

Chapter 1 : Photoshop Basics Tutorials For Beginners - Learn Adobe Photoshop

Welcome to the Get Started with Photoshop tutorials that teach you the basic tools and techniques of Adobe Photoshop CC. This tutorial introduces you to the Photoshop work area and shows you how to open and save your images, zoom in and out, and undo mistakes.

The tools can be broken into several distinct categories. This will help you find them when you know what kind of tool you need. The illustrations below show an overview of the toolbox, with each tool available and its shortcut key. I strongly encourage you to start making a mental note of the shortcuts. Some of the shortcuts are really easy to remember such as Z for the Zoom tool or E for the Eraser. So instead of clicking on the tool in the Toolbar, just press the letter on the keyboard. This will dramatically speed up your workflow as it lets you change tools without taking your hands off the keyboard. Hidden tools are accessed by clicking and holding on that tool. As you hold, a fly-out set of tools will appear giving you access to all of the hidden tools under that particular tool. In the example below, you can see that by clicking and holding on the Magic Wand tool, the hidden Quick selection Tool becomes available. For example, to cycle through the Brush, Pencil, Color Replacement and Mixer Brush tools, you would press B to select the first tool and then hold down Shift and press B again to move through that particular set of tools. Moving The Toolbar To change the Toolbar from a single column to a two-column panel, click once on the double arrow button in the top-right corner. To switch back again, simply click the double-arrow button again. To float the Toolbar anywhere on your screen, drag it away from the left-hand screen edge. To dock it back to the edge of the screen, drag the panel all the way to the edge until a blue vertical bar appears against the edge of the screen. The blue bar is an indication to let go and the panel will snap into place and is once again docked. By default the foreground is black and the background is white. Photoshop uses the foreground color when you paint or fill an area with color. The background color is used as a second color when you create a gradient and when you erase parts of a locked Background layer amongst other things. To change a color, click on its color swatch once to open the Color Picker. From here you can choose from millions of colors. To swap your foreground and background colors, click the round double-headed arrow just above the foreground and background swatches or press X on the keyboard. To set both color swatches back to their default factory setting of black and white, click the miniature swatches or press D. This gives further hints about how to use any particular tool. Thank you so much! Now check your email to confirm your subscription and download your Photoshop Toolbar cheatsheet. There was an error submitting your subscription.
