Chapter 1 : calendrierdelascience.comment & Rubrics/Reading

1 A Roadmap to This Book2 Teaching and Assessing Classroom Behavior, Work Habits, and Cooperative Group Learning Skills3 Teaching and Assessing Reading Comprehension Through Teacher-Led Discussions in Various Types of Reading Groups4 Teaching and Assessing Reading Comprehension of Fiction Through Drawing5 Teaching and Assessing Reading.

SEDL Reading Resources Accurate identification of children who experience delays in attaining critical early literacy skills is needed to prevent reading problems. Studies have demonstrated that reading problems become increasingly more resistant to intervention and treatment after the 3rd grade. Given this, early literacy screening of young children for potential problems with beginning literacy skills is particularly important and serves a variety of purposes. The appropriate time to begin screening young children has been debated. In some cases the literature argues that for young children, screening of early literacy skills should occur before formal literacy instruction begins Badian, , ; Invernizzi et al. The belief underpinning this stance is that the prevention of reading problems can only be realized if early literacy skills are assessed before children become immersed in the mechanics of formal literacy instruction Justice et al. In other cases, researchers have stated that screening in preschool, the summer prior to entrance in kindergarten, or at the beginning of kindergarten is likely to reduce the predictive accuracy of a screening instrument for two reasons: However, failing to identify young children exhibiting delays in early literacy acquisition or lacking core literacy skills is a risky venture. The use of accurate, valid, and reliable screening tools several times throughout the early years can only help in the identification of those in need of monitoring, further intervention, or remediation. An early literacy screening tool for preschool- and kindergarten-age children needs to meet several important criteria: The ability of a screening measure to accurately classify or identify students as at risk or not at risk for poor reading outcomes is a key component of the measure. Therefore, sensitivity accuracy in identifying at risk students who in fact later perform poorly on a future measure and specificity accuracy in identifying not at risk students who later perform positively on a measure are key aspects to consider in evaluating the validity and reliability of a screening measure for identifying students who are at risk for later reading problems. Evaluating the classification accuracy of early reading measures is complicated by the fact that many examiner manuals fail to include information about predictive validity, or classification accuracy Rathvon, This is a challenge we faced with this overview. Even when manuals and technical reports provided data from predictive validation studies, typically only correlation coefficients were presented as evidence. The assessments reviewed for this overview report correlation coefficients for scores on a criterion measure or between Time 1 and Time 2 administration of the assessment. Sensitivity and specificity were not explicitly reported in the examiner manuals or technical reports reviewed. This is a limitation, in that the relationship between the screener and criterion measure does not provide the ability of the assessment to correctly classify individual children. Table 1 provides info on a few widely used tools for preschool and kindergarten children and reports the predictive validity and criterion measure used, as well as the skills assessed. Many of the assessments that did report predictive validity for preschoolers used the kindergarten level of the same assessment for its criterion measure. This exercise of using the same assessment for predictive validity only provides information on how a student will perform on this particular assessment, not necessarily predicting future reading outcomes. Caution is suggested for using assessments without adequate predictive validity i.

ASSESSING AND TEACHING READING COMP. AND PRE-WRITING, , Vol. 3 (Assessing & Teaching: Reading Comprehension & Pre-Writing) Paperback - May 29,

This is the best level for learning new vocabulary. It requires the assistance of a teacher or tutor. This is where the best progress is made in reading. Children who are forced or permitted to attempt reading beyond the 5-word error limit soon begin to feel frustration when in an instructional setting. This is too hard for the reader. Word errors are over 10 per running words of text. Comprehension questions are below 70 percent accuracy. It is, however, all too often observed in the classrooms of well-meaning teachers. If football was run by the education system If football was handled by the same rules as education, it might look like this†…. All teams must make the state playoffs and all MUST win the championship. If a team does not win the championship, they will be on probation until they are the champions, and coaches will be held accountable. If after two years they have not won the championship their footballs and equipment will be taken away UNTIL they do win the championship. All kids will be expected to have the same football skills at the same time, even if they do not have the same conditions or opportunities to practice on their own. NO exceptions will be made for lack of interest in football, a desire to perform athletically, or genetic abilities or disabilities of themselves or their parents. Talented players will be asked to workout on their own, without instruction. Games will be played year round, but statistics will only be kept in the 4th, 8th, and 11th game. This will create a New Age of Sports where every school is expected to have the same level of talent and all teams will reach the same minimum goals. Internet, Author unknown Ms. However, performance tasks such as a writing activity, story retelling, oral presentation, or other projects can be assessed effectively using a rubric. Rubrics are scoring guides based on specific criteria for quality work.
