmers include social isolation, potential for financial losses, barriers to and unwillingness to seek mental health services which might be limited in rural areas, and access to lethal means 8. Construction workers might be at higher risk because of financial and interpersonal concerns related to lack of steady employment, and fragmented community or isolation 9. It has been hypothesized that one possible factor contributing to higher suicide risk among workers in installation, maintenance, and repair occupations might be long-term exposure to solvents that can cause neurotoxic damage, including memory impairment and depressive symptoms 8. Research has suggested that higher suicide rates among police are related to stressors including exposure to traumatic, violent, and lethal situations; work overload; shift work; and access to lethal means 6,8. Females in protective service occupations might also experience additional stressors in these traditionally male-dominated occupations 6. Of note, while management occupations had the 10th highest rate of suicide, they accounted for the second largest percentage of suicide deaths overall; therefore, it is important to target prevention strategies to managers as well. The findings in this report are subject to at least four limitations. First, for 5. Second, using an automated system such as NIOCCS, a computer algorithm, and human coders to assign occupation codes might introduce errors in categorizing industry and occupation; however, interrater reliability checks suggested a high level of consistency. Third, coding of industry and occupation in NVDRS,

which uses open-ended fields, depends on the completeness of information available from the NVDRS data sources and accuracy of information provided by informants to these systems e. For this reason, CDC provides abstractor training, and states conduct blinded re-abstraction of cases to test consistency and identify training needs. Analyses of forthcoming data from the expansion of NVDRS into 32 states in might provide more representative findings, and permit examination of occupational trends over time. Some potential suicide prevention strategies include workplace approaches, such as employee assistance programs, which might serve as gateways to behavioral health treatment. Workplace wellness programs can provide education and training for staff members and supervisors to aid in recognition of suicide warning signs e. Employers also can use technology to provide online mental health screenings, web-based tools for mental health information, and mental health screening kiosks for their employees, as well as ensure that employees are aware of the National Suicide Prevention Lifeline [http: The National Action Alliance for Suicide Prevention NAASP Workplace Task Force](http://www.natl-suicidepreventionlifeline.org) has developed a Comprehensive Blueprint for Workplace Suicide Prevention that addresses suicide prevention strategies, such as screening, mental health services and resources, suicide prevention training, life skills and social network promotion, and education and advocacy. Evidence-based suicide prevention strategies implemented in the workplace have the potential to reduce the number of suicides among all occupational groups.

Chapter 2 : - A Report from Group 17 by Robert C O'Brien

A Report from Group 17 has 69 ratings and 11 reviews. Alan said: In , in between the publications of Mrs. Frisby and the Rats of NIMH and the posthum.

We also outline the attributes of a losing hand. There is one chart on this page title is Winning Hand versus Losing Hand. Page 2 Project Size: We also display 2 tables: Page 3 Agile versus Waterfall: We also break down agile and waterfall by size. We also discuss agile in name only. Our one table on this page is resolution by method. Page 4 Traditional Resolution: On this page we display 3 pie charts one table: We also display the Traditional Resolution for all projects table from to Page 5 Modern Resolution: On this page we display 3 pie charts by value, goal, and satisfaction. We also display the Modern Resolution for all projects table from to Page 6 Resolution by Industry: On this page we also display 2 pie charts with the emotional maturity skills of success projects and failed projects. Emotional maturity is relevant to the difference in success for major areas of the world. Page 8 Project Type: On this page we also display 2 pie charts. The first pie chart is Small Modernization Projects with a skilled executive sponsor. The second pie chart is large purchased off-the-shelf application software with extensive modifications with an unskilled executive sponsor. On this page we have one table that depicts the resolution of all software projects by complexity from " within the CHAOS database. We also have 2 pie charts showing resolution of small easy projects and large, complex projects. On this page we have one table that depicts the resolution of all software projects by goal from " within the CHAOS database. We also have 2 pie charts showing resolution of small, loose to vague and small, close to precise projects. Page 11 Skilled Staff: On this page we have one table that depicts the resolution of all software projects by capability from " within the CHAOS database. We also have 2 pie charts showing resolution of very high-value projects by skill-level and very low-value projects by skill-level. If you would like to purchase this report go here.
