

## Chapter 1 : Cause and Effect Worksheets

*Cause and Effect (Grades ) \$ Introduce young students to the concept of cause and effect with our Cause and Effect Lesson Plan, which enables students to identify the cause and effect of actions and events in pictures and reading content.*

These two mini-lessons will help you develop thoughtful, intelligent readers. I told him to leave. This scene repeated itself several times before I realized I needed to teach my students about cause and effect. These two mini lessons should do the trick for your class as well. Define cause and effect. Most students understand the concept, at least superficially, already. Identify cause and effect. This can be done while reading or discussing. Analyze and explain cause and effect. Apply cause and effect in their own lives, for example, understanding that attending class leads to better grades. Once a student achieves level four learning, he or she is equipped with a skill that will reap dividends for a lifetime. Graphic Organizers The easiest method for teaching cause and effect in reading is to use graphic organizers. You can either write cause in the main box and effect in the other boxes or you can write effect in the main box and causes in the others. Here are some short stories with suggestions. The causes are the protagonist stepping on a butterfly millions of years in the past and everything that happens in between. The causes are many. This Romeo and Juliet cause and effect lesson plan is fantastic. Applying Cause and Effect to Current Events High unemployment rates are bad for the country but make a good subject for teaching. This particular lesson goes well with National College Awareness Day and makes a good wrap up to any literature unit that emphasizes cause and effect. Write the following statistics on the board: The unemployment rate for college graduates 4. Using the statistics provided reading charts, graphs and statistics, by the way, is a component of most high school proficiency reading and math exams make a cause and effect statement. Add more statistics optional. In Nevada, for example, the unemployment rate as of October , is According to the Census, Nevada is 50th in percentage of students who graduate high school4. November, Images courtesy of Wikimedia Commons and are in the public domain.

### Chapter 2 : Cause And Effect Grade 1 Worksheets - Printable Worksheets

*Cause & Effect is an essential reading comprehension skill for all subject areas. Help students understand cause and effect using Spotlight on Reading: Cause and Effect for grades*

Grade 3 Cause and Effect This question is a part of a group with common instructions. They would eat without Mr. They would save some food for Mr. They would never find out what happened to Mr. They would never come to a party thrown by Mr. He tried to steal a turkey. He ran away from home. He was mean to his friends. He stole food from the store. What is the cause? No one signed up for the school talent show. They canceled the show. They will try again next year. Many kids signed up for the talent show. You played in the water, built sand castles and picked up seashells. What is the effect of not wearing sunscreen? You put on sunscreen. You had to sing a song while you ate. Grade 3 Cause and Effect The following is a cause and effect sentence. The girl was scared because of the thunder, lightning and dark sky. As a result of cold weather my ice cream melted. I was standing in the rain. The hot weather made my ice cream melt. What is the effect? What caused this to happen? She drank a special potion. She was injured by a spindle. The thirteenth fairy closed her eyes. A lullaby played throughout the kingdom. What caused the skating party to be cancelled?

### Chapter 3 : Cause and Effect (2nd Grade) Jeopardy Template

*Cause and Effect Worksheets and Printables Understanding cause and effect is an essential part of reading comprehension and following a storyline. As your child begins to make the connection between story or event elements, he is developing great inferential skills that will help him identify themes and retell stories!*

Jenn Larson on June 5, Cause-and-effect can be a tricky reading strategy to teach and to learn. While it may seem so intuitive to us as adults, oftentimes our students find it more challenging. Here are a few cause-and-effect lesson plans and starter ideas that are simple but effective wink to help your students master this reading concept. Make an anchor chart. As you introduce cause-and-effect, an anchor chart can help reinforce the concept. One thing to emphasize is that the cause is why something happened. The effect is what happened and it occurs after the cause. Gather a few items to use as cause-and-effect examples ahead of time. You could push a row of dominoes, turn a light switch on, pop a balloon, roll a ball, drop a Hot Wheel car down a ramp and so on. As you or even better, a student demonstrate these examples, ask your kids the cause and the effect for each. Give your class real scenarios and ask what would happen. You might say, If you left an ice cube on the hot sidewalk during the summer, what would happen? Then have students determine the cause and effect. Continue asking similar questions using the same frame of if the cause and what the effect. For example, if you ate too much candy at one time, what would happen? If you practiced playing the piano every day, what would happen? If you never brushed your teeth, what would happen? To add some fun, you might even make it silly if you have a class who can handle that. Maybe, If an elephant jumped into a tiny pool, what would happen? Or If you saw an alien, what would happen? Prepare slips of paper ahead of time with ideas for students to act out. Tell the kids that they may make sound effects but may not use words. You can call for volunteers right away or better yet, put the actors into small groups and give them 5 to 10 minutes to practice before showing the class. The situations you include could be: After every scenario is performed, the class can identify the cause and the effect. Ahead of time, write causes on sentence strips and matching effects on other sentence strips. Make sure there are enough for your whole class. Pass out a sentence strip to each child with either a cause or an effect. Once kids are in pairs, give each child two cards of each color. Next, the pairs work together to come up with four different cause-and-effect events to record on their cards. For example, on one cause card, it might say: The mother bird sat on her nest. The effect card that matches it might say: The baby birds hatched out of their eggs. It started to rain. We took out our umbrellas. Once the pair has finished their cards, they mix them up, place them in an envelope and write their names on the front. The next day, set the envelopes around the room like a scavenger hunt and have pairs travel around the room with their partners to open envelopes, match causes and effects, mix the cards back up, put them back in the envelope, and move to the next open set. An alternative is to use the envelopes as a cause-and-effect center. These little books can be used in cause-and-effect lesson plans and much more! You might want to prep them for little ones, but older kids can usually make their own. Keep it folded and use a ruler to mark off the 3-inch, 6-inch and 9-inch spots near the top and bottom. Draw a line from the top to the bottom at each marked spot. Unfold the page and cut on the three lines from the bottom to the fold. Once the flip book is created, kids draw four causes on the front and then lift each flap and draw four effects underneath. Need enrichment for higher-level kids? Have them draw or write several effects for each cause! Kids use crayons, markers, sharpies or watercolors to create a picture that shows a cause-and-effect relationship. Similar to the above cause-and-effect lesson plan, but instead of unfolding the paper, just leave it folded like a greeting card. I actually like to make the cards fairly small and then they can be grouped together in a little cause-and-effect museum for a fun display. The cards just have to be big enough that the kids can draw or write on them. Use pictures for students to infer cause and effect. This cause-and-effect lesson plan could be done after kids have mastered the basics. Gather some interesting pictures from classroom magazines Scholastic, Weekly Reader and regular magazines, or find them online on free-to-use sites like Pixabay. Look for pictures that have a lot going on in them because kids are going to be looking for several causes and effects, not just one. I would suggest NOT letting the kids search for pictures. Not everything is classroom friendly and even if they were, it

could be a distraction. Glue the picture to the top of a piece of construction paper portrait format or a piece of chart paper. Kids brainstorm and write down lots of different causes and effects for the same picture by looking at it in many ways. More pictures for multiple causes or effects. For this activity, find pictures as before, but this time, glue the picture to the center of the paper. Then kids draw arrows away from the picture and write possible effects. For example, if the picture is of a sunny beach, the cause is the hot sun. Some possible effects might be that the sand is hot, people get sunburned, kids jump in the water to cool off, people sit under umbrellas to stay cool, people put on sunscreen, and so on. The arrows this time point towards the effect and demonstrate causes. For example, if the picture was of spilled milk, the effect is the milk spilled. The causes might be a cat bumped into it, a baby tried to drink from it, it was too close to the edge of the table, a mom poured too much by mistake, kids were playing ball in the house and the ball hit it, etc. Have a scavenger hunt. Gather baskets of picture books with strong cause-and-effect examples. Make sure to select books, either fiction or nonfiction, that target your standard. Kids may work alone or in pairs to read one of the books and find cause-and-effect relationships. Make sure students have either Post-it notes, paper, or a cause-and-effect template one side for causes and one for effects to record their findings. This activity may be repeated several times, with students using different books. Do you have any favorite cause-and-effect lesson plans? *The book, Cause and Effect, Grades [Bulk, Wholesale, Quantity] ISBN# in Paperback by may be ordered in bulk quantities. Minimum starts at 25 copies. Availability based on publisher status and quantity being ordered.*

Try this lesson plan for your kids! There are many different ways that you can teach this skill, and it takes several sessions for the kids to master it. Here is one you can use in the classroom: Differentiate between cause and effect. Identify the cause and effect in a given situation. A crying child A dirty river A big crowd in the mall Ask the students why they think the child is crying or why the river is dirty or why there is a big crowd gathered in the mall. Write down all their answers on the board, arranged in a concept web, with the subject of the video or picture in the center. Afterwards, create another concept web as a class, this time asking them what they think will happen next. After completing the motivation activity, explain to the students that the first concept web represents possible causes for the video clip or picture, while the second one shows the possible effects. Then make a separate chart with two columns for cause and effect. Give examples that the students can relate to very well, such as things that possibly happen to them in school or at home. Here are some examples: Alex did not study for the test- Effect: Alex got a low grade Cause: Jill forgot to eat breakfast- Effect: She has a stomach ache in school Cause: The students won the contest- Effect: They had a celebration party You may do some follow-up activities to reinforce the learning: Let the students read a story or you may discuss a story as a class. Then together, identify the different cause-and-effect situations in the story. Give each student a picture or a sentence, and let them look for the classmate who has a related picture or sentence. After finding their partners, each pair must identify which one is the cause and which one is the effect. You can have them do this in a fun way, such as creating a collage out of magazine cut-outs or making a poster or storybook that shows the cause and effect situations they have come up with. Which one comes first? Give a recap of the things you have discussed and covered in class. Then ask questions that refer to a cause or effect pointed out in the story. Afterwards, you can provide a chart filled up with some causes and effects based on the story, and have them complete it.

### Chapter 6 : Second Grade (Grade 2) Cause and Effect Questions for Tests and Worksheets

*1. Cause Effect With Amelia Bedelia - What a great character Amelia Bedelia is for studying cause and effect. Here is an anchor chart, craftivity and worksheet that you can use along with Amelia Bedelia books to practice identifying the cause and the effect.*

### Chapter 7 : 12 Easy Cause and Effect Activities and Worksheets - Teach Junkie

*"Cause" is the reason why something happened like it did. "Effect" is what happened as a result of the cause. Of course, this is too complicated for beginning readers.*

### Chapter 8 : A Cause and Effect Lessons for First Grade

*Make sure students have either Post-it notes, paper, or a cause-and-effect template (one side for causes and one for effects) to record their findings. This activity may be repeated several times, with students using different books.*

### Chapter 9 : Grade 2 Cause And Effect Worksheets - Printable Worksheets

*24 Cause and Effect Task Cards Cause and effect is an important inferencing, critical thinking and text structure skill for Grades 3 - 6. Use these cards for mini lesson, guided practice, independent practice and/or assessment for ELA.*
