Vineberg used the internal thoracic artery (ITA) to achieve indirect myocardial revascularization in , and Green reported direct coronary anastomosis with an operating microscope in

Descrizione It is the practical experience gained in the operating room and on the wards dealing with complications and deviations from the typical or average scenario that matures and fully develops a surgeon. Good results come from experience and experience is gained by making mistakes. This book is therefore designed less to address indications for operations than how to carry them out and provide postoperative care without complications. As some complications, alas, are inevitable, also addressed are the issues of timely recognition and appropriate treatment of complications when they do occur despite best efforts. Indice testuale

Louis, MO Richard J. Louis, MO Anthony D. Louis, MO Alexander S. Introduction Cardiothoracic surgery, including operative techniques and postoperative care, can and should be read about in the several available textbooks by both residents in training and active practitioners. This activity provides the fund of knowledge which is the foundation of surgical competence. However, it is the practical experience gained in the operating room and on the wards dealing with complications and deviations from the typical or average scenario that matures and fully develops a surgeon. This is not the case and reminds me of the observation that good results come from experience and experience is gained by making mistakes. This book is therefore designed less to address indications for operations than how to carry them out and provide postoperative care without complications. As some complications, alas, are inevitable, also addressed are the issues of timely recognition and appropriate treatment of complications when they do occur despite best efforts. In sum, I hope the reader will see and use this book as a supplement to, not a replacement for, standard text books and operative atlases and that it will contribute to an ongoing commitment to excellence in cardiothoracic surgery. Two people deserve my special thanks. Secondly, special thanks go to Lorraine Rinaldi my Administrative Assistant for many years. Her energy, zeal and commitment to excellence in this project have been invaluable and always appreciated.
