DOWNLOAD PDF BEGINNERS GUIDE TO WINDOWS 10

Chapter 1 : Windows 10 user guide PDF and manual

Windows 10 is the most powerful operating system that Microsoft has ever made, but it's also the most complex. While the user interface is extremely intuitive, you'll have to dig a little deeper.

Conclusion Windows 10 Initial setup When you first install or turn on a brand new Windows 10 computer the first thing you have to do is setup a user account with a password. Microsoft also emphasize and almost make it seem required to use a Microsoft account, but you can still skip that step and use a local account instead: After you create the account, you will be presented with a Settings option. There is a lot of things to toggle under the customization settings, but most are self explanatory. After you are done customizing your privacy settings, then your desktop will load. After going through all those hoops, the default Windows 10 desktop will load. Click on the Check for update button and wait until all updates are installed. Reboot the computer when it prompts you to. One a little nagging thing I find on Windows 10 is that updates are pushed automatically any time, and most of the times the computer restarts automatically when you are not using it. And choose the hours you install the updates and reboot the computer: Antivirus and other software installation If you have or are planning to purchase an Antivirus now is the time to do it. Windows 10 already comes with an Antivirus if you only do normal browsing on your computer, then the built-in Antivirus should be fine, just make sure is enabled and updated. If you only do light document editing on your computer give Libre Office a try. Is a nice way of saving in Office annual subscriptions. Once you are done installing all the software you need or you can think of at this point run the update check again, and install all Office and other non Microsoft updates that might come up. Customizing the start menu After your computer is updated and all the software you need is installed, maybe is time to personalize your computer a bit. Unfortunately there is no way to remove all the icons at once so you have to do it one by one. To add icons to your Start menu, just Right-click the icon of the application you want to add to the Start Menu, and choose Pin to Start: You can resize the Menu if it looks too crowded after adding too many icons. Changing wallpapers and theme color To change wallpapers click on the Settings icon on the Start menu, then Personalization and then Backgrounds if you want to use a custom wallpaper, click on Browse and choose your wallpaper: Hiding Cortana and the Taskview button By default Windows 10 comes with the Cortana search box on the taskbar. I find it a little annoying because I never use it. If you would rather have File Explorer open your to your Drives, Documents, etc. Conclusion Windows 10 is packed with new features and a revamped interface. If you are coming from Windows 7, you will definitely feel different using Windows 10, and if you are coming from Windows 8 or 8. Here are other tutorials you might find useful in getting started using your Windows 10 computer:

Chapter 2 : How to Use Windows 10 - Guide for Beginners & Power Users

This guide is meant for Windows 10 beginners. We go over how to change font size, add a password to your account, change your background, and much more! Facebook.

Chapter 3 : How to Install Windows 10 on a New Computer (Beginner's Guide)

This tutorial provides a detailed beginners guide to Windows This covers the Windows 10 Start Menu, System Settings, Windows 10 Universal Apps, Taskbar, Cortana Digital Assistant, Task View.

Once you install your first Windows, the second time is no brainer as easy as pie. There are several ways to install this operating system and you need to choose which is best for you. All you need to do is, choose your USB drive and wait until the download has finished. The setup tool automatically creates a bootable device which can be used to install Windows in no time. All you need to do is download the Media Creation Tool from Microsoft and then you decide how you install Windows 10 on your computer. I had to use my pen drive to create a bootable USB device. I would prefer asking a friend to help or you can go to a local store where might get the unactivated version of Windows However, I strongly recommend downloading from Microsoft itself. How to Install Windows 10 from Pendrive? This is the most common way of installing an operating system nowadays. But very luckily, you are going to be using the Media Creation Tool which automatically downloads and turns your Pendrive into a bootable device. Go to boot options in BIOS settings. Now you have to set your Pendrive to the first boot option. This means, your Pendrive will be booted at first which will launch the installation of Windows. When you are creating the partitions for the different drives, you will see the total about of storage you have on your hard disk or SSD. Make sure to divide the total storage as per your need. If you less than 4 Gigs, this should help a lot. Unlike me, if you have a CD-Drive, this is great. Similarly as when using the Pendrive, you also need to set your CD-Drive to the first boot priority device which will launch the setup for Windows Similarly, as when using the Pendrive, you also need to go to the BIOS settings and to boot options and set your CD-Drive to the first boot priority device which will launch the setup for Windows The whole installation took me around 40 minutes, and this might vary for you depending on your storage speed. I believe, every beginner can do this after reading this guide. I have already written several guides for Windows 10 users such as fixing internet issues and a lot more. Found this post helpful? Chapter 4 : The Beginner's Guide to OneNote in Windows 10

Windows 10 The Ultimate Beginner's Guide How to Operate Microsoft Windows 10 (tips and tricks, user manual, user guide, updated and edited, Windows for beginners).

The main concerns were with certain privacy settings and initial bugs. However, most â€" if not all â€" of these have been sorted out and the privacy settings are much more customizable. There are still some people who do not want to upgrade their version of Windows. Nevertheless, Windows 10 is a great operating system and there are many reasons why you should upgrade. Windows 10 offers a much friendlier user interface: It includes many improvements to speed, security, and compatibility as well. If you do not have a computer with Windows 10 you will need to upgrade or get a new computer in the near future. Many programs will begin to have compatibility issues with anything other than Windows 10 too. Windows 10 turned 2 years old at the end of July. This article will give a very basic guide to any user who has never seen or used the operating system. A Definitive Beginners Guide for Windows 10 with pictures! What am I looking at? Do I need a password to log in? How can I organize all of this? The text is too small and how can I change my background? How do I connect to Wi-Fi?! Summary What am I looking at? We will go over the Start Menu and Cortana a bit later in this article. Desktop Icons are simply shortcuts to programs already installed on your machine. You can also add links to websites through your internet browser that will appear here so you can have quick access to certain webpages. The taskbar at the bottom will show you all the programs you have running currently. This will give you another option to have quicker access to programs you use often. To pin a program to the taskbar you need to open the program first. Both the desktop icons as well as the taskbar just provide you quicker access to Programs and files you may use often. The notification center in the bottom right hand corner is a useful tool that Windows 10 will use to alert you to things such as when updates have been installed. It can alert you if problems are detected on your computer as well. There are also helpful icons that you can use to open things such as networking and audio controls. Windows 10 brought back the start menu Hurray! Access the Start Menu by click the Windows Logo in the bottom left corner. Up top there are categories for Recently Added and Most Used programs which could be useful for accessing programs quickly. This feature finds its roots in Windows 8. Fortunately, Windows 10 implements this feature in a way that is much easier to understand and use. The tiles are essentially a different way of viewing programs, folders, and apps on the computer. Some people enjoy customizing them and setting their favorite programs to appear on the tiles. They are completely optional and can be totally removed if you wish. Meet Cortana â€" the new navigation guide for Windows You can type anything into this box and it will search your computer and the internet for results. The file explorer looks very similar to previous version of Windows Do I need a password to log in? The technical answer is no. You do not need a password to get into the computer. In the interest of security, we recommend you use a password or one of the many options available. Windows 10 gives you several options that can save you the hassle of typing in a password each time you log in and still give you a decent level of security in case your computer were to fall into the wrong hands. Windows 10 brings us several new options to log in. You can still set up a traditional User and password. You can set this up during installation or via the new user account menu. Such as adding a 4-digit PIN number. This will be slightly faster than typing out a good password as well as giving you more options in case you were to forget your password. The picture password is an option you can use if you have a touch screen. If you have a touch screen you can unlock your computer by drawing a pattern on the screen Certain computer models will even allow access to the Windows Hello feature which will let you use fingerprint or facial recognition and let you bypass the password! Finally, you have the option to connect your device to your Microsoft Account. This can save a ton of time and hassle setting up a new computer or device. For more in-depth information on this topic you can check out this article from Digital Citizen. Right click in the file explorer window to create a new folder. This will allow you to appropriately name the folder and begin saving or places relevant documents within it. You may also want to change how things look within the file explorer. Maybe you want larger icons. To change how the folder look in file explorer click the view tab on top and select how you wish them to appear.

Windows 10 makes it easy to adjust several settings that can be extremely useful but overlooked by many manufacturers. You may find that your icons on the desktop are hard to see. To make the icons larger on the desktop just right click on the desktop and use the view option. Select the percentage you wish to increase the text and sit back and enjoy the larger text! This should bring you to your pictures folder where you can browse all the files and hopefully pictures within the folder. To change your background to a picture on your computer, click the browse button and navigate to where your picture is saved. However, in this day in age where most people have access to a second computer or a smart phone device, we thought it would be a useful addition. In order to find a Wi-fi connection you need to locate the Wi-fi icon. You can find it in the lower right-hand corner of your screen and looks something like this: Look for the Wi-Fi icon in the bottom right hand corner. Click on that icon to bring up a list of all the wireless networks your computer can see. When you click the icon a list of all currently available Wi-Fi networks will be brought up. This is the password for your Wi-fi network. Hopefully you have this information stored somewhere so you can look it up. If not, a technician may need to visit you on-site to help setup your Wi-fi. Click on your network to connect. This is a good sign! If the icon looks like this you may have typed the password incorrectly. If you get an icon that looks like this: If your icon looks like this, the Wi-Fi might be disabled on your device. You need to double check and make sure you Wi-fi is turned on. Do this by clicking on the Wi-fi icon. If the Wi-fi button is not highlighted blue like this: If your Wi-fi button is grayed out like this, then you need to click it to turn Wi-Fi on. Summary We hope this guide gives you a good start at using Windows 10 and has given you the basic skills you need to navigate and personalize it. If there is a particular topic you would like for us to cover more in depth just let us know!

Chapter 5 : Windows 10 â€" Beginners Guide [Tutorial] | Windows Tutorials

The Windows 10 operating system has been out for more than a couple years now. I still get questions on how to perform certain tasks and which settings to use within the operating system.

This detailed article shows you how to dual boot Ubuntu with Windows 10, step-by-step, accompanied with proper screenshots. Previously I had written about dual booting Ubuntu Linux with Windows 7 and 8, but those tutorials did not cover systems that come with Windows 10 pre-installed. The newer systems that come with Windows 8 or Windows 8. This makes thing a little different from the conventional way of dual booting. In this tutorial, we shall see how to install Ubuntu with Windows 10 already installed. If you have already done some of these steps, just skip to the next one. If you have a fresh system, even better. Dual boot Ubuntu with Windows 10 and Windows 8. Though I have used Ubuntu Make a backup [optional] It is always nice to make a back up, just in case if you mess up with the system. You can follow this tutorial here. The GB in my system was already had several partitions from manufacturer but mainly for backup and other purposes. Main partition was C drive, of around GB, where Windows 8. If you have several partitions of considerable size, use any of them except C drive because it may erase the data. To make a partition in Windows 8, go to Disk Management tool. In the Disk Management tool, right click on the drive which you want to partition and select shrink volume. In my case, I shrank the C drive to make some free space: You can leave the free space as it is. We shall use it while installing Ubuntu. While it is not mandatory, it would be better to have it disabled. If you need more hints, follow this screenshot tutorial to disable fast startup in Windows. Disable secureboot in Windows 10 and 8. The new secure boot feature of Windows 8, originally intended for security feature for rootkit viruses, prevents dual booting of Windows with Linux. It is better that you follow this screenshot guide to disable secure boot in Windows 10 Windows 8. Installing Ubuntu along with Windows 10, 8. I hope you already created the live USB as mentioned in step 2. Plug in the USB and boot the system from it. Once you have booted in the live USB, you will be presented with option to try or install Ubuntu. It will then do some checks on available space, power and internet connection etc. Just click on Continue. Choose Something else here: Remember we had created some free space beforehand? We shall use the free space to create Root, Swap and Home. It will provide you with option to create Linux partition. We are creating the Root partition. Any thing between GB is more than sufficient for it. Clicking on OK in previous step will bring you to the partition screen. Next we will create swap. This time use the file type as Swap area. Suggestible swap size is double of RAM. In similar fashion, create a Home partition. Well, you have almost won the battle. You can smell victory now. Next you will be asked to set username password etc. Basically, you just need to click next now. Once the installation is completed, restart the computer, you should be welcomed by a purple grub screen. Enjoy Ubuntu along with Windows 10 in dual boot mode. Then run the following command: If you want to reverse the process, follow this guide to remove Ubuntu from dual boot with Windows. Though this article is written for Ubuntu, it should be helpful for other Linux OS as well. Any questions or suggestions are always welcomed. How To , Linux Tagged With: I am an avid Linux lover and Open Source enthusiast. I use Ubuntu and believe in sharing knowledge. Apart from Linux, I love classic detective mysteries.
