Each stage is of a particular importance and cannot be omitted by the engineers and by those, who will virtually fulfill the elements of the project. The first, and perhaps the most important stage, is the agenda setting process. At this stage of the project the decision of policy implementation is taken, and the advantages and disadvantages of the program are carefully assessed. A significant number of professionals are usually implicated in this task in order to serve the needs of the community in the most efficient way. It is planned to fulfill this action in the half-year period starting from now. In other words the deadline for this project stage must be set for March, , providing that the policy scheme is approved by the local councils of the respective Indian cities and the necessary financing is provided by the local governments Healey, The second stage which is involved in the project fulfillment is the stage of policy formulation. In particular, one of the major aims under the provisions of this program is the purification of the main Indian rivers and other water reservoirs from the health detrimental chemical and physical elements Almorza, As far as other issues pertinent to the project are concerned, it is necessary to stress the importance of increasing forest and tree coverage and complete eradication of the waste dumps scattered across India Lemann, The third stage is the policy adoption. At this stage the polished and clearly formulated project is presented for consideration of the federal and local authorities, where the facilities are planned to be erected Jakab, Provided that their approval is obtained and, therefore, the project finance is provided, the teams of lawyers, engineers and other specialists may start the project. The fourth stage of the project is the policy implementation and the policy monitoring. In other words, at this stage the facilities and the object that have been planned during the previous stages are physically erected and the physical implementation of the project is permanently observed by the special department Healey, The erected facilities must entirely conform to the legal requirements of the federal and state laws of the federal Republic of India, as well as to the widely acknowledged international building standards and international ecology and environment standards Lemann, The fifth stage of the entire process is the ultimate evaluation of the implemented project and comparison of the results achieved with the goals that have been set at the first stage of the project Almorza, It is a well acknowledged fact that this process is no less important than the first stage, because, providing that the project was successful, the same projects can be implemented in the neighboring areas, in other states of India and in the neighboring states, where such policies have not been launched yet. The strategy Considering that the usefulness of the program is proven, specific goals should be designated in order to design a consecutive plan for the project fulfillment Jakab, Objectively, the following steps must be followed for effective fulfillment of the ultimate goal: First and foremost, the task of primary importance is to diminish the wastes dumped into the landfills and hereby to extent the landfills capacity 4. All possible measures shall be undertaken to diminish the negative environmental and ecological impact on the Indian community 4. The soil can be effectively fertilized by the natural elements, which are procured from them products of the combustion of natural and industrial wastes 4. The environmental awareness within the community must be considerably heightened, in order to enhance the public perception of the initiatives. All possible measures must be taken to ensure the maintenance of the project on the local levels Jakab, 4. If the effective solid waste management program is launched, the costs of transportation and energy should be provided in the upcoming future Jakab, Successful implementation of the program guarantees the creation of the numerous job places and the partial eradication of the unemployment rates in India. The projected outcome of the policy The aim of the policy is to ensure that upon the fulfillment of this project, the entire population of the individually chosen state must be permanently accessed to the potable water. This access must be of permanent character and cases of occasional contaminations of the

highly inflectional decesses must be removed permanently Healey, Another goal of the projected policy is that the areas, where the major Indian garbage dumps and landfills are located, must be liberated completely. The soil in the putrefied areas may be subsequently used for the agricultural needs, as well as for the building ones, considering the fact that India is one of the countries with highest population density in the world Almorza, The current state of affairs is that the garbage dumps and landfills are either dumped or combusted, thereby contaminating agricultural soils and potable waters. Unless an effective solid waste management program is launched, the entire Indian rural community will be on the verge of the ecological and environmental disaster. The method that is proposed in this research is considerably more expensive and labor consuming, but the ultimate results justify these expenditures. In this section of the proposal, a comparison between the existing waste management and the projected one is given and the advantages and disadvantages of the new method are outlined. Moreover, ecological and environmental concerns are not regarded as important ones, and regrettably, they are almost always out shadowed by the financial and political needs of the society. Nowadays, the waste is disposed the following way: Then, these wastes are accumulated on the gigantic landfills and either burnt or earthed. The average square of the landfill is about 21 square kilometers. The negative impact to the natural ambience of India and eventually to the physical and mental health of the inhabitants is tremendous: The Projected Method Although the projected method is highly expensive, the costs in question are completely justified by the projected ultimate outcome of the project. The first issue is that the garbage is classified into several containers. The one must be allocated for plastic wastes, the second for the glass ones, the third for the food leftovers, the one for the paper and the last one for the metal wastes Bridgman, The second step is the massive informational campaign among the population of India and the representatives of the business institutions, who must be mandated to dump their wastes in accordance with that classification. In order to ensure the proper dumping, heavy penalties must be applied on those, who decide to deviate from the waste management instructions. An effective tool does seem to be a termination of business licenses for the violation of the policy. The third step is the recycling process. The plastic wastes, the metal one are re-melted; the food leftovers are left for the process of the natural putrefaction. Paper remnants are recycled and new stacks of paper are manufactured as a result of this process. Existing landfills must be eradicated by the observance of the following algorithm: Naturally, the process involves a complex transport system and qualified professional who can guarantee the implementation of the policy. Ultimately, these methods will bring the reduction in the soil, water and air pollution together with the rise of the economy, because the need for the raw material will be diminished. As a result, the initially costly policy will help to economize a huge amount of financial resources for the economy of India, due to the fact that a significant percentage of the solid wastes will be converted into the raw materials Smith, Brownwyn, This section of the report reveals the character of the most fundamental participants of the process. The first group which is directly involved to the process is the federal and local authorities of India Lemann, The role of these institutions is the governmental observation and review of the project and conclusion on whether the project provisions fully correspond to Indian local, federal and international environmental and ecological mandatory requirements. And the ultimate goal of this project participant of is the project approval Jakab, When an approval is given, the next step is the procurement of financial resources for the project implementation. The second group is the hired employees who will be involved in the process. The future employees will be categorized into several groups. The first group will be the managerial group, in other words the professionals who will be responsible for providing effective governance. The second group will be qualified professionals, in particular engineers and qualified software developers, responsible for providing effective IT support of the project Almorza, Engineers are responsible for arranging proper calculations and projections. The third group is, in their majority, the manual workers, responsible for physical implementation of the project and erection of the facilities provided by the project. The third group of participants involves the volunteers. People, who will willingly participate in implementation of the project in question, is definitely one of the key elements in the project realization. Their task is to exercise the objectives which are allocated to the group of manual

workers, but who, for some reasons, for instance, lack of qualifications or finance, will not be able to cope with their tasks. Another goal of this group is to convey the message to the general public. The aim of this message is to ensure that the general public in their majority approves the initiatives conducted by the project team Healey. If the public does not approve the initiatives, the volunteers have to do their best in order to convince the public that the project is socially, ecologically and economically beneficial for the entire Indian community. The fourth group of stakeholders is private corporations involved in the process. First of all, the private corporations implement their social responsibility policies, contributing to the development of the solid waste management policy. Secondly, private institutions provide supplies and raw materials to arrange an effective launch of the project, acting as major project contractors. Moreover, the private companies and their affiliated institutions may perform as investors Almorza. Having invested financial resources to the project, they will ultimately obtain market opportunities to obtain state contracts for the maintenance of the facilities at hand. Among the major problems which urgently need to be resolved by the launch of this project are the following issues Colebathc, Environmental Degradation It is a widely acknowledged fact that improper treatments of industrial and natural wastes engender a great variety of dangerous prospective risks of the environmental and health-related character Healey,

Wrestling with Garth Post 4: In this essay he attempts to reclaim functional pottery from the critics who have dismissed it. Putting the Fun Back into Functional Pottery I am a maker of mugs, pitchers and plates, among other things. I do not want to make non-functional pots; I tried it once and I did not like it, neither the process nor the outcome. I am neither a ceramic artist nor a sculptor: I am a potter and I am proud. My pots are expressions of my individuality; they illuminate the world; they rage against it; they fascinate me with their myriad details. My reasons for making pots are complicated and keep changing, but make them I do, and make them I will. My soul is at stake each time I squeeze eloquence out of dirt. My mug is worth every penny of the asking price, though I would be quite willing to give half of the money to whomever sells it. My mugs are valuable beyond their monetary worth, because people tell me so - one customer even said that one of my mugs saved her life. She is sick and takes pills daily to keep her alive, and she sips water from my mug to swallow down her medicine. Other testimonials are equally moving. It is a direct and simple reward to know my aesthetic has touched her life. I know I am not the only contemporary functional potter who has experienced this. Because of this intimacy, we let our guard down around pots, allowing them to convey ideas about aesthetics, function, and social issues. Through repeated use, pots can become habit-forming and comforting, creating memory for those using the pots. They are objects of service and conduits between people. These pots are independent of me; they are finding their own way and accumulating histories with various people, in various homes, in various places around the world. Yes, I think they do. They illustrate the role functional pots play in our culture. It is important that we aspire to the highest standards, but it is not necessary to wait for positive criticism before recognizing the value of what we do. I make pots to please myself; I love making pots. I am responsible for my work, and, with my wife Carol, who is my business partner, we are responsible for our economic wellbeing. I make pots because I want to, and any extra attention I get for doing so is a dividend, not a goal. Historically, the world of ceramics has been divided into different and often rival camps. There are the divisions between Imperial ceramics and folk ceramics, between industrial and handmade, between brown pots and white pots, between functional pottery and ceramic sculpture, between old and new, between the academy and the marketplace, and, heaven help us, between art and craft. The debate can be educational and quite entertaining if not taken too personally. It can also be maddeningly acrimonious and bitterly divisive, as people jockey for money, power and status, and, wittingly or unwittingly, knife their fellow potters and ceramic artists in the back. Mistrust and incomprehension habitually lie between the tastes of a libertine and an ascetic, and, sadly, these rivalries between ceramic camps frequently prevent excellence from being acknowledged. What connects us all is quality, and that is what potters and ceramic artists work toward, and what good pottery criticism encourages. The debate between functional pottery and the Post-Modern camp took a serious turn for the worse during the unfortunate argument between Garth Clark and Warren Mackenzie several years ago. This sad episode had the effect of intimidating the voice of functional potters for several gloomy years we tend to be a shy lot, preferring the sanctuary of our workshops to the thrust-and-parry of conferences and criticism. But we did not stop making pots - we merely went underground, trying new things, welcoming many new voices into our midst, until an even larger and more colorful rainbow of styles of functional pottery emerged. This, for me, marked the beginning of the Neo-Functional Movement. The Utilitarian Clay Symposia at Arrowmont highlight the superb talents and differing approaches of many leading contemporary practitioners. Functional potters in the U. His lavish monographs, handsome exhibitions, and attentive patronage have cultivated connoisseurship, generated strong sales, and put these veterans back in the spotlight. devolved market. Some Neo-Functional pots made today are traditional, some have emerged from art schools, and some are design-based. Within each of these approaches, potters have developed recognizable personal styles; each craftsman, each artist has a distinct voice. Individual expression, repetition, and refinement create our individual styles, whether we are functional potters or sculptural artists, and once we have found our mature voices, we improvise like jazz musicians on songs we already know - modifying, exploring, and innovating as we go. It matters less what the subject matter is, and more that your voice rings true, your skills are honed, your passions alive. All art has to be made, so, in a sense, all art is performed, whether design- or tradition-based. For instance, I might decide to make mugs in a day, endowing each one with all my knowledge, passion, and talent, allowing my voice to resound in each one. Indeed each mug is an idea, a symphony and a performance; in making them, I am theoretician, composer and virtuoso. Pots themselves can be performers in their own right: Pots are not music, nor poems, nor painting, nor sculpture, but they can be equally engaging. By extension, potters too are entertainers, having a place in communities across the country that is a step or two outside the mainstream, where they are more independent. We hold collective creative dreams in our hands, fighting against the forces of uniformity, providing insight, hope, and reverie. Some contemporary potters, myself included, choose to make pottery that is in some way connected to regional traditions. What is the continuing appeal of these folk pots? That performance had the weight of the whole world in it. I listened to it a hundred times and never got tired of it. You can refute Hegel, Yeats said, but not the Song of Sixpence. Its simplicity, however, is deceptive. Traditionally-inspired pots are a continuity remembered and myths newly minted. Like landscape paintings, they reflect the character of a region; in evoking history, they guide us to the heart of a culture. I enjoy being part of a regional, performance-based tradition. My work is part of a venerable heritage but is also new and fresh. By grafting North Carolina traditions to what I learned as an apprentice with Michael Cardew in England, I produce wares that have a regional aesthetic as well as a contemporary sensibility. My Iced Tea Ceremony Vessels for instance, are a counterpoint to the Japanese Tea Ceremony, and combine both the North Carolina alkaline glaze and the salt glaze traditions on the same pot. They are also alive with contemporary ceramic references: These tall tumblers are good to look at, think about, and use. Sometimes I like my pots to be spare and minimal, sometimes elaborately ornamented. I am not root-bound, but choose to use these healthy Carolinian traditions as the rootstock for my own hybrid growth. I also gladly acknowledge that traditional pots are but one part of the ceramic spectrum. The aesthetic and technical qualifications for excellence within such traditions are too high to be brusquely dismissed. King, Tony Rice, or Doc Watson be quarantined, or silenced? There is, of course, a pejorative sense accompanying the word fundamentalist, now often connected with radical religious fundamentalists who are blinkered by a strictly maintained set of orthodox religious beliefs. I too view my work as a humanistic, even moral, protest against an unjust world, though at times it serves as a buffer against it. Many potters care about natural materials, finely-tuned aspects of functionality, and have a romantic sensibility about the role of functional pots in daily life, but does that mean we should be branded as fundamentalists? All parts of the ceramic community could claim to be fundamental, but for the sake of argument, if, as a functional potter, I think of myself as part of the foundation of the house of ceramics, then I have no problem with what I support - a colorfully decorated interior, a flamboyant finial ornamenting a cornice, or an interesting roof line made of new, exquisitely engineered materials. We live in the house together and it is big enough for us all. Foundations are not always buried, however, and we functional potters are often decorated and playful, and enjoy our own days in the sun. I know my family would miss me, and my friends, community and customers too! Functional pottery is an acknowledged part of American cultural life. We potters address ceramic history and finesse it in individual ways. We are always trying to make better, more intelligent, more inspired pots. We would all like to make a little more money, work a little less; and gain recognition for our work. Each of our voices and spirits is unique; we are independent operators fighting for our livelihoods in a highly competitive market. The more I thought about the actual reality of contemporary functional pottery, the sadder I became that this vibrant and exciting world is still described by

such a dull and out-of-date phrase, and is often portrayed by an inaccurate and demeaning set of stereotypes. Words matter, phrases and descriptions enter our consciousnesses and create, or trigger, prejudices that are difficult to shake. But give a group a new name and its image changes. Re-label and re-identify an activity and, beyond mere spin, it is possible to look at that activity with new eyes. Often these pots are used for their obvious purpose a mug holds liquid you drink, and so forth, but they are also used decoratively to ornament a home or garden. Usually they serve both purposes. Although the approach I am taking is deliberately light-hearted, its purpose is far from flippant. These categories are fabrications, and my intent is to enlighten and amuse rather than cause offense. In any case, the list is incomplete and I encourage readers to add their own new categories. The process to follow. The process of incorporating the policy in question contains five integral stages. Each stage is of a particular importance and cannot be omitted by the engineers and by those, who will virtually fulfill the elements of the project.

The original heathland was much bigger than it is today, covering several thousand acres and stretching from Norwich to Woodbastwick, South Walsham and the Norfolk Broads. The land was crossed by several public rights of way and was therefore an environment that many experienced as they moved through it. It was not a prosperous or productive landscape, being used primarily for sheep rearing, as well as offering grazing for cattle, sand and gravel extraction, and marl- and chalk-pits. The herds of cattle and sheep pastured on the heath were well known and not just to Norwich citizens. Successive acts of Parliament saw the enclosure of some 6. In the s calls were made to enclose Mousehold Heath, many of them by landowners on adjacent properties who wished to extend their existing agricultural holdings or to create new landscape settings for their villas. As the art historian Trevor Fawcett has shown, throughout the s and s the possibility of improving it was actively debated in Norwich. Within the ideology of mercantile capitalism only the hard working, whether land or families, were seen to make a proper contribution to the commonweal. The physical transformation and reduction of Mousehold Heath can be perceived by comparing how it appears in two surveys: Those who had the most to lose from the enclosing of Mousehold Heath, namely the rural poor who relied on it for sustenance and support, have left no record of their feelings and it might be supposed that only they would have protested at its loss. However, the heathland also appealed to many precisely because it had for so long been an integral part of the local landscape and in its untouched state offered the possibility of recreation away from the city and, for some, deep communion with nature. And are all thy charms no more, The fragrant thyme, the lightly-pendant bell? To the warm south a little spot is chose For savory herbs and vegetable store: Then let us to the hand of Culture yield The barren beauty of the dusty plain; Forget the wild heath in the fruitful field, And welcome Harvest to his golden reign. Pollution , we hear it every other day at school, college and read about it in newspapers. So what is it? Pollution occurs when pollutants contaminate the natural surroundings; which brings about changes that affect our normal lifestyles adversely. Pollutants are the key elements or components of pollution which are generally waste materials of different forms. Pollution disturbs our ecosystem and the balance in the environment. With modernization and development in our lives pollution has reached its peak; giving rise to global warming and human illness. Every form of pollution has two sources of occurrence; the point and the non-point sources. The point sources are easy to identify, monitor and control, whereas the non-point sources are hard to control. Let us discuss the different types of pollutions, their causes and effects on mankind and the environment as a whole. It occurs due to many reasons. Excessive burning of fuel which is a necessity of our daily lives for cooking, driving and other industrial activities; releases a huge amount of chemical substances in the air everyday; these pollute the air. Smoke from chimneys, factories, vehicles or burning of wood basically occurs due to coal burning; this releases sulphur dioxide into the air making it toxic. The effects of air pollution are evident too. Release of sulphur dioxide and hazardous gases into the air causes global warming and acid rain; which in turn have increased temperatures, erratic rains and droughts worldwide; making it tough for the animals to survive. We breathe in every polluted particle from the air; result is increase in asthma and cancer in the lungs. Water Pollution has taken toll of all the surviving species of the earth. It occurs due to several factors; the industrial wastes dumped into the rivers and other water bodies cause an imbalance in the water leading to its severe contamination and death of aquatic species. If you suspect that nearby water sources have been contaminated by a corporation then it might be a good idea to hire an expert to see your options. Also spraying insecticides, pesticides like DDT on plants pollutes the ground water system and oil spills in the oceans have caused irreparable damage to the water bodies. Eutrophication is another big source; it occurs due to daily activities like washing clothes, utensils near lakes, ponds or rivers; this forces detergents to go into water which blocks sunlight from penetrating, thus reducing oxygen and making it inhabitable. Water pollution not only harms the aquatic beings but it also contaminates the entire food chain by severely affecting humans dependent on these. Water-borne diseases like cholera, diarrhoea have also increased in all places. Soil pollution occurs due to incorporation of unwanted chemicals in the soil due to human activities. Use of insecticides and pesticides absorbs the nitrogen compounds from the soil making it unfit for plants to derive nutrition from. Release of industrial waste, mining and deforestation also exploits the soil. Noise pollution is caused when noise which is an unpleasant sound affects our ears and leads to psychological problems like stress, hypertension, hearing impairment, etc. It is caused by machines in industries, loud music, etc. Radioactive pollution is highly dangerous when it occurs. It can occur due to nuclear plant malfunctions, improper nuclear waste disposal, accidents, etc. It causes cancer, infertility, blindness, defects at the time of birth; can sterilise soil and affect air and water. Light pollution occurs due to prominent excess illumination of an area. It is largely visible in big cities, on advertising boards and billboards, in sports or entertainment events at the night. In residential areas the lives of the inhabitants is greatly affected by this. It also affects the astronomical observations and activities by making the stars almost invisible. Effects of Pollution 1. Environment is the first casualty for increase in pollution weather in air or water. The increase in the amount of CO₂ in the atmosphere leads to smog which can restrict sunlight from reaching the earth. Thus, preventing plants in the process of photosynthesis. Gases like Sulfur dioxide and nitrogen oxide can cause acid rain. Water pollution in terms of Oil spill may lead to death of several wildlife species. The decrease in quality of air leads to several respiratory problems including asthma or lung cancer. Water pollution occurs due to contamination of water and may pose skin related problems including skin

irritations and rashes. Similarly, Noise pollution leads to hearing loss, stress and sleep disturbance. The emission of greenhouse gases particularly CO₂ is leading to global warming. Every other day new industries are being set up, new vehicles come on roads and trees are cut to make way for new homes. All of them, in direct or indirect way lead to increase in CO₂ in the environment. The increase in CO₂ leads to melting of polar ice caps which increases the sea level and pose danger for the people living near coastal areas. Ozone layer is the thin shield high up in the sky that stops ultra violet rays from reaching the earth. As a result of human activities, chemicals, such as chlorofluorocarbons CFCs , were released into the atmosphere which contributed to the depletion of ozone layer. Due to constant use of insecticides and pesticides, the soil may become infertile. Plants may not be able to grow properly. Various forms of chemicals produced from industrial waste is released into the flowing water which also affects the quality of soil. Pollution not only affect humans by destroying their respiratory, cardiovascular and neurological systems; it also affects the nature, plants, fruits, vegetables, rivers, ponds, forests, animals, etc, on which they are highly dependent for survival. It is crucial to control pollution as the nature, wildlife and human life are precious gifts to the mankind.

At the same time, it is better to pass by argumentative essay topics connected with religion, gender, race, and other sensitive episodes of human life. Otherwise, your subjective opinion may be graded subjectively.

How to Write In the world of academics, one of the most familiar things that happen is students getting new assignments that come in all types. This, in turn, makes getting lost in all the guidelines and rules a common occurrence among students. One of the many tasks that students fall victim to in such a manner is an article critique. What Is a Critique? The critiques are not regular types of tasks, and they come with specific content and structure requirements. If you are interested in learning the best ways to write an article critique, this is the first principle that you should grasp to have a vivid understanding of the dynamics behind critiquing an article. It is also important to note that as you give your thoughts, you are supposed to back them up with credible information and facts. Your chief objective is to showcase your individual opinion on the article through the use of arguments and evidence. This calls for being very keen as you read the article and note down its essential elements. This is because they tend to only provide summaries of the articles they have analyzed without including a personal approach while also challenging their knowledge and skills. This is one of the main reasons as to why there are myriads of mistakes that are made by students when writing article critiques. Some of the mistakes that students often make due to the lack of knowledge what is a critique include: Using only the negative type of critique One of the most important aspects that you should consider when learning how to write a critique is balancing between the negative and positive remarks on the article at hand. Even though your chief aim is analyzing the article, ensure that you add some positive points for your overall impression of the paper to be diluted. Writing excessive background information A good number of your readers are already aware of the topic of the article, as well as the personal information about its author. Leaving out the main argument A good number of students usually forget about including this vital element and instead try to summarize the entire article. What they do not understand is that the main argument is a pivotal point in how to critique a research article. It should be included at the start of your work so that all your readers have a means to know what your stand on the subject in question is. How to Format and Write Your Critique Essay It is important to note that the majority of professors usually pay keen attention to the formatting. This is the reason as to why you should be both attentive and careful when designing your work and making your final touches. Each of them has its specific guidelines and rules, and it goes without saying that failure to follow them could lead to your paper getting low grades. In our example of how to critique a research article, we will use the format recommended by most professors around the globe, and this format is the APA. The format requires your paper to consist of double-spaced content with the Times New Roman font at 12 points and 1-inch paper margins. Ensure that you have indicated the name of your school and paper alongside your personal information when it comes to formatting your title page. Once you have completed this hurdle, you can move on to the APA format for an article critique as shown below: In the process, always include the analysis methods that you incorporated when writing it. The abstract should have around 15 to words. Also, add the methods you used to analyze the content. In your essay body, ensure that you tackle the following sectors: It is also essential to include your perception of the critique essay main idea to relay to the readers what it is communicating. In addition to this, make sure that you highlight how the article critique example can be applied in its field of study. Explain how you think this article review example will compare with its contemporaries and also in research. Your assessment should include the issues that the article review example raises as well as the ones that it avoids but you think should have been included. It is essential for you to note that when writing this APA format article critique, you are tasked with engaging with it instead of merely summarizing it. Ensure that you review the article format as well as the content and view it from all possible angles to see to it that every piece of detail adds up. In a nutshell, when learning how to critique an article, you should always be objective in what you do. Make sure that your APA format article critique

receives all the support that you can find in official sources and support it using objective evidence instead of emotions. Once you have done this, you should ensure that you add a reference section whereby you list all the sources that you used in your article critique. It is of importance for you to cite these sources according to the APA style of academic formatting unless your professor indicates that you should use a different formatting style.

The soiled wastes ate hospital wastes that includes blood soiled clothes and other clothes soiled by other body fluids. The toxic and the soiled trash must be disposed of properly and under guidance. These are most harmful to men.

The essay is used as a form of assessment in many academic disciplines, and is used in both coursework and exams. It is the most common focus for study consultations among students using Learning Development. These lists suggest questions to ask of your writing when you are reviewing it. To produce a high quality essay you need to demonstrate your ability: The need to use such a wide range of academic skills is probably the main reason why the essay format is so popular with tutors as an assignment. The word limit adds to the challenge by requiring that all of these skills be demonstrated within a relatively small number of words. Producing incisive and clear written work within a word limit is an important skill in itself, which will be useful in many aspects of life beyond university. Feedback Good, constructively critical feedback can give you excellent guidance on how to improve your essay writing. It is worth attending to all of the suggestions and comments you receive, and trying to act on them. Common criticism given to students is that their essay: These criticisms highlight the three basic elements of good essay writing: These elements will be used to give a broad overall structure to this Study Guide. Attending closely to the title The most important starting point is to listen carefully to what the essay title is telling you. You need to read every single word of it, and to squeeze out as much guidance you can from the title. Then you need to plan how you will respond to every single element of the title. The guidance given to you by the title is freely available, and is your best clue to what is required in your essay. As a tutor has said Creme and Lea, p One, answer the question. Two, answer the question. Three, answer the question. Essay terms explained , and Questions to ask about interpreting essay titles may be useful. It can be a way of making a lot of progress quite quickly. It can be stressful and very difficult trying to work out solely in your mind how to tackle an essay title; asking yourself questions such as: What structure should I use? What are my main points? What reading do I need to do? Have I got enough evidence? It can be much less stressful to throw all your thoughts down on paper, before you start trying to find answers to these questions. In these early stages of your thinking you may not be sure which of your ideas you want to follow up and which you will be discarding. Instead, you can catch all of your ideas, in no particular order, on a sheet or two of A4. Once they are down there it will be easier for you to start to review them critically and to see where you need to focus your reading and note taking. Breaking it down then building it up Essentially, this is what you are doing within the essay process: Throughout this process, the essay title is the single immovable feature. You begin there; you end there; and everything in between needs to be placed in relation to that title. Efficient reading All three of the processes described above will inform your decisions about what you need to read for a particular essay. If left unplanned, the reading stage can swallow up huge amounts of time. Fortunately, there is scope for developing efficiency in several ways: While a certain level of efficiency is desirable, it is also important to remain flexible enough to identify relevant and interesting ideas that you had not anticipated. Writing as thinking You can use the writing process to help you think through, clarify and develop your early ideas about how you might respond to the title that has been set: As with teaching, it is often not until you try to communicate an argument and its evidence that you find where the gaps are in your knowledge or argument. Writing is an active and constructive process; it is not merely a neutral recording of your thoughts. It is therefore useful to go into the writing process expecting to make revisions. The first words you write do not have to be part of the final version. Editing your writing as you develop your ideas is a positive not a negative process: Establishing a relevant structure to support your argument All essays need structure. The structure may be strong and clear, or it may be unobtrusive and minimal but, in a good essay, it will be there. Again this may be strong and obvious, or it may be almost invisible, but it needs to be there. However, even in those essays that appear to be highly creative, unscientific, or personal, an argument of some kind is being made. It is the argument, and how you decide to present and

back up your argument, that will influence your decision on how to structure your essay. The essay structure is not an end in itself, but a means to an end: By creating a relevant structure, you make it much easier for yourself to present an effective argument. There are several generic structures that can help you start to think about your essay structure e. These can be useful starting points, but you will probably decide to work with a more complicated structure e. In addition to these macro-structures you will probably need to establish a micro-structure relating to the particular elements you need to focus on e. Fluid structures You may feel that, for your particular essay, structures like these feel too rigid. You may wish to create a more flexible or fluid structure. An analogy could be that of symphony writing. This set out a pattern for the numbers of movements within the symphony, and for the general structure of writing within each movement. The continued popularity of their work today shows that they clearly managed to achieve plenty of interest and variety within that basic structure. Later composers moved away from strict symphonic form. Some retained a loose link to it while others abandoned it completely, in favour of more fluid patterns. It would be rare, however, to find a symphony that was without structure or pattern of any kind; it would probably not be satisfactory either to play or to listen to. Similarly, a structure of some kind is probably essential for every essay, however revolutionary. Your decisions on structure will be based on a combination of: An iterative, not necessarily a linear process The process of essay planning and writing does not need to be a linear process, where each stage is done only once. It is often an iterative process i. A possible iterative process is: Barass p80 makes the simple but valid statement, that: They will be reading and marking many, many student essays. If you make your argument hard to follow, so that they need to re-read a paragraph or more to try to make sense of what you have written, you will cause irritation, and make their job slower. Realistically, it is possible that they may even decide not to make that effort. Your tutors will not necessarily be looking for the perfect, revolutionary, unique, special essay; they would be very happy to read a reasonably well-planned, well-argued and well-written essay. They will not want to pull your essay to pieces. They would much rather enjoy reading it, and be satisfied by the thread of your argument. In the words of a tutor: It can engage your readers, and can give them confidence that you have thought carefully about the title, and about how you are going to address it. A useful generic structure is to: It may be possible to use only one paragraph for your introduction, but it may fall more easily into two or more. You will need to adapt and extend this basic structure to fit with your own discipline and the precise task set. Here is an example of an introduction for an essay entitled: Examine and compare the nature and development of the tragic figures of Macbeth and Dr Faustus in their respective plays. Begin with a general point Dr Faustus and Macbeth are both plays that show their respective playwrights at the pinnacle of their careers. The heart of the essay The middle part of the essay must fulfil the promises made in your introduction, and must support your final conclusions. Failure to meet either or both of these requirements will irritate your reader, and will demonstrate a lack of self-critique and of editing. The central part of your essay is where the structure needs to do its work, however explicit or implicit your chosen structure may be. The structure you choose needs to be one that will be most helpful to you in addressing the essay title. The content of this central part will probably contain: It will be characterised by: Questions to ask of your essay content may be useful. Conclusion A powerful conclusion is a valuable tool. The aim is to leave your reader feeling that you have done a good job. A generic structure that you may find useful is: The example below relates to the essay title used on the previous page. Brief recap The characters of Macbeth and Faustus are very similar in many respects; for example they both willingly follow a path that leads to their damnation. Evaluation of the main arguments As has been shown, the character of Macbeth has a nadir from which he ascends at the conclusion of the play. For Faustus however, there is no such ascension. This fits with the style of the morality play: Questions to ask of your introduction and conclusion may be useful. The study guide What is critical writing?
