Completely revised and updated for the new Cisco exams: I feel overwhelmed by the information. Can you imagine how frustrating that feels? You see, most authors throw you in at the deep end and expect you to get on with it. They forget that you have a full time job, a long journey back home, family commitments and any number of challenges going on in your life. The last thing you have time for is to write out a detailed study plan with plenty of review sessions. If only somebody could tell you what to study each day, every day. If only you could open your study guide and see which bit of theory to read, which lab to do and which exam to take. You could then get on with the task of studying and getting that exam nailed. Written in response to feedback from thousands of students using my online CCNA in 60 days program, my classroom courses and my other online Cisco training websites this book is the final piece in the studying puzzle. The next day you do the same until you reach the review sessions where you cement all your knowledge with more labs and review as well as some practise exams. If you fall behind no problem, just pick up where you left off. Having a problem with motivation and distractions? No problem, just read the detailed goal setting guide to turbo boost your productivity and motivation. Every subject Cisco want you to know for your exams is covered with labs, theory, exams, reviews and crams. Every exam topic is covered in detail many times over. Just when you think you are ready you are hit with challenge labs and more exams to ensure you are more than ready for the tricky Cisco exams. There are over 60 labs in total.
