this can be achieved using formula column/summary column and between pages trigger. get the page sum stored in the formula column and pass it to the field variable in between pages trigger. set display all but first page property for the carry forward field.

There can be many processes, and each process has its own 2 GB of private virtual address space. This frees that RAM frame for other uses. There can be one such file in each disk partition. Users frequently ask "how big should I make the pagefile? If there is no other information available, the typical recommendation of 1. On server systems, you typically want to have sufficient RAM so that there is never a shortage and so that the pagefile is basically not used. On these systems, it may serve no useful purpose to maintain a really large pagefile. On the other hand, if disk space is plentiful, maintaining a large pagefile for example, 1. Performance, architectural limits, and RAM On any computer system, as the load increases the number of users, the volume of work , performance decreases, but in a nonlinear manner. Any increase in load or demand, beyond a certain point, causes a significant decrease in performance. This means that some resource is in critically short supply and has become a bottleneck. At some point, the resource that is in short supply cannot be increased. This means that an architectural limit has been reached. Some frequently reported architectural limits in Windows include the following: However, Windows Vista, Windows Server , and Windows 7 do not all share these architectural limits. The limits on user and kernel memory numbers 1 and 2 here are the same, but kernel resources such as PTEs and various memory pools are dynamic. This new functionality enables both paged and nonpaged memory. This also enables PTEs and session pool to grow beyond the limits that were discussed earlier, up to the point where the whole kernel is exhausted. Frequently found and quoted statements such as the following: However, you have to monitor your system to know whether they apply to your particular system or not. In some cases, these statements are conclusions from specific Windows NT 4. Significant changes were made to Windows Server to reduce the probability that these architectural limits will in fact be reached in practice. For example, some processes that were in the kernel were moved to non-kernel processes to reduce the memory used in the shared virtual address space. Monitoring RAM and virtual memory usage Performance Monitor is the principle tool for monitoring system performance and for identifying the location of the bottleneck. Here is a summary of some important counters and what they tell you: This counter is a measure of the demand for virtual memory. This shows how many bytes were allocated by processes and to which the operating system has committed a RAM page frame or a page slot in the pagefile or perhaps both. As Committed Bytes grows greater than the available RAM, paging will increase, and the pagefile size that is being used will also increase. At some point, paging activity starts to significantly affect performance. This counter is a measure of the virtual memory in "active" use. This counter is a measure of how much of the pagefile is actually being used. Use this counter to determine whether the pagefile is an appropriate size. If this counter reaches , the pagefile is full, and things will stop working. Depending on the volatility of your workload, you probably want the pagefile large enough so that it is generally no more than percent used. This counter is one of the most misunderstood measures. A high value for this counter does not necessarily imply that your performance bottleneck stems from a shortage of RAM. The operating system uses the paging system for purposes other than swapping pages because of memory over-commitment. This counter shows how many virtual memory pages were written to the pagefile to free RAM page frames for other purposes each second. This is the best counter to monitor if you suspect that paging is your performance bottleneck.

If you carry forward a balance, you transfer it to the next page or column of an account, or to another ledger or book, so that it will be the starting figure there. This balance is carried forward from the previous page.

February Learn how and when to remove this template message Page size is usually determined by the processor architecture. Traditionally, pages in a system had uniform size, for example bytes. However, processor designs often allow two or more, sometimes simultaneous, page sizes due to its benefits. There are several points that can factor into choosing the best page size. A multi-level paging algorithm can decrease the memory cost of allocating a large page table for each process by further dividing the page table up into smaller tables, effectively paging the page table. Page size versus TLB usage Since every access to memory must be mapped from virtual to physical address, reading the page table every time can be quite costly. Larger page sizes mean that a TLB cache of the same size can keep track of larger amounts of memory, which avoids the costly TLB misses. Internal fragmentation of pages Rarely do processes require the use of an exact number of pages. As a result, the last page will likely only be partially full, wasting some amount of memory. Larger page sizes lead to large amount of wasted memory, as more potentially unused portions of memory are loaded into main memory. Smaller page sizes ensure a closer match to the actual amount of memory required in an allocation. Because of this, large sequential transfers are more efficient than several smaller transfers. Transferring the same amount of data from disk to memory often requires less time with larger pages than with smaller pages. Determining the page size in a program[edit] Most operating systems allow programs to discover the page size at runtime. This allows programs to use memory more efficiently by aligning allocations to this size and reducing overall internal fragmentation of pages. Windows-based operating systems[edit] Win32 -based operating systems, such as those in the Windows 9x and Windows NT families, may use the system function GetSystemInfo [15] [16] from kernel The available page sizes depend on the instruction set architecture, processor type, and operating addressing mode. The operating system selects one or more sizes from the sizes supported by the architecture. Note that not all processors implement all defined larger page sizes.

Friedrich Nietzsche As memory may be a paradise from which we cannot be driven, it may also be a hell from which we cannot escape. John Lancaster Spalding The conversation of two people remembering, if the memory is enjoyable to both, rocks on like music or lovemaking. There is a rhythm and a predictability to it that each anticipates and relishes. Jessamyn West Death leaves a heartache no one can heal, love leaves a memory no one can steal. Eliot The further backward you look, the further forward you can see. Winston Churchill God gave us memories that we might have roses in December. Oscar Levant History is the version of past events that people have decided to agree upon. Napoleon Bonaparte History must repeat itself because we pay such little attention to it the first time. Blackie Sherrod in Dallas Morning News How unspeakably the lengthening of memories in common endears our old friends! George Eliot However gradual the course of history, there must always be the day, even an hour and minute, when some significant action is performed for the first or last time. Peter Quennell I always knew that I would look back and laugh at the times I cried, but I never thought I would cry at the times I laughed. I thank God on every remembrance of you. Lewis Carroll Just as pieces stitched together in a quilt warm our bodies, Scrapbooks bind together memories to warm our Hearts! Just as time passes, so do memories pass as well, but those who stirred our spirits sing in our hearts forever. Keep one foot in the past while searching for the future. Ashleigh Brilliant The life given us by nature is short. But the memory of a well-spent life is eternal. Cicero Life is not measured by the number of breaths we take, but by the moments that take our breath away. Memories are a gift to be opened when those we love are far away. Memories are good, as long as we keep them in the rearview mirror and keep moving. Memories are like a garden carried in the heart. Memories are like keepsakes Memories are the most beautiful pictures our minds can paint, and nothing can ever erase them. Memories are the threads that hold together the patchwork of friendship Memories hide in every corner of my House, and I take great Delight every time I stumble across one. The memories we collect and give brighten our lives as long as we live. Memory is a complicated thing, a relative to truth but not its twin. Barbara Kingsolver Memory is a way of holding onto the things you love, the things you are, the things you never want to lose. Edward de Bono Memory, that library of the soul from which I will draw knowledge and experience for the rest of my life. Tove Ditlevsen The most treasured heirlooms are the sweet memories of our family. No man is rich enough to buy back his past. Oscar Wilde Nothing is as far away as one minute ago. Buck One form of loneliness is to have a memory and no one to share it with. Phyllis Rose One lives in the hope of becoming a memory. Antonio Porchia One of the reasons why old people make so many journeys into the past is to satisfy themselves that it is still there. Ronald Blythe Our most treasured family heirloom are our sweet family memories. The past is never dead, it is not even past. William Faulkner The past is our definition. We may strive, with good reason, to escape it, or to escape what is bad in it, but we will escape it only by adding something better to it. Wendell Berry The past, with its pleasures, its rewards, its foolishness, its punishments, is there for each of us forever, and it should be. Lillian Hellman Pictures are worth a thousand words--but only if you know the words. This is a great quote to emphasize the value of journaling. Recall it as often as you wish, a happy memory never wears out. Recollection is the only paradise from which we cannot be turned out. Jean Paul Richter Remember your history. To forget is to not belong. Black Elk So many years in one yesterday. Carla Phelps Wert Some memories are realities, and are better than anything that can ever happen to one again. Willa Cather Sooner or later we all discover that the important moments in life are not the advertised ones, not the birthdays, the graduations, the weddings, not the great goals achieved. The real milestones are less prepossessing. They come to the door of memory unannounced, stray dogs that amble in, sniff around a bit and simply never leave. Our lives are measured by these. Anthony There are times when forgetting can be just as important as

remembering--and even more difficult. Harry and Joan Mier There is a way to look at the past. Pearl Bailey There is no distance on this earth as far away as yesterday. Robert Nathan There is no greater sorrow than to recall in misery the time when we were happy. There is something terrible yet soothing about returning to a place where you once lived. You are one of your own memories. Sometimes you will never know the value of a moment until it becomes a memory. Seuss Sooner or later a person learns to write thing down. The strongest memory is weaker than the palest ink. Sweet memories are a rare jewel which time polishes into perfection. There is no fence or hedge round time that has gone. You can go back and have what you like if you remember it well enough. Richard Llewellyn There is nothing like returning to a place that remains unchanged to find ways in which you yourself have altered. Nelson Mandela To look backward for a while is to refresh the eye, to restore it, and to render it more fit for its prime function of looking forward. We shape our lives not by what we carry with us-- but by what we leave behind. What is not written and recorded is soon forgotten. Just as our photographs need an acid-free environment to protect them, our words need a place to be stored. Our stories need a place to rest, to be treasured and safely contained. Our albums become our treasure chests that keep our pictures and words from the ravages of time, dust and decay. Words allow us to gather the pictures and meanings together and give them as gifts to those we love. Lain When someone you love becomes a memory, the memory becomes a treasure. Sam Ewing Who has not saved some trifling thing more prized than jewels rare, a faded flower, a broken ring, a tress of golden hair. Ellen Howarth You can clutch the past so tightly to your chest that it leaves your arms too full to embrace the present. Jan Gildwell You never know when you might be making a memory. The price we pay for the quick and the easy-- "slap them in and cover them up" - may be a lost generation. The Gift of Memory Emily Barnes from the book, Timeless Treasures I have given many gifts to my children and grandchildren and nieces and nephews over the years. I suspect I will give many more before my life is through. Some will be simple, some extravagant, most carefully chosen, a few picked up in haste on the way to a birthday party. Some may be rare and unusual, the kind of gift that makes the giver hover excitedly while the paper is unwrapped. But even those incomparable treasures could have been uncovered by someone else--even, heaven forbid, by another grandmother. That is the gift of my memories, captured and preserved and passed on to the people I love. Only I can preserve the timeless treasure of what I have lived, what I have experienced, what I have loved and learned. And this is the treasure that conveys my heart and my love to them most eloquently. Even the treasures that I make by hand, the blankets and pillows and toys, provide a mute testimony to my love for them. These things may add warmth and I hope beauty to their lives. But not even the most exquisite handmade treasure cannot communicate the way a picture can, the way a word can. Sometimes you have to tell the story by actually telling the story. And the gift of family stories preserved in words and pictures is an irreplaceable treasure. Each image is like thread, Each thread woven together to make a tapestry of intricate texture, And the tapestry tells a story, and the story is our past. Hours of enjoyment are held within the pages of the family scrapbook, Everyone has pictures. A Memory is a Photograph A memory is a photograph taken by the heart to make a special moment last forever. Sitting on the porch, hot bread and butter. Penny candy in a brown paper bag. Hopscotch, butterscotch, doubledutch, Jacks,.

NOLs can come from business activity losses as a sole proprietor or partner in a partnership, or from rental investments and farming. What rules does Minnesota have for filing NOLs? For individuals, Minnesota has generally followed the federal rules for NOLs. There is no separate state calculation to claim a NOL carryback. Instead, you file an amended Minnesota return based on your updated federal return. If you choose this federal option, you are limited on your Minnesota return to a carryback period of two years preceding the loss. You may carry forward your unused part of the loss up to 20 years. How do I file an NOL? If you carry back an NOL on your federal return, Minnesota allows a two-year carryback period. Minnesota has no separate form for NOL carrybacks. If you carry forward an NOL on your federal return, Minnesota allows a year carry forward period. Your federal NOL carryforward flows through to your Minnesota return without any additional calculations. What if an NOL carryback is more than my taxable income for the year I carry it to? You may apply the excess NOL to the next eligible year on your federal return. However, Minnesota does not have a similar carryover provision at the state level. As a result, you may lose some of the tax benefit from a NOL on your state return. This scenario can occur when adjustments on your return reduce your Minnesota taxable income. See the carryback example below: Therefore, he does not get any state tax benefit from that part of the original NOL. How long do I have to claim a refund for NOL carrybacks? However, the claim period is longer if the refund is due to a NOL carryback. For more information, see Minnesota Statute Jabar has an NOL in and plans to carry it back to his return. Normally, he would have until October 15, , to amend his return and claim a refund. How does my Minnesota residency affect my NOLs? The following table and examples explain how your Minnesota residency affects your NOLs. See Residency Examples 1 and 2 below. See Residency Example 3 below. See Residency Example 4 below. Denise was a California resident in She generated an NOL in and elected to carry it forward. She moved to Minnesota late in and was a full-year resident of Minnesota in Her federal tax return will include the NOL carryover, and the benefit will flow to her Minnesota return. Theo was a Minnesota resident during and moved to California in He incurred an NOL in and carried it back to his federal return. Theo should amend his Minnesota return to claim a refund and report changes to federal taxable income because of his NOL. Jade was an Iowa resident. She moved to Minnesota in She incurred an NOL in and carried it back to her and returns. Because she did not file Minnesota returns in or , she receives no Minnesota benefit. Jade could elect to carry forward the losses on her federal return if she wants a Minnesota benefit. Claire is an Iowa resident with the following income: As a result, she cannot use the loss for Minnesota purposes. How do NOLs affect my eligibility for tax credits? You must add back any NOL carryovers when calculating household income for these credits. You do not need to recalculate these credits when you carry back NOLs to a previous year. How do NOLs affect my federal adjusted gross income? NOL carryovers reduce federal adjusted gross income. If you carry back a NOL, you must amend the following related items on your Minnesota return:

Unhappy with a new treaty , Federation Colonists along the Cardassian border have banded together. Calling themselves "The Maquis ," they continue to fight the Cardassians. Some consider them heroes, but to the governments of the Federation and Cardassia , they are outlaws. Teaser Edit Weapons fire streaks through space as a Cardassian warship attacks a much smaller vessel with phasers. The Cardassian commander , Gul Evek , hails the ship , telling them to stand down. Chakotay ignores him and tells Torres that if she can keep his engines going for thirty more seconds at full impulse , he will get them into the Badlands. Torres says that she can get enough power to the engines if they shut down the weapons systems. Chakotay concurs with his engineer. Tuvok shuts down the phasers and Chakotay orders the last photon torpedoes fired so that they can use the power from that system. The Maquis vessel soars into the plasma storms with the Cardassian warship in close pursuit. Tuvok informs Chakotay that the Cardassian ship is sending out a distress call on all Cardassian frequencies. Chakotay relaxes and sets a course for a planet where they can make repairs when a bright flash erupts through the ship. Tuvok reports that they passed through a coherent tetryon beam from an unknown source and that a massive displacement wave is rapidly approaching. Chakotay tries to maneuver his ship away from the wave, asking Torres if there is anything left in the impulse engines. The Maquis ship begins to move away at full impulse, but the displacement wave impacts the ship. She states that she served with his father on the USS Al-Batani and that she would like to speak with him about a job she wants him to do. He sarcastically replies that he is already doing a job for the Federation , but Janeway says that the Rehab Commission is very pleased with his work and has given her permission to discuss the matter with him. Paris comments that she must be good, as his father only accepts the best and brightest. Janeway tells him that her mission is to track down a Maquis vessel that vanished in the Badlands a week previous. Paris advises against it, having never seen a Federation starship that could maneuver through the plasma storms; Janeway retorts by saying that he has never seen USS Voyager. Janeway replies that he knows the territory better than anyone in the Federation. Janeway informs Paris that her chief of security had infiltrated a Maquis ship and had not reported in some time. Paris muses that perhaps it was only the chief of security that disappeared. Janeway reveals that the ship was under the command of Chakotay, a former Starfleet officer. Paris acknowledges that he knew Chakotay and that the two never got along. Paris says that the point of disagreement was that Chakotay left Starfleet "on principle," to defend his home colony, but he considered Paris a mercenary who joined "whoever would pay [his] bar bills ," an accusation to which Paris admits. Paris concludes that he will help track down the Maquis, but asks what he has to gain from the venture. Janeway says that the Federation will help him at his next parole review.
