Chapter 2 : Refuse Act - Wikipedia

Authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes. Be it enacted by the Senate and House of Representatives of the

Early legislation[edit] Many of the early river and harbor legislation included authorizations for initial surveys of the navigation safety of rivers then used for transportation; as these were developed, authorizations for specific improvements were added. Many of these improvements were driven by the rapid growth in the use of steamboats on inland waters and the great commercial success of the Erie Canal , financed solely by the state of New York. In the Corps conducted an initial survey of the Tennessee River , and in the first steam-powered snagboat was launched at New Albany, Indiana , on the Ohio River. While other works were being implemented by the individual states, the panic of led to a near collapse of federal waterway improvement program. In the Tennessee River was authorized for development, as was the Illinois Waterway , downstream of the state-constructed Illinois and Michigan Canal. While the federal government and the Corps concentrated on navigable rivers, it also assisted in canal work, mostly constructed by individual states. The act includes that the Secretary of War is hereby authorized and empowered to grant leases or licenses for the use of the water powers on the Muskingum River at such rate and on such conditions and for such periods of time as may seem to him just, equitable, and expedient. Provided, that the leases or licenses shall be limited to the use of the surplus water not required for navigation, and he is also empowered to grant leases or licenses for the occupation of such lands belonging to the United States on the Muskingum River as may be required for mill-sites or for other purposes not inconsistent with the requirements of navigation. All moneys received under such leases or licenses shall be turned into the Treasury of the United States, and the itemized statement shall accompany the annual report of the Chief of Engineers. But nothing in this act shall be construed to affect any vested rights, if such there be, of any lessee of water power on said river. Each of these acts identifies hundreds of projects to be built by the Secretary of War under the supervision of the Army Corps of Engineers. Yet for a hundred years after the Constitution was adopted, Congress left the regulation of water power entirely to the states. Federal stream legislation at its beginning had to do chiefly with preventing or removing obstructions to navigation. Starting about this time, river and harbor legislation had to deal with a proliferation of hydroelectric plants and other competing modern multipurpose improvements. List of later acts[edit] "Act to Improve Rivers and Harbors for fiscal year ending June 30, and ", 16 Stat. Prior to this act, all river improvements had been directed toward enhancing the existing channel by removing obstructions and redirecting flows with dikes or weirs. With this act, dams and locks began to be constructed that raised the level of the river in an effort to deepen the river for larger vessels and provide deep water during drought conditions. A year earlier the Corps of Engineers completed their first lock built at Davis Island near Pittsburgh. This act forbade "the creation of any obstructions, not affirmatively authorized by law, to the navigable capacity of any waters, in respect of which the United States has jurisdiction. Andrew Bay , Florida, as well as a study of the most efficient means to move cargo. River and Harbor Act of , July 27, , ch. Although other projects were included with then-standard documentation, the House of Representatives had insisted on voting separately for Grand Coulee and Parker dams. These dams were planned for broader purposes and different funding, which include "controlling floods, improving navigation, regulating the flow of the streams of the United States, providing for storage and for the delivery of the stored waters thereof, for the reclamation of public lands and Indian reservations, and other beneficial uses, and for the generation of electric energy as a means of financially aiding and assisting such undertakings Rivers and Harbors Act of , Pub. River and Harbor Act of , Pub. Titling of these acts over the years has been inconsistent. If the act itself is not self-titled, the convention used here "River and Harbor Act of 19xx" is only for consistency of reference only with the US Code in the recognized database at the Legal Information Institute at Cornell University.
