It is possible to earn bonus points by asking particularly good questions or suggesting corrections to errors in notes and materials on the course website. This does not include spelling or grammatical errors, those are provided for your amusement. Once I notify the class of the error you may no longer ask for that point. I also provide a little bonus project from time to time. These are not required. It is entirely possible to earn an A without completing these. I will usually be able to take these as late as the final exam day, just ask. More work, more difficulty, more credit. Homework in advanced mathematics is just as important as it was in calculus, algebra and trigonometry. However, in practice most advanced math courses are not about building skill in calculations. Rather, the focus is on absorbing new definitions and concepts. Homework in advanced mathematics courses is more often about gaining conceptual skill. As we work more and more "proofs" we gain an understanding of what the purpose of doing proofs is. Mathematical maturity is not gained overnight, but rather in a series of small but consequential battles. You need to be determined to persevere against the homework even when it seems to be pointless. When confronting many "proof" problems in this course and in more advanced abstract math courses you ought to ask yourself: What information is given in the proof? What is not given? What are we trying to show? What are the definitions that apply? It is not usually the case that you will find the same proof in my notes or the text. Definitions are key, I cannot emphasize this enough. I have provided a wealth of solved problems for your convenience. Some of those problems are a little more advanced than your homework, but there is something to learn in most everything I solved. If nothing else you can hunt for errors, there are likely many bonus points to be gleaned. I was pretty tired when I wrote them.

I agree the reviews don't look too appealing, but I've found a few things to be true regarding mathematic course/book assessments. 1: Many of the people giving reviews are just angry because math is hard and they got a bad grade, generally from their own lack of work.
