China University of Political Science and Law Death of Hu Yaobang[ edit ] When Hu Yaobang suddenly died of a heart attack on 15 April , students reacted strongly, most of them believing that his death was related to his forced resignation. Within days, most posters were writing about broader political issues, such as freedom of the press, democracy, and corruption. Its laying-party was on 17 April and a larger-than-expected crowd assembled. The gathering featured speakers from various backgrounds giving public orations commemorating Hu and discussing social problems. However, it was soon deemed obstructive to the operation of the Great Hall, so police tried to persuade the students to disperse. Starting on the night of 17 April, three thousand PKU students marched from the campus towards Tiananmen Square, and soon nearly a thousand students from Tsinghua joined. Upon arrival, they soon joined forces with those already gathered at the Square. As its size grew, the gathering gradually evolved into a protest, as students began to draft a list of pleas and suggestions Seven Demands for the government: Admit that the campaigns against spiritual pollution and bourgeois liberalization had been wrong. Publish information on the income of state leaders and their family members. Allow privately run newspapers and stop press censorship. End restrictions on demonstrations in Beijing. Provide objective coverage of students in official media. Meanwhile, a few thousand students gathered at Xinhua Gate , the entrance to Zhongnanhai , the seat of the party leadership, where they demanded dialogue with the leadership. Police restrained the students from entering the compound. Students then staged a sit-in. On 20 April, most students had been persuaded to leave Xinhua Gate. To disperse about students that remained, police used batons; minor clashes were reported. Many students felt abused by the police, and rumours about police brutality spread quickly. This incident angered students on campus, where those who were not politically active decided to join the protests. On the evening of 21 April, some , students marched on Tiananmen Square, ignoring orders from Beijing municipal authorities that the Square was to be closed off for the funeral. The funeral, which took place inside the Great Hall and attended by the leadership, was broadcast live to the students. General secretary Zhao Ziyang delivered the eulogy. The funeral seemed rushed, and only lasted 40 minutes, as emotions ran high in the Square. Three of these students knelt on the steps of the Great Hall to present a petition and demanded to see Premier Li Peng. From this vantage point, the Union called for a general class boycott at all Beijing universities. Such an independent organization operating outside of party jurisdiction alarmed the leadership. In Changsha, 38 stores were ransacked by looters. Over people were arrested in both cities. In Wuhan, university students organized protests against the provincial government. Zhao stressed three points: Despite calls for him to remain in Beijing, Zhao left for a scheduled state visit to North Korea on 23 April. Instead of scaring students into submission, it squarely antagonized the students against the government. While the talks discussed a wide range of issues, including the editorial, the Xinhua Gate incident and freedom of the press, they achieved few substantive results. Independent student leaders such as Wuer Kaixi refused to attend. Subsequently, the majority of students began to lose interest in the movement.

## Chapter 2 : Explorable - Think Outside The Box - Research, Experiments, Psychology, Self-Help

*Includes bibliographical references and indexes A consideration of the similarities and differences between art teaching and art therapy / Diane Waller -- Art, psychotherapy, and symbol systems / John Henzell -- Art therapy as a form of psychotherapy / John Birtchnell -- Alternative models for describing the development of children's graphic work / J.K. Dubowski -- The child and art therapy.*

He had countercultural strips published in underground periodicals [8] and in published the first issue of Zap Comix. At the age of 29, Bakshi was hired to head the animation division of Paramount Pictures as both writer and director, where he produced four experimental short films before the studio closed in . In a article for the Los Angeles Times Bakshi said that the idea of "grown men sitting in cubicles drawing butterflies floating over a field of flowers, while American planes are dropping bombs in Vietnam and kids are marching in the streets, is ludicrous. Animation is essentially a dirty word for distributors, who think that only Disney can paint a tree, and in addition to that, Fritz was so far out that there was a failure to understand that we were onto something very important. One of them left the room. Holy hell, you should have seen his face. In , The Hollywood Reporter stated that Fritz the Cat recouped its costs in four months following its release. Bakshi refused, and Warner pulled their funding from the film, leading Krantz to seek funds elsewhere. This led to a deal with Jerry Gross, the owner of Cinemation Industries , a distributor specializing in exploitation films. Although Bakshi did not have enough time to pitch the film, Gross agreed to fund its production and distribute it, believing that it would fit in with his grindhouse slate. Bakshi was initially reluctant to direct Fritz the Cat because he had spent years working on animated productions featuring animal characters and wanted to make films focusing on human characters. Which was hysterically funny and, I think, greatâ€”like Uncle Remus stuff. And I always told him that the black crows were funnier. So it was a slow awakening. Bakshi states that "The weed had to read on screen. When the credits end, it is shown that the construction worker has urinated on a long-haired hippie with a guitar. Cohen writes that the film "is a product of the radical politics of the period. Another scene features a reference to the " Pink Elephants on Parade " sequence from Dumbo. The script and storyboards went largely unused in favor of more experimental storytelling techniques. The way you feel about a film on Day One, you may not feel the same way forty weeks down the road. Characters grow, so I wanted to have the option to change things, and strengthen my characters It was sort of a stream of consciousness, and a learning process for myself. It was cute, it was sweet, but there was nowhere to put it. For the voices of the rabbis, Bakshi used a documentary recording of his father and uncles. This scene continued to have a personal significance on Bakshi after his father and uncle died. Bakshi states, "Thank God I have their voices. I have my dad and family praying. The background is a watercolor painting based on a tracing from a photograph, giving the film a stylized realism virtually unprecedented in animation. Those who entered with a smirk, "wanting to be very dirty and draw filthy pictures", did not stay very long, and neither did those with a low tolerance for vulgarity. One cartoonist refused to draw a black crow shooting a pig policeman. Two female animators quit; one because she could not bring herself to tell her children what she did for a living, the other because she refused to draw exposed breasts. Bakshi states that he knew that "Sparey would execute them beautifully. The timing falls off. When it was introduced as such at a showing at the University of Southern California , Bakshi stated firmly, "Fritz the Cat is not pornographic. However, neither film was actually submitted to the MPAA, and it is not likely that either feature would have received an X rating. Shame of the Jungle was initially released with an X rating in a subtitled version, but a dubbed version released in received an R rating. They treat it like a film. This is the real thing, to get people to take animation seriously. The point is, animation was making people get up off their asses and get mad. The younger people, the people who could take new ideas, were the people I was addressing. To those people who loved it, it was a huge hit, and everyone else wanted to kill me. According to Bakshi, Crumb was dissatisfied with the film. The last time I saw it was when I was making an appearance at a German art school in the mids, and I was forced

## DOWNLOAD PDF ALTERNATIVE MODELS FOR DESCRIBING THE DEVELOPMENT OF CHILDRENS GRAPHIC WORK J.K. DUBOWSKI

to watch it with the students. It was an excruciating ordeal, a humiliating embarrassment. I spoke to him on the phone. We both had the same deal, five percent. They finally sent Crumb the money and not me. I have no respect for Crumb. Is he a good artist? Yes, if you want to do the same thing over and over. He should have been my best friend for what I did with Fritz the Cat. I drew a good picture, and we both made out fine. Although producer Krantz and voice actor Hinnant returned for the follow-up, Bakshi did not. Nine Lives was distributed by American International Pictures , and was considered to be inferior to its predecessor. Barrier described the films as an effort "to push beyond what was done in the old cartoons, even while building on their strengths".

## Chapter 3 : Tiananmen Square protests - Wikipedia

*model of how the program is supposed to work, the evaluator can consider social science theories related to the program as well as program resources, activities, processes, and outcomes and assumptions (Bickman, ).*

Allen, p 53 2. Goals in an Institutional Setting Shoemaker, p. For those who have "no hope of getting better" severe mental handicaps, psychogeriatrics, long term institutionalized etc. Relationship a Rogers suggested a client centered approach to psychotherapy. He suggested that there are 3 important factors that are essential to the therapeutic progress: Cunningham-Dax, b Active participation and cooperation from the client is an important part of art therapy in order for an art therapist to initiate an interpretation of a piece of art. Dalley, i A client demonstrates progress by expressing verbally what is represented in the art form. Birtchnell ii The client moves talking about their art and what it represents into taking action. Concepts and Beliefs 1. Beliefs of Man a It relies on the psychoanalytical notion that man is driven by unconscious desires. Main Concepts a Art in therapy combines both conscious and unconscious expression through concrete activity. Magic mastery through pictorial presentation is a regression to the identical stage of adaptation to reality in which the original traumata, now pressing for reparation, occurred; in most cases to the preverbal phase. The technique used in therapeutic painting is on a level with thinking and of expression, it is on the same plane as the unconscious thought itself. No-one else can create the same result on paper or canvas. Art therapy offers an area where the patient can proclaim his identity and it offers an atmosphere where he can be himselfâ€¦ Art offers a medium which can give both communication with others and confrontation with the self. Allen, p ii Sexually abuse children will often distort genitals and other areas of abuse in their drawings. They need to understand the familiar patterns and images before they can create new ones. Basic Principles a Art is a concrete object that is visually presented for everyone to see. Birtchnell b Art in therapy is created for a specific reason, and for specific people. John Birtchnell suggested that "the destructibility is an important quality: Sometimes the actual destroying of a picture and the way it is destroyed can be a positive component of therapy. Birtchnell d Art can safely represent something that causes the client fear. Birtchnell e Art allows the client to fantasize about actions that they are not allowed to enact in reality. John Birtchnell suggested that "accepting and owning the less acceptable aspects of oneself means that less energy is spent denying their existence. Birtchnell g Art is a metaphor. Birtchnell h Art may represent the past, present or the future. What Art Therapy is Not: Dalley, a Not only for potential artists or those with natural talent in the subject. Majority of patients who are treated successfully have neither drawn nor painted before. Clinical assessments made by taking an overall account of art work and how it has developed and changed during course of therapy.

Scope[ edit ] Augmentative and alternative communication is used by individuals to compensate for severe speech-language impairments in the expression or comprehension of spoken or written language. The addition of "alternative" followed later, when it became clear that for some individuals non-speech systems were their only means of communication. First was the work on early electromechanical communication and writing systems. The second was the development of communication and language boards, and lastly there was the research on ordinary without disability child language development. For example, the Amer-Ind code is based on Plains Indian Sign Language , and has been used with children with severe-profound disabilities, and adults with a variety of diagnoses including dementia , aphasia and dysarthria. This speech generating device, showing available categories in a grid layout, is a high-tech AAC aid. An AAC aid is any "device, either electronic or non-electronic, that is used to transmit or receive messages"; [5] such aids range from communication books to speech generating devices. Alternatively, they may indicate yes or no while a listener scans through possible options. Speech generating device High-tech AAC aids permit the storage and retrieval of electronic messages, with most allowing the user to communicate using speech output. Static communication devices have symbols in fixed positions on paper overlays, which are changed manually. To increase the vocabulary available, some static devices have multiple levels, with different words appearing on different levels. Devices with voice output offer its user the advantage of more communicative power, including the ability to initiate conversation with communication partners who are at a distance. High-tech systems can also include Keyboard based solutions that do not require programming with a mix of flexibility, simplicity, and associated reliability. In this case, a keyboard and audio speaker are configured to be create a "talking keyboard" where typed text is spoken directly in an audio speaker. This allows any phrase to be spoken as it is typed using unlimited vocabulary text-to-speech conversion. One simple benefit is that a talking keyboard, when used with a standard telephone or speakerphone can enable a voice impaired individual have 2 way conversation over a telephone. In all cases of use, low tech systems often recommended as a backup in case of device failure. With low-tech devices, a communication partner is involved and must interpret the symbols chosen. Picture Communication Exchange System PECS is a commonly used low-tech communication system that teach individuals how to request, comment, and answer questions through the use of line drawings known as picture communication symbols PCS. LAMP Words for Life , a high-tech communication system, is an app that incorporates various symbols and motor planning. Symbols are placed in fixed position on the screen which allow users to develop motor patterns associated with certain requests or statements. Access and selection methods[ edit ] See also: Switch Access Scanning A subject uses eye-gaze to indicate choices on a transparent letter-based communication board. This is a form of "Direct Selection". Technological advances have dramatically increased the types of selection methods available for individuals with communication impairments. To accommodate motor control difficulties some users use alternative activation strategies; for example in "timed activation", the user maintains selection of the symbol for a predetermined period of time until it is recognized by the system. With the "release activation", the selection of the item is only made when the person releases contact from the display. When the desired message is reached, the AAC user indicates the choice using an alternative selection technique such as a switch , vocalization or gesture. It is often introduced first to children or beginning AAC users because it is the easiest to understand. In "linear scanning", items are organized in rows and are scanned one at a time until a choice is made. Although more demanding than circular scanning, it is still easy to learn. Finally, in "group-item scanning", items are grouped and the groups scanned consecutively. Once a particular group is selected, items within the group are scanned. One of the most common group-item strategies is row-column scanning in

## DOWNLOAD PDF ALTERNATIVE MODELS FOR DESCRIBING THE DEVELOPMENT OF CHILDRENS GRAPHIC WORK J.K. DUBOWSKI

which each row forms a group. The rows of items are scanned and when a row is selected, the items in the row are scanned one at a time until a message is selected. In "automatic scanning", the scan proceeds at a pre-determined speed and pattern until the user selects an item. In "inverse scanning", the switch is held down to advance the scan, and released to choose the desired item. In "step scanning", the AAC user activates one switch to move the indicator through the items, and another switch to select the item. Vocabulary organization refers to the way pictures, words, phrases, and sentences are displayed on the communication system. In the Fitzgerald Key organization, symbols from different semantic and syntactic classes are organized grammatically in groups from left to right to facilitate sentence construction. The fringe vocabulary "words and messages used more rarely and that are specific to an individual" appear on other pages. These are depictions of events, people, objects, and related actions in a picture, photograph, or virtual environment representing a situation, place, or specific experience. Objects and events within the photograph are then used as symbols for communication. Rate enhancement strategies Augmentative and alternative communication is typically much slower than speech, [62] with users generally producing 8-10 words per minute. There are two main options for increasing the rate of communication: For example, typing "HH" may retrieve "Hello, how are you? The user can then select the correct prediction without needing to write the full word. Word prediction software may determine the words predicted based on their frequency in language, association with other words, past choices of the user, or grammatical suitability. I drew one side of the letter. I drew half the other side I set my teeth so hard that I nearly pierced my lower lip. Shaky, with awkward, wobbly sides and a very uneven centre line I had done it! I had started "the thing that was to give my mind its chance of expressing itself. That one letter, scrawled on the floor with a broken bit of yellow chalk gripped between my toes, was my road to a new world, my key to mental freedom. The poet and author Christy Brown describes his communication breakthrough at 5 years in the book My Left Foot. For example, someone with spastic arm movements may require a key guard on top of the keyboard or touchscreen to reduce the selection of non-target items. These four purposes vary in terms of the relative importance of the content, rate, duration and the focus of the interaction. It is important that the AAC systems selected also reflect the priorities of the individual and their family. Operational competence involves the skills in the use and maintenance of the tool of communication, while social competence and strategic competence reflect knowledge and judgment in communicative interactions, including the compensations required for a slow speaking rate, communication breakdowns and those unfamiliar with AAC. These external characteristics may impact language learning opportunities. The most literate AAC users often report having access to abundant reading and writing material at home as well as in school during childhood. Despite the various barriers to employment, some AAC users achieve success in educational endeavours and employment, though often in lower paying jobs. Fine motor planning, control and coordination are often affected. Such individuals may require AAC support for communication. Approximately one half to one third have some degree of intellectual impairment, and visual and hearing problems are also common. Individuals with intellectual impairments face challenges in developing communication skills, including problems with generalization the transfer of learned skills into daily activities. They may lack communication opportunities in their daily lives, and responsive communicators who understand their communication methods. Typically there is particular difficulty acquiring expressive communication skills. A child with developmental verbal dyspraxia often experiences great amounts of frustration, so AAC can be a strategy to support communication alongside more traditional speech therapy to improve speech production. Manual signs have been shown to decrease errors in articulation. Individuals who do not recover natural speech to a degree sufficient to meet their communication needs typically suffer from severe impairments related to cognition. Communication boards are extremely functional and help patients with aphasia communicate their needs. Locked-in syndrome [edit ] Strokes that occur in the brainstem may cause profound deficits, including locked-in syndrome , [ ] in which cognitive, emotional and linguistic abilities remain intact but all or almost all voluntary motor abilities are lost. As eye movements are most likely to be preserved, eye blinks are frequently used for communication. Partner-assisted

## **DOWNLOAD PDF ALTERNATIVE MODELS FOR DESCRIBING THE DEVELOPMENT OF CHILDRENS GRAPHIC WORK J.K. DUBOWSKI**

scanning may be used, in which the AAC user signals when the desired letter is named by a communication partner. When vertical and horizontal eye movements are functional, a transparent alphabet board may be used in which the AAC user looks at the desired letter and this is acknowledged by the communication partner. In the later stages, AAC often becomes the main communicative method, although familiar conversation partners may still understand some spoken words. In the spinal form of ALS, the limbs are affected from the onset of the disease; in these cases a head mouse or eye tracking access may be used initially. Low-tech systems, such as eye gazing or partner assisted scanning, are used in situations when electronic devices are unavailable for example, during bathing and in the final stages of the disease. The individual may be taught to point to the first letter of each word they say on an alphabet board, leading to a reduced speech rate and visual cues for the listener to compensate for impaired articulation. Entire words can be spelled out if necessary. Visual impairments are common in MS and may necessitate approaches using auditory scanning systems, large-print text, or synthetic speech feedback that plays back words and letters as they are typed.

English-language words and phrases used by contemporary accounts to characterise the event include "massacres", "atrocities", "annihilation", "holocaust", "the murder of a nation", "race extermination" and "a crime against humanity". It happened to the Armenians, then after the Armenians Hitler took action. Concerned that Westerners would come to regard the "extermination of the Armenians" as "a black stain on the history of Islam, which the ages will not efface", El-Ghusein also observes that many Armenian converts were put to death. Armenians in the Ottoman Empire and Ottoman Armenian population Armenians under Ottoman rule The western portion of historical Armenia, known as Western Armenia , had come under Ottoman jurisdiction by the Peace of Amasya and was permanently divided from Eastern Armenia by the Treaty of Zuhab Armenians were mainly concentrated in the eastern provinces of the Ottoman Empire, although large communities were also found in the western provinces, as well as in the capital, Constantinople. The Armenian community was made up of three religious denominations: Under the millet system, the Armenian community was allowed to rule itself under its own system of governance with fairly little interference from the Ottoman government. The dhimmi system in the Ottoman Empire was largely based upon the Pact of Umar. The client status established the rights of the non-Muslims to property, livelihood and freedom of worship, but they were in essence treated as second-class citizens in the empire and referred to in Turkish as *gavours* , a pejorative word meaning " infidel " or "unbeliever". The clause of the Pact of Umar which prohibited non-Muslims from building new places of worship was historically imposed on some communities of the Ottoman Empire and ignored in other cases, at the discretion of local authorities. Although there were no laws mandating religious ghettos, this led to non-Muslim communities being clustered around existing houses of worship. Testimony against Muslims by Christians and Jews was inadmissible in courts of law wherein a Muslim could be punished; this meant that their testimony could only be considered in commercial cases. They were forbidden to carry weapons or ride atop horses and camels. Their houses could not overlook those of Muslims; and their religious practices were severely circumscribed, e. Armenians are labeled in blue. From to the declaration of a constitution in , the Ottoman government instituted the Tanzimat , a series of reforms designed to improve the status of minorities. By the late s, the Greeks , along with several other Christian nations in the Balkans , frustrated with their conditions, had, often with the help of the Entente powers , broken free of Ottoman rule. Led by intellectuals educated at European universities or American missionary schools in Turkey, Armenians began to question their second-class status and press for better treatment from their government. In one such instance, after amassing the signatures of peasants from Western Armenia, the Armenian Communal Council petitioned the Ottoman government to redress their principal grievances: The Ottoman government considered these grievances and promised to punish those responsible, but no meaningful steps to do so were ever taken. At the same time, the Armenian patriarch of Constantinople, Nerses II, forwarded Armenian complaints of widespread "forced land seizure In the wake of these events, Patriarch Nerses and his emissaries made repeated approaches to Russian leaders to urge the inclusion of a clause granting local self-government to the Armenians in the forthcoming Treaty of San Stefano , which was signed on 3 March The Russians were receptive and drew up the clause, but the Ottomans flatly rejected it during negotiations. On receiving a copy of the treaty, Britain promptly objected to it and particularly Article 16, which it saw as ceding too much influence to Russia. It immediately pushed for a congress of the great powers to be convened to discuss and revise the treaty, leading to the Congress of Berlin in Juneâ€”July Confined to the periphery, the delegation did its best to contact the representatives of the powers and argue the

## DOWNLOAD PDF ALTERNATIVE MODELS FOR DESCRIBING THE DEVELOPMENT OF CHILDRENS GRAPHIC WORK J.K. DUBOWSKI

case for Armenian administrative autonomy within the Ottoman Empire, but to little effect. Following an understanding reached with Ottoman representatives, Britain drew up an emasculated version of Article 16 to replace the original, a clause that retained the call for reforms, but omitted any reference to the Russian occupation, thereby dispensing with the principal guarantee of their implementation. Despite an ambiguous reference to Great Power supervision, the clause failed to offset the removal of the Russian guarantee with any tangible equivalent, thus leaving the timing and fate of the reforms to the discretion of the Sublime Porte.

Armenian national liberation movement Main article: Armenian national liberation movement Prospects for reforms faded rapidly following the signing of the Berlin treaty, as security conditions in the Armenian provinces went from bad to worse and abuses proliferated. Upset with this turn of events, a number of disillusioned Armenian intellectuals living in Europe and Russia decided to form political parties and societies dedicated to the betterment of their compatriots in the Ottoman Empire. In the last quarter of the 19th century, this movement came to be dominated by three parties: Ideological differences aside, all the parties had the common goal of achieving better social conditions for the Armenians of the Ottoman Empire through self-defense [53] and advocating increased European pressure on the Ottoman government to implement the promised reforms.

Hamidian massacres, " Main article: Hamidian massacres Corpses of massacred Armenians in Erzurum in In , Abdul Hamid created a paramilitary outfit known as the Hamidiye , which was mostly made up of Kurdish irregulars tasked to "deal with the Armenians as they wished". In some instances, Armenians successfully fought off the regiments and in brought the excesses to the attention of the Great Powers, who subsequently condemned the Porte. On 1 October , 2, Armenians assembled in Constantinople to petition for the implementation of the reforms, but Ottoman police units violently broke the rally up. Estimates differ on how many Armenians were killed, but European documentation of the pogroms , which became known as the Hamidian massacres , placed the figures at between , and , This incident brought further sympathy for Armenians in Europe and was lauded by the European and American press, which vilified Hamid and painted him as the "great assassin", "bloody Sultan", and " Abdul the Damned ". Prelude to the Genocide.
