Central Asia Matteo Fumagalli 7. The influence of civil society activism on regional governance structures in  
the Russian Federation: Entrenching authoritarianism or promoting reform? Civil society in contemporary  
Yemen Vincent Durac 9. Relations between professional associations and the state in Jordan Janine Clark  
Civil society in the digital age: The case of Cuba Bert Hoffmann Reconsidering two myths about civil  
society. Evidence from Afghanistan Kevin Gray. Nielsen Book Data This book examines how civil society  
actors operate under authoritarian constraints, and examines how this is linked to regime change. This book  
moves beyond traditional notions of civil society and explains the complexity of state-society relations in  
authoritarian contexts outside the framework of democratization. Rejecting a wholly normative approach, the  
contributors focus on the whole range of civic activism under authoritarianism, from resistance to support for  
the political system in place. They explain how activism under authoritarianism is subject to different  
structures, and demonstrate how active citizens have tried to claw back powers of expression and contestation,  
but also sought to create a voice for themselves as privileged interlocutors of authoritarian regimes. Civil  
Society Activism under Authoritarian Rule will be of interest to students and scholars of international politics,  
comparative politics, civil society, authoritarianism and regime change. Nielsen Book Data Online.

According to your moral point of view, are they acceptable or wrong? What solution do you think is right today? While some scholars argued that it continued to be an important factor in explaining the way people think politically and vote, others maintained that class had become the dominant force. However, Europe has changed in many ways since then. First, migration has substantially altered the religious composition of Western European societies, and a significant portion of those who migrated into the affluent Western European states are less secularised than the majority of the citizens of the host countries. Second, with the end of the Cold War, religion reasserted its role as an important factor in some countries of the East—Central Europe, most notably in Poland. And third, religion did not just dwindle away to nothing in the secularised societies of Western Europe. The Christian churches and their collateral organisations remained influential political actors, not least due to the simple fact that their links with the political systems are highly institutionalised in many countries. This institutional anchorage provided the Christian churches with sufficient resilience, and religiously inspired debates and conflicts have remained on the agenda of many European nations. Furthermore, the debate mentioned above focused exclusively on Western Europe, and the example of migration highlights the fact that the relationship of religion and politics can no longer be fully understood by focusing on one region alone. The current volume is one of the few books that takes a broadly comparative view. By looking at very diverse countries including, among others, Turkey, Morocco, Israel and Spain, attention is drawn to commonalities and differences between very different religious actors and the way they interact with the political system. The book concentrates on three central and interrelated themes, namely citizenship, secularisation and democracy. The often bemoaned strong involvement of religious actors in issues of citizenship, secularisation and democracy in the countries of the Middle East and Northern Africa does not constitute a fundamental distinction to European countries. To be sure, the democratic credentials of European religious actors may be less doubtful in most cases than is often true for the Middle East and Northern Africa. Yet the fundamental issue of the boundary between religion and the secular state is by no means fully resolved in European countries. In some countries, there is considerable institutional linkage which guarantees the continued influence of religious actors in state affairs. What is more, such privileges may be extended to the religious organisations of immigrants, as the example of Germany shows, where the state actively promotes the formation of Islamic overarching organisations. Hence, religious actors have considerable influence in some of the secular European societies and, arguably, the likelihood of conflicts between them and secular states increases with increasing secularisation. As the progress of medical technology is marching on, it gives rise to a range of ethically charged debates where secular states tend to take pragmatic positions which are likely to be met with resistance by religious communities. This is what the chapters of this book collectively seek to accomplish. While differing in terms of specific issues that encourage them to act politically, religious entities commonly reject the secular ideals that have long dominated theories of political development in both developed and developing countries, appearing instead as champions of alternative, confessional outlooks, programmes and policies. Seeking to keep faith with what they interpret as divine decree, religious entities typically refuse to render to secular power holders automatic material or moral support. They are concerned with various social, moral and ethical issues, which are nearly always political. In addition, many churches and other comparable religious entities no longer restrict themselves to the pastoral care of individual souls. Now, they raise questions about, inter alia, interconnections of private and public morality, claims of states and markets to be exempt from extrinsic normative considerations, and modes and concerns of government. The aim of this book is to examine the current relationship between selected religious actors and the state in Europe and the MENA. Haynes authors

believe are the key analytical issues in this context. Overall, the book is concerned with the outcomes of political interactions involving the state and selected religious entities in various countries in both regions. The key point, however, is not from which religious tradition individual religious actors come. Pursuing such objectives, they use a variety of tactics and methods. Our examples from Israel and Turkey highlight a different context and form of politics. This is where struggles over the role of religion in public life are absent from or marginal to the formal political arena – that is, political society. In sum, these are the main conclusions of the book: Defining religion and politics Before turning to these issues in detail, it is useful to start by seeking to define two of the key terms used in this book: Defining politics is relatively simple: Defining religion satisfactorily is notoriously difficult. Sociologists use two main approaches. Religion can affect the temporal world in one of two ways: It is necessary to distinguish between religion expressed at the individual and group levels: But to move into the realm of politics, as we do in this book, is necessarily to be concerned with group religiosity, whose claims and pretensions are always to some degree political. That is, there is no such thing as a religion without consequences for value systems, including those affecting politics and political outcomes. To try to bring together political and religious spheres in all their varied aspects and then to discern significant patterns and trends is not a simple task. But in attempting it three points are worth emphasising. Both causal directions need to be held in view. Second, religions are creative and constantly changing; consequently their relationships with politics also vary over time. In this book, we are concerned with interactions of religious entities and government over the last few decades. Finally, as political actors religious entities can only usefully be discussed in terms of specific contexts; in the chapters that comprise this book, it is the relationship with government which forms a common focal point. Yet the model of responses, while derived from and influenced by specific aspects of particular 4 J. Haynes religions, is not necessarily inherent to them. The assumption is that there is an essential core element of religion shaping its behaviour in, for example, Christian, Islamic or Judaist societies. The contributions to this book explicitly question this assumption. The focus of many earlier studies was to seek to analyse how existing religious beliefs or affiliations affect political actions. In this book, however, we are equally concerned with the reverse process: Religion and state in comparative perspective To understand the political importance of religious actors in Europe and the MENA, it is necessary to comprehend what they say and do in their relationship with the state. The declared purpose is to try to create and develop forms of consensual – corporate – religion, claiming to be guided by general, culturally appropriate, specific religious beliefs of intrinsic societal significance Hallencreutz and Westerlund In fact, in many countries in both regions, relations between religious entities and the state are now not only more visible but also increasingly problematic. Why is this the case? First, it may be that recent increases in religious challenges to the authority of the state are merely transitory reactions in the context of the onward march of secularisation. Second, even if the modern state is particularly vulnerable to legitimisation crises, it does not necessarily mean that religion is again becoming automatically relevant to state functioning. We can see such a development at three levels: Religion and politics 5 Religion and political society Religion is being liberated from providing slavish legitimacy to secular authority because representatives of religious organisations are now increasingly willing to criticise and challenge the state in various ways in relation to a variety of issues and themes. The issues are themselves secular and in so far as religious agencies are active in these areas, this is a radical shift of concern from the supernatural, from devotional acts, to what are largely secular goals pursued by secular means. However, a note of caution is in order: This is because, as Wilson At the level of political society – that is, the arena in which the polity specifically arranges itself for political contestation to gain control over public power and the state apparatus – we can note a range of religious responses that are in part dependent upon the degree of secularisation. Sometimes, the concept of civil society is used in contrast to political society. Unlike the latter, civil society refers to organisations and movements – not political parties – formally uninvolved in both the business of government and overt political management. Note, however, that this does not necessarily prevent civil society organisations from sometimes seeking to exert or actually exerting political influence on various

matters, including democratic outcomes and the content of national constitutions. The overall point is that religious actors may use a variety of methods to try to achieve their objectives. In other words, when we think of church–state relations we may assume a single relationship between two clearly distinct, unitary and solidly but separately institutionalised entities. Both separation and pluralism must be safeguarded, because it is assumed that the leading church – like the state – will seek institutionalised dominance over rival religious organisations. In sum, the conventional concept of church–state relations is rooted in prevailing Christian conceptions of the power of the state of necessity being constrained by forces in society – including those of religion. Yet when we look at the situation in, for example, Central and Eastern Europe countries under communism from soon after World War II until the early 1990s, there is a different picture. In Western Europe, on the other hand, we can see in most countries a declining regional position over time Religion and politics 7 for Christian churches. In France, for example, as a result of the French Revolution, the demographically dominant Catholic Church placed itself on the wrong side of the ideological divide; the church as a result lost a great deal of its power, privilege and moral authority. The overall point is that in contemporary Europe, state prevails over church, while the political saliency of church–state issues is variable although overall declining in importance as secularisation increases. The differences between Christian conceptions of state and church and those of other world religions are well illustrated by reference to Islam. In the Muslim tradition, mosque is not church. On the theological level, the command–obedience nexus that constitutes the Islamic definition of authority is not demarcated by conceptual categories of religion and politics. There is no validity in separating the matters of piety from those of the polity; both are divinely ordained. Yet although both religious and political authorities are legitimated Islamically, they invariably constitute two independent social institutions. They do, however, regularly interact with each other Dabashi The overall point is that tensions widely exist between secular power and religious organisations in the modern world. It is often the case in both Europe and the MENA that religious entities, regardless of their religious persuasion, work towards reducing the ability of the state to sideline them. They do this by aiming to reverse religious privatisation, a course of action which impacts on a variety of political and social concerns. Religious deprivatisation and political change Two phenomena are simultaneously taking place in Europe. First, there is said to be an increase in various forms of spirituality and religiosity, although this also 8 J. Haynes implies fragmentation and declining societal clout of hitherto leading churches across the region Davie Note, however, that such religious entities, as Casanova The point is that they are normal phenomena. They are examples of private religion. They do not individually or collectively question or challenge the extant arrangements of society, including political and social structures. In addition, in many European Catholic countries – for example, Italy, Poland and Spain – the Catholic Church is losing moral appeal for many people, especially among the young Hooper ; also see the chapters by Ceccarini and Hennig in this collection. In sum, the multiplicity of extant religious phenomena in Europe belies the idea of an inexorable, popular loss of interest in religious meaning – even in apparently highly secular countries. In addition, innovative religious forms appear to be increasing their appeal, often at the expense of traditional religions. But from a political perspective new religions are not of importance. Such religious entities typically resist state attempts to sideline them. First, why should religious organisations seek to become actors with political goals?
