Meet the Author This bestseller is known for its modern, practical approach to regression-analysis methods that students will find applicable to real-life problems. The authors continue to emphasize model development, the intuitive logic and assumptions that underlie the techniques covered, the purposes, advantages, and disadvantages of the techniques, and valid interpretations of those techniques. Table of Contents 1. Overlapping of Classification Schemes. Random Variables and Distributions. Error Rate, Power, and Sample Size. Statistical versus Deterministic Models. Regression with a Single Independent Variable. Mathematical Properties of a Straight Line. Statistical Assumptions for a Straight-line Model. Determining the Best-fitting Straight Line. Inferences About the Slope and Intercept. Interpretations of Tests for Slope and Intercept. Prediction of a New Value of Y at X0. The Bivariate Normal Distribution. What r Does Not Measure. Testing for the Equality of Two Correlations. Graphical Look at the Problem. Assumptions of Multiple Regression. Test for Significant Overall Regression. Multiple Partial F Test. Strategies for Using Partial F Tests. Tests Involving the Intercept. Alternative Representation of the Regression Model. Rule for Defining Dummy Variables. Comparing Two Straight-line Regression Equations: Questions for Comparing Two Straight Lines. Methods of Comparing Two Straight Lines. Comparison of Methods I and II. Testing Strategies and Interpretation: Comparing Two Straight Lines. Other Dummy Variable Models. Comparing Four Regression Equations. Several Groups and Several Covariates. Simple Approaches to Diagnosing Problems in Data. Detecting Outliers and Violations of Model Assumptions. Least-squares Procedure for Fitting a Parabola. Inferences Associated with Second-order Polynomial Regression. Example Requiring a Second-order Model. Fitting and Testing Higher-order Model. Strategies for Choosing a Polynomial Model. Steps in Selecting the Best Regression Equation. Specifying the Maximum Model. Specifying a Criterion for Selecting a Model. Specifying a Strategy for Selecting Variables. Evaluating Reliability with Split Samples. Example Analysis of Actual Data. Issues in Selecting the Most Valid Model. The Problem, Assumptions, and Data Configuration. Equivalent Analysis of a Matched-pairs Experiment. Analysis of a Randomized-blocks Experiment. Models for a Randomized-blocks Experiment. Using a Table of Cell Means. Problem with Unequal Cell Numbers: The Principle of Maximum Likelihood. Statistical Inference Using Maximum Likelihood. A Numerical Example of Logistic Regression. Why Not Use Binary Regression? An Example of Polytomous Logistic Regression: One Predictor, Three Outcome Categories. A "Simple" Hypothetical Example: Example of Poisson Regression. Measures of Goodness of Fit. Continuation of Skin Cancer Data Example. General Linear Mixed Model Approach. Recommendations about Choice of Correlation Structure. Analysis of Data for Discrete Outcomes. Sample Size Planning for Linear Regression. Sample Size Planning for Logistic Regression. Practical Considerations and Cautions.
