Lowry The late Dr. Lowry was best known as a Professor of biometeorology and climatology, and author of several definitive articles and textbooks on these and related subjects. Lowry joined an interdisciplinary team of teachers and researchers under the guidance of Prof. Lowry retired and returned to Oregon in , where he wrote and worked as a consulting meteorologist. Click here for Dr. Around the time of the first Earth Day in he contributed several booklets and articles on the subject of air pollution meteorology, and after his work for METROMEX and a professional visit to Hungary in the early 80s, he authored and co-authored a series of articles on urban temperature and precipitation. Eventually these culminated in an important review article, "Urban Effects on Precipitation Amount," published in in the British journal Progress in Physical Geography. See below for citations of selected publications. Lowry produced two substantial textbooks. The first, entitled Atmospheric Ecology for Designers and Planners , was based on his interdisciplinary experiences at the University of Pennsylvania. The second textbook, a two-volume work entitled Fundamentals of Biometeorology, coauthored with his elder son, expands on the earlier Weather and Life to present the full sweep of the subject and stands to become a classic textbook in the field. Proceeds from the sale of these books will be contributed to the William P. Lowry Memorial Fund , established to help support graduate research in biometeorology. Apart from his professional projects, in which he maintained a passionate involvement until the end of his life, Dr. Lowry contributed frequently to causes including environmental awareness, civil liberty, civil rights, and human rights, as well as to his community and the lives of his many friends. In retirement, he worked with numerous local arts, political, and community organizations, spearheading several of them. He had a powerful interest in politics, history, geography, and people; a strong moral compass; and a commitment to integrity and to action. Lowry and Porter P.
