

## Chapter 1 : Peninsula - Wikipedia

*A large body of land surrounded by water is called an "island." Islands range in size from less than one acre in area to hundreds of thousands of square miles. Although continents are also surrounded by water, they are far larger than islands.*

AP â€” The Latest on Florence all times local: North Carolina officials say a body has been found in a trailer near the flooding Cape Fear River. Sean Swain told The Associated Press that authorities have not confirmed if the man drowned due to flooding from former Hurricane Florence, or if he died of other causes. The deputies were rescued from the top of the van, and Horry County officials say they tried to get the women out. The incident happened near the Little Pee Dee River, which is one of the bodies of water officials are monitoring for intense flooding from Florence. The Department of Public Safety says all of Interstate 95 in South Carolina is now open A 9-mile kilometer stretch of the highway northbound had been closed because of flooding due to former Hurricane Florence. The section reopening is from mile marker to State officials in North Carolina now say 3. The former hurricane swamped dozens of farm buildings where the animals were being raised for market. Officials previously had estimated that about 1. Sixteen North Carolina rivers were at major flood stage Tuesday, with an additional three forecast to peak by Thursday. Officials have identified the two mental health patients who drowned when a van they were riding in was swept away in South Carolina flood waters. Two deputies were rescued from the top of the van, and Horry County officials say they tried to get the women out. Richardson says the incident happened near the Little Pee Dee River, which is one of the bodies of water officials are monitoring for intense flooding following Florence. Authorities confirm two detainees drowned when a van was swept away in rising flood waters in South Carolina. Officials say the van was traveling near the Little Pee Dee River, one of the bodies of water officials in South Carolina are watching closely as water continues to pour into the state from upriver in North Carolina following the heavy rains of Florence. Their names have not been released. High-water rescue teams plucked the deputies from the top of the van. The incident is being investigated by the State Law Enforcement Division. Forecasters predict some rivers in the northeastern area of the state might not reach their highest levels until later this week or next week.

**Glossary of Geographic and Oceanographic Terms**

**Land Features**

**Continent** Large continuous area of land on the earth's surface generally surrounded by water.

**Island** Body of land smaller than a continent that is surrounded by water. Greenland is the largest island.

**Isthmus** Narrow section of land connecting two larger land areas, surrounded on two sides by water.

**Peninsula** Extension of land surrounded on three sides by water.

**Mountain Range** Continuous chain or series of mountains.

**Plain** Large, low, flat region of land.

**Plateau** Large area that is high and fairly flat.

**Butte** Isolated hill with steep sides, smaller than a plateau. Commonly found in the southwestern United States.

**Mesa** Similar to a plateau, but smaller in size: Flat on top, cliffs on the sides.

**Valley** Low area of land lying between hills or mountains.

**Ice Cap** Large area of ice several thousand feet thick covering either land or water.

**Water Features**

**Ocean** Large body of salt water generally bounded by continental land masses.

**Sea** Body of water smaller than an ocean lying within a continent or island group.

**Gulf** Large area of water partially surrounded by land.

**Channel** Narrow body of water lying between two areas of land.

**Bay** Small area of water surrounded by land on three sides and penetrating into the land.

**Lake** Smaller body of fresh water surrounded by land.

**Strait** Similar to channel.

**Submarine Features**

**Basin** Large circular depression on the ocean floor, generally 10, to 20, feet below sea level.

**Ridge** Submerged mountain chain. The largest are the mid ocean ridges which join together to form a feature 40, miles long.

**Rift** Sometimes found on the crest of a Ridge.

**Rise** A large elongated elevation like a ridge but having less steep slopes.

**Trench** Long and narrow V-shaped depressions often found near a continent or on the outside of island arcs.

**Fracture Zone** Zones of irregular topography thousands of miles long and about miles wide, which separate large regions of the ocean floor having different depths or types of topography.

**Continental Shelf** Shallow marine terrace bordering the continents. The shelf deepens gradually to a depth of feet about 50 miles from shore where a sudden increase in slope angle marks the top of the Continental Slope.

**Continental Slope** Slope from the outer edge of the Continental Shelf to the ocean basin.

**Submarine Canyon** Stee-sided gorge cut into the Continental Slope and Shelf thought to be cut by underwater flows of sediment called Turbidity Currents.

**Seamount** Submerged mountain, generally of volcanic origin, having at least fathoms feet of relief. Some seamounts, called guyots, have flat tops. They are submerged volcanic islands which had their tops smoothed by surf and erosion while they were above the surface.

Be the first to ask a question about A Body Surrounded by Water I've been reading the Charlie Salter series in order and this one is the best yet. Eric Wright has almost completely captured the atmosphere, the culture.*

Note that there are some geographical features involving water that are not bodies of water, for example waterfalls , geysers and rapids. Arm of the sea " also sea arm , used to describe a sea loch. Arroyo " a usually dry creek bed or gulch that temporarily fills with water after a heavy rain, or seasonally. Artificial lake or artificial pond " see Reservoir impoundment. Barachois " a lagoon separated from the ocean by a sand bar. Bay " an area of water bordered by land on three sides, similar to, but smaller than a gulf. Bayou " a slow-moving stream or a marshy lake. Beck " a small stream. Bight " a large and often only slightly receding bay, or a bend in any geographical feature. Billabong " an oxbow lake in Australia; a pond or still body of water created when a river changes course and some water becomes trapped. Boil " see Seep Burn " a small stream. Canal " an artificial waterway, usually connected to and sometimes connecting existing lakes, rivers, or oceans. Channel " the physical confine of a river, slough or ocean strait consisting of a bed and banks. See also stream bed and strait. Cove " a coastal landform. Earth scientists generally use the term to describe a circular or round inlet with a narrow entrance, though colloquially the term is sometimes used to describe any sheltered bay. Creek " a small stream. Creek tidal " an inlet of the sea, narrower than a cove. Delta " the location where a river flows into an ocean, sea, estuary, lake, or reservoir. Distributary or distributary channel " a stream that branches off and flows away from a main stream channel. Drainage basin " a region of land where water from rain or snowmelt drains downhill into another body of water, such as a river, lake, or reservoir. Draw " a usually dry creek bed or gulch that temporarily fills with water after a heavy rain, or seasonally. Estuary " a semi-enclosed coastal body of water with one or more rivers or streams flowing into it, and with a free connection to the open sea Firth " a regional term of Scotland used to denote various coastal waters, such as large sea bays, estuaries, inlets, and straits. Fjord fiord " a narrow inlet of the sea between cliffs or steep slopes. Glacial pothole " a kettle Gulf " a part of a lake or ocean that extends so that it is surrounded by land on three sides, similar to, but larger than a bay. Headland " an area of water bordered by land on three sides. Impoundment " an artificially-created body of water, by damming a source. Often used for flood control , as a drinking water supply reservoir , recreation, ornamentation artificial pond , or other purpose or combination of purposes. Note that the process of creating an "impoundment" of water is itself called "impoundment. Kettle or kettle lake " a shallow, sediment-filled body of water formed by retreating glaciers or draining floodwaters. Kill " used in areas of Dutch influence in New York , New Jersey and other areas of the former New Netherland colony of Dutch America to describe a strait, river, or arm of the sea. Lagoon " a body of comparatively shallow salt or brackish water separated from the deeper sea by a shallow or exposed sandbank , coral reef , or similar feature. Lake " a body of water, usually freshwater, of relatively large size contained on a body of land. Loch " a body of water such as a lake, sea inlet, firth, fjord, estuary or bay. Mangrove swamp " Saline coastal habitat of mangrove trees and shrubs. Marsh " a wetland featuring grasses, rushes, reeds, typhas, sedges, and other herbaceous plants possibly with low-growing woody plants in a context of shallow water. See also Salt marsh. Mediterranean sea oceanography " a mostly enclosed sea that has limited exchange of deep water with outer oceans and where the water circulation is dominated by salinity and temperature differences rather than winds Mere " a lake or body of water that is broad in relation to its depth. Mill pond " a reservoir built to provide flowing water to a watermill Moat " a deep, broad trench, either dry or filled with water, surrounding and protecting a structure, installation, or town. Oxbow lake " a U-shaped lake formed when a wide meander from the mainstem of a river is cut off to create a lake. Phytotelma " a small, discrete body of water held by some plants. Pool " various small bodies of water such as a swimming pool , reflecting pool , pond, or puddle. Pond " a body of water smaller than a lake, especially those of artificial origin. Pothole " see Kettle Puddle " a small accumulation of water on a surface, usually the ground. Reservoir " a place to store

water for various uses, especially drinking water, which can be a natural or artificial see Lake and Impoundment above Rill " a shallow channel of running water. These can be either natural or man-made. River " a natural waterway usually formed by water derived from either precipitation or glacial meltwater, and flows from higher ground to lower ground. Roadstead " a place outside a harbor where a ship can lie at anchor; it is an enclosed area with an opening to the sea, narrower than a bay or gulf often called a "roads". Run " a small stream or part thereof, especially a smoothly flowing part of a stream. Salt marsh " a type of marsh that is a transitional zone between land and an area, such as a slough, bay, or estuary, with salty or brackish water. Sea " a large expanse of saline water connected with an ocean, or a large, usually saline, lake that lacks a natural outlet such as the Caspian Sea and the Dead Sea. In common usage, often synonymous with ocean. Sea loch " a sea inlet loch. Sea lough " a fjord, estuary, bay or sea inlet. Seep " a body of water formed by a spring. Slough " several different meanings related to wetland or aquatic features. Source " the original point from which the river or stream flows. Sound " a large sea or ocean inlet larger than a bay, deeper than a bight, wider than a fjord, or it may identify a narrow sea or ocean channel between two bodies of land. Spring " a point where groundwater flows out of the ground, and is thus where the aquifer surface meets the ground surface Strait " a narrow channel of water that connects two larger bodies of water, and thus lies between two land masses. Stream " a body of water with a detectable current, confined within a bed and banks. Subglacial lake " a lake that is permanently covered by ice and whose water remains liquid by the pressure of the ice sheet and geothermal heating. They often occur under glaciers or ice caps. Lake Vostok in Antarctica is an example. Swamp " a wetland that features permanent inundation of large areas of land by shallow bodies of water, generally with a substantial number of hummocks, or dry-land protrusions. Tarn " a mountain lake or pool formed in a cirque excavated by a glacier. Tide pool " a rocky pool adjacent to an ocean and filled with seawater. Tributary or affluent " a stream or river that flows into a main stem or parent river or a lake. Vernal pool " a shallow, natural depression in level ground, with no permanent above-ground outlet, that holds water seasonally. Wadi " a usually dry creek bed or gulch that temporarily fills with water after a heavy rain, or seasonally. See also Arroyo creek. Wash " a usually dry creek bed or gulch that temporarily fills with water after a heavy rain, or seasonally. Wetland " an environment "at the interface between truly terrestrial ecosystems and truly aquatic systems making them different from each yet highly dependent on both".

## Chapter 4 : Bodies of Water - Vocabulary List : calendrierdelascience.com

*According to calendrierdelascience.com, an island is land completely surrounded by water, as long as it's not large enough to also be called a continent. Australia is considered a continent and is times the size of Greenland, which is considered the largest island in the world.*

Basin â€” The term basin refers to lands that descttp: Bay â€” A bay is a body of water partially enclosed by land. Bayou â€” The term bayou refers to a slow-moving river, stream, or a marshy wetland or lake. Bayous are most often found in low-lying, flat areas. Canal â€” A canal is a water channel that is man made. Channel â€” A channel is a body of water which connects two larger bodies of water. Confluence â€” A confluence is a combination of two or more streams flowing together. Cove â€” A cove is a small body of water along a coast. The land surrounding the cove is often made up of soft rock. Creek â€” A creek is a small stream of water that often times merges with a larger river. Delta â€” A delta is the watery land that forms at the mouth of a river. Draw â€” A draw is a valley or gorge that is found between rock clefts. Endorheic Basin â€” An endorheic basin is a basin that does not flow to a major ocean. Estuary â€” An estuary is the area where a river comes into contact with a sea or ocean. Fjord â€” A fjord is a long and narrow sea inlet that has steep sides and is formed when a glacier cuts a valley into the surrounding bedrock. Floodplain â€” A floodplain is nearly flat or flat land that is located next to a river or stream and that experiences occasional flooding. Gulf â€” A gulf is a portion of the sea or ocean that is partially surrounded by land. Harbor â€” A harbor is a protected inlet of a lake, sea, etc. Inlet â€” An inlet is a body of water, typically seawater, that has characteristics of other bodies of water such as fjords, bays, coves, and so on. Lagoon â€” A lagoon is a body of water that is shallow and found along a coast. Lake â€” A lake is a large body of water that is surrounded by land on all sides. Loch â€” A loch is another term for a body of water such as a lake, bay, fjord, sea inlet, etc. Reservoir â€” A reservoir is an artificial body of water, such as a lake, that is used for storing water. River â€” A river is a body of water that flows and typically empties into an ocean or sea. Sea â€” A sea is a large body of saline water that many times connects to an ocean. It may also describe a lake which does not have a natural outlet to an ocean. Sound â€” A sound is a wide inlet that separates two bodies of land. Spring â€” A spring is a place at which groundwater flows up out of the ground. Strait â€” A strait is a narrow body of water that connects larger bodies of water to each other. Stream â€” A stream is a small body of water that has a flowing current and it contains banks and a bed. Swamp â€” A swamp is a type of wetland that contains freshwater. Tributary â€” A tributary is a river or stream that flows into a larger river. Whirlpool â€” A whirlpool is water that occurs in a rapid, swirling motion. It is caused by the meeting of two opposing currents.

**Chapter 5 : an area of land almost completely surrounded by water is a (an)? | Yahoo Answers**

*A body of water or waterbody (often spelled water body) is any significant accumulation of water, generally on a planet's surface. The term most often refers to oceans, seas, and lakes, but it includes smaller pools of water such as ponds, wetlands, or more rarely, puddles.*

An encyclopedic list of water dream interpretations. Bodies of water are places we cannot live. But what do dreams about water mean? If you are underwater in your dream, this might indicate feeling drowned, overwhelmed, or swallowed up by unconscious thoughts, emotions, urges, or memories. In dreams, water is often associated with emotions and their expression. The surface of the water represents the dividing line between the consciousness and the unconscious. Water can also represent maternity, those primal feelings associated with our mothers or our desire to become a mother. Finally, water can relate to spirituality and spiritual or religious beliefs. Water, as most symbols, can have both negative and positive meanings in dreams.

The cleanliness of the water: Is it clear and pure or polluted and murky? The depth of the water: Is it shallow or deep? The quality of water: Is it transparent or opaque, warm or cold, peaceful or ominous? The motion of the water: The quantity of water: Is there a drought, or is there too much water flooding the dream? If, in your dream, you can breathe under water, this could be an indication that you have adapted to a difficult emotional situation.

Source Dreaming of Oceans Oceans can represent the state of your emotions and limitlessness of the unconscious and spirit. Being tossed by waves or set adrift in an ocean may reflect feelings of impotence or loneliness. This dream symbol can have both negative and positive meanings. On the other hand, oceans can be overwhelming and rough. We are no match for the ocean and are unable to control it. Are you going with the flow or drifting aimlessly? Dreams of Waves, Tidal Waves, and Tsunamis As with most symbols, waves can have both negative and positive meanings. Riding a wave is a positive representation of effectively managing emotions and difficult challenges in life. This type of flexibility allows the dreamer to surpass obstacles and achieve goals. Tidal waves and tsunamis tend to relate to emotions that are overwhelming and threatening the dreamer. When emotions and issues are repressed and avoided, they push back until they are acknowledged by the dreamer. Problems often grow and become overwhelming when ignored for too long. Emotions represented within floods and waves are often layered. This type of dream may indicate to the dreamer a need to address the anxiety and fears associated with addressing the deeper emotions that have been avoided over time. Are you going with the flow and trusting nature or a higher power to influence the direction of your life, or are you being passive and directionless? Raging or muddy rivers often reflect emotional turmoil. Clear and calm rivers often reflect inner peace, balance, and harmony, a person who is not over-controlling or under-controlling, and positive feelings of joy and happiness in general. Crossing a river may represent overcoming an obstacle or moving from one stage to another. What does it mean if you dream about a river? Source Dreams of Waterfalls Waterfalls often relate to a great release of emotion, rejuvenation, and renewal of spirit. Waterfalls can also have sexual connotations. Dreams of Pools Pools often relate to relaxation and enjoyment associated with summer, spending time with family or friends, and vacation, but they can also have deeper meanings. Since they are manmade, they can represent the compartment we have built to hold our emotions. Seeing a pool may represent your need to get in touch with and gain a deeper knowledge and understanding of these feelings. An empty pool may represent feeling numb, drained, and without emotions. Although not always, many individuals with substance abuse issues report dreaming of empty pools. Perhaps escaping emotions and coming down from a high leave the dreamer feeling empty and void of all emotion. Dreaming of Ponds Ponds are often associated with tranquility, stillness, the need to sit quietly with oneself and reflect, and being emotionally calm in general. Although ponds contain emotion, they are natural bodies of water and often represent the quiet, tucked-away emotions and unconscious self that has been present all along but not yet fully explored. Ponds typically contain a lot of life. It may be beneficial to explore what creatures are contained in the pond. Are these plants or animals natural to the pond? Are these plants or animals thriving or dying? The qualities of the life surrounding the pond may give you further insight into your current emotional state. What does it mean if you dream about a sink faucet spurting water? The

water may represent your emotions, and the tap is your control over them. If you dreamed of a faucet, do you find you are able to turn your emotions on and off easily, or do you yearn for that kind of emotional control? Dreaming of a faucet you cannot control could mean you are attempting to over-control your emotions and are feeling overwhelmed. Your feelings cannot be completely contained and will gush through whatever barriers you have put up. Dreaming of water that is too hot could relate to "hot" emotions such as anger or passion. Dreaming of water that is too cold could relate to "cold" emotions such as depression, sadness, lack of love, and difficulty being in touch with your emotions. A leaky faucet could relate to an indicator that something within you needs some maintenance or attention. It could mean your regulation of your emotions is not in its best shape and you need to review where you are putting your energy. If you are focused on the drain, perhaps you are feeling drained by your own decisions or by others. Dreams of a Bathtub or Shower Bathing often relates to self-renewal, cleansing, and shedding the past burdens, stress, and emotional residue of a situation. Bubble baths may indicate a need to pamper yourself and find time to relax. If you associate bubble baths with your youth, the dream may relate to a need to honor your inner child and make time for the little things that make you happy and carefree. Rain Dreams Rain dreams can be negative as well as positive. Although rain could be a symbol of depression, sadness, and shedding tears, it could also relate to grace from God or a higher power and forgiveness. Rain may indicate a great, cleansing release of emotions. Dreaming of rain may allow you to shed symbolic tears. If you are a movie buff, rain may relate to a turning point in your life since it often rains during movies at a significant turning point. Lakes are larger than ponds and tend not to carry a meaning of solitude the way a pond does. As with all water dreams, the quality of the water and the overall context of the scene is important. A lake may represent the emotional state of the dreamer. Turbulent water tends to mean emotional turmoil. As with all symbols, lakes can refer to something very personal to the dreamer. It is worthwhile to explore your experience with lakes. Perhaps this was a place you would vacation with family when you were younger for instance. In this case, the lake could represent fond childhood memories or a retreat to the security of the past. Dreaming of a jetty or pier in a lake could represent self-reflection into the unconscious leading to emotional and spiritual growth. Stream Dreams Streams can represent the flow of emotions for many dreamers. Streams can also represent new and inspiring thoughts or ideas. A stream may indicate to a dreamer that thoughts are spontaneous, free flowing, and not over-thought. Since streams are smaller than rivers, they may give a gentle, slow feel to the dream. In most dreams, the stream ends up relating to a little hint or a spark of something significant that can grow and develop over time for the dreamer. A bridge over a stream may mean you are making an emotional transition. Are you attempting to avoid your feelings or are you overcoming an emotional issue? Dreams of Floods Floods can be damaging. In dreams, they tend to relate to emotional pain, devastation, and feelings of overwhelm. Floods can have many different characteristics within a dream. It is important to explore if this was a biblical kind of flood destroying your world and starting over, a slow flood, or the looming threat of a flood. Threats of devastation that do not actually materialize in the dream relate to excess worry, fears, and negative thinking. Some dream dictionaries will tell you a flood relates to pent-up sexual desires. This is a narrow interpretation of this significant symbol since sexual feelings are just one of the many feelings that may overwhelm and we may repress or experience in a rush or in which we may feel swept away. In general, feelings need to be expressed and acknowledged in some way. When they are ignored or repressed, tension builds up. Eventually, the feelings overwhelm and flood, forcing the person to express them one way or another. This inner dynamic and struggle between over-controlling and being controlled by the emotions is not a healthy one. Emotional well-being is achieved when we find a balance in which we regulate emotions steadily instead of blocking them or being overtaken by them.

Water Dreams The symbolism of water dreams can include life, death, change, rebirth and renewal, to name a few. When analyzing dreams about water, take into account the type of water formation you are surrounded by i. Also important is your location with respect to the water. How much water is there, does it flow smoothly or is the flow obstructed? Are you outside in the rain or inside taking a shower? In general, dreams about water are symbolic of your emotions in your waking life, the deepest recesses of your subconscious mind and your intuition. Subconsciously, it is a sign of self-renewal. Boiling water â€” You have reached a breaking point in your waking life over certain situations. Emotional chaos and turbulence are starting to come to the surface. Flood â€” You may be harboring feelings of being emotionally overwhelmed. It can also represent a crisis state that you need to address in your waking life. Holy water â€” Somewhere in your waking life you may be looking for some type of spiritual help or guidance. Or it may represent that your mind, body and spirit is at peace. You might also be dealing with unresolved feelings of stress and unhappiness in your waking life. Muddy, dirty and stagnant water â€” You might be uncertain and confused about a situation and do not know how to take appropriate action. This can also indicate you are drowning in negative thoughts and emotions. You are not thinking or seeing clearly enough to find the proper solution to the problems in your life. It may also be an omen signaling some difficult times ahead. If the water is also stagnant, this symbolizes disappointment. Ocean and Sea â€” It can represent emotions or mood, positive or negative, depending upon whether a calm or rough sea appears in the dream. It may also indicate your openness to unknown challenges or ideas. Further, it can signify that your outlook on life is positive and that your ability to achieve your goals is limitless. Ponds and Lakes â€” These represents the current emotional state in your waking life. When the water is unsettled, this may indicate that you are not able to express your emotions freely or that you are being held back by something or someone. If the water is calm and still, it reflects your feelings of inner peace. Rain â€” When rain falls on you, this can symbolize great sadness or that you are crying about something in your waking life. It can also represent emotional cleansing and the healing of unresolved past emotional sorrows or wounds. Rivers and Streams â€” If the river or stream is tranquil and serene, this is an indication that you are at peace with changes that may be occurring in your waking life. If the river is tumultuous and fast flowing, this may be a sign that things are moving too quickly in your life and there is a need to slow down so that you can gain control. If you find yourself going with the flow of the river, chances are your life is taking you in a positive direction. If you are having trouble getting across the river, this can indicate that there are obstructions or blockages in your life keeping you from attaining your goals. Splashed water â€” This is your wake-up call. It is time to stop holding yourself back or living in denial. Not heeding the message will result in stagnation and lack of accomplishment. Swimming Pool â€” A swimming pool can represent the need or the want for relaxation. It can also mean that you have a need to finally deal with old emotional pains and cleanse yourself. It might be time to finally dive in and take some action. Under water â€” You are beginning to explore a wealth of untapped gifts that have not yet surfaced from your subconscious mind. It can also reflect that you are trying to escape from overwhelming situations in your waking life. It also might be symbolic of returning to the womb â€” a time in which you had no responsibilities and were sheltered and protected. Walking on water â€” You are in control of your emotions and have confidence and faith in yourself in your waking life. Waterfall â€” This is an indication of emotional cleansing, revitalization and finding inner peace within your mind, body and spirit. Waves â€” There are positive and negative aspects when dreaming of waves. If you find yourself successfully riding the waves, it is an indication of your ability to handle anything that gets in your way and to consistently go beyond the status quo. Depending on the force of the wave, it can either be an indication that you are moving toward your goals or you are being carried away from them. All in all, dreams about water have a strong relationship to the emotions you are experiencing in your life. It is very important to understand what is truly going on in your waking life in order to be able to interpret the water symbolism in

your dreams. You will learn much about your emotional needs, conflicts, unresolved feelings and disappointments. In so doing, you will experience rebirth and renewal, healing and cleansing achieve your goals, avert obstacles and learn how to keep your emotions under control for a healthy mind, body and spirit. To learn more about dreams and their meanings, visit the Dreaming Room.

### Chapter 7 : How to Interpret a Dream Involving Water: 11 Steps (with Pictures)

*North Carolina officials say a body has been found in a trailer near the flooding Cape Fear River.*

### Chapter 8 : The Latest: Body found in NC trailer surrounded by water

*Water bodies are described by a plethora of different names in English: rivers, streams, ponds, bays, gulfs, and seas to name a few. Many of these terms' definitions overlap and thus become confusing when one attempts to pigeonhole a type of water body. A look at its characteristics is the place to.*

### Chapter 9 : Landforms Glossary - calendrierdelascience.com

*The water present in the body is however, not present always as water per se, but is contained as a component of many other fluid matrices within the body which encompass cells, tissues, organs and so on.*
