

Chapter 1 : Aliens () - Rotten Tomatoes

Whereas Alien was a space horror type film that was all about mood, tone, and atmosphere, and using the claustrophobia of the ship to produce its scares, Aliens is a rip-roaring balls out action fest.

With interests in science, nature, and the paranormal, cryptid explores fringe topics from a unique and sometimes controversial perspective. How will aliens invade Earth? Can we stop them if they try? If they did, what could we do to stop them? A life form capable of traveling countless light-years to get to our planet would be far superior to us and likely possess technology we can barely comprehend. In that case, we may have a fighting chance. You can say a lot of negative things about us humans, but when it comes down to it we are fairly stubborn and tenacious life forms. We fight tooth and nail with each other, so any invader coming down to this planet with bad intentions certainly will not get a warm welcome. In fact, they will probably get a left hook to the jaw. Or to the pincer. The possibility that aliens will invade the Earth someday is more real than people may think. Of all the supernatural beings alleged to exist, alien life is the only one that is not only plausible but likely. Our galaxy is estimated to hold some billion stars and billion planets. Surely some of those planets support life, and some of that life is intelligent. Some of that life may even come here. What can we do if they decide the Earth is theirs for the taking? Military Assault An invading force from another planet may attempt to conquer the Earth with a military attack. All-Out Alien Attack Aliens may invade the Earth by launching a military-style assault in an attempt to annihilate us. Who knows what tactics they may employ, but taking out our communications satellites seems a logical first move. Then, they may deploy EMP weapons in the atmosphere to disable our electronics systems. The third step might be a massive bombardment of the planet by their warships in orbit around the Earth, with the purpose of destroying major cities and population centers. Finally, ground forces and tactical aircraft will mop up any remaining humans that pose a threat. If their technology is sufficient we may be helpless against such a military strike. However, there are two possible scenarios where we might win out over a superior enemy. In the first, we have to hope they are unable to do serious damage to our population centers and military capabilities with their initial cannonade. In this case, some of the most powerful countries around the world such as the United States, Great Britain, Russia, Australia, North Korea and China may be able to hold their own against alien ground assault troops. The invaders may have better technology, but we are on our home turf and our military forces are very, very good. In the second scenario, humanity is reduced to fighting a guerrilla war. Pockets of resistance around the globe would continue to fight back and try to send the colonizing bullies back to their home planet. Would alien invaders really travel such great distances just to try to take over the Earth? Source Biological Attack Aliens may release a biological weapon causing a worldwide pandemic. Release of an Alien Pathogen If an invading force wishes to take over the Earth they may be able to do it without ever firing a shot. They may be able to engineer a pathogen and unleash it on our planet, making a deadly disease do their work for them. As our population dwindles and our societies erode it may never occur to the last humans alive on Earth that we have been the victims of an attack. Once we are gone, the invaders move in. Sounds grim, but surely super-intelligent aliens would choose a method such as this over a military conflict. So what can we do? Our only hope would be for our scientists and researchers to come up with a cure for whatever disease the aliens concocted. In any event, cures and vaccinations would be our only chance at survival. Some sections of the population may prove to be immune, and very remote human populations may be spared simply by lack of contact with the outside world. So, humanity will go on, but with the way the world is linked together by air travel today it is likely a successful biological attack would mean the loss of billions of lives. What are the Chances of Intelligent Life in the Universe? Environmental Warfare Aliens could use technology to turn the Earth against us. By manipulating natural forces such as weather patterns and plate tectonics other-worldly intruders would be able to destroy huge numbers of us along with the infrastructure we depend on for survival. Here is another scenario where we would likely have no idea that alien forces are at work. Asteroids would batter the Earth. Massive tidal waves hundreds of feet tall would crush our coastal cities. Earthquakes would crumble major population centers. Tornadoes would carve wide swaths across the landscape, demolishing

everything in their paths. Hurricanes would wreak havoc along the coastlines. As lost lives pile up and the cities crumble the remaining population would endure the constant burden of rebuilding roadways, restocking food supplies, keeping the power grid operational and maintaining communication systems. After months or years of a constant battle with the elements the remaining human population would be back to living conditions something like those of the Stone Age. There would be no more advanced technology to rely on, and no resources beyond what we could get from the natural world. So how would we prevent our extinction in such a scenario? Aliens may be able to wipe out millions, even billions of us by controlling the weather, but ultimately their plan must depend on the resulting chaos when our world is suddenly plunged back to a time when there was no electricity, functional government or communication systems. While we may lose our technology in the short term, and end up in a dark-age of sorts, certainly there would be those who remember the science and technology that once made our species great. Once the invaders ceased their campaign of destruction and began to colonize the Earth, the stage would be set for a human uprising and a retaking of the planet.

Population Takeover An alien invader may use threats to coerce world governments into turning their people into forced labor. What if they need us? If their interest in the Earth is not for colonization but for mining its resources it stands to reason they would need a labor force to do the work for them. With sufficient technology a relatively small number of them might be able to take control of the Earth, but they would still need us to do the dirty work. But how would aliens force nearly seven billion people to do their bidding? Ruling out some mind-control method where we all suddenly line up and start packing water to be shipped to Zeta Reticuli, one possible way would be through threats. Perhaps an invasion force would suddenly appear on our doorstep and make it known that unless we provide them with what they want they are going to blow our planet to smithereens. Debates would rage around the globe. Where did these guys come from? Are we willing to part with our resources? Could we take them in a fight? After much debate, and with the total annihilation of the human race a real possibility, Earth leaders might agree and set up a system for collecting the water and sending it to the aliens. The demands for resources and the threats would escalate until we did little more than eat, sleep and gather resources. We would be, effectively, enslaved by an alien invader. The way to defeat such an oppressor is the same as it has always been: Brave people must stand up and fight back, refuse, resist. Our Earth is packed with natural resources an alien invader would covet.

Source Genetic Manipulation Aliens might bring about the extinction of humanity by altering our genes. The **Gradual Degradation of Our Population** Aliens who are intent on invading the Earth may choose to alter our genes as an easy way to wipe us out. For decades believers have said UFOs have been abducting people and conducting experiments. What if the intent is to weaken our species by altering our genetics so we are more susceptible to disease, or so that all humans are eventually sterile? Slight differences in our genes determine our individuality as humans, and the traits we will pass on to our offspring. Because of their genetic traits, some people are more likely to get cancer, less likely to have kids, or more likely to play professional basketball straight out of high school, among millions of other possibilities. What if aliens found a way to ramp up all the bad things we could pass down to our offspring? If they let it play out, eventually they could eliminate the entire human population simply by altering our genes. With nearly seven billion people on our little world the invaders would have their work cut out for them. They would only need to tip the population trend in the other direction. Year after year of declining births and increased deaths would eventually take their toll. The good news in this scenario is that now-living humans would not have to battle alien troops, endure a pandemic, survive endless natural disasters or go to work mining resources for oppressors. The bad news is, eventually humans will become extinct. So, how could the human race survive? Presumably, once a decline in the population was detected on a serious level our scientists would set out to discover the cause. Perhaps our understanding of genetics is already sufficient to create our own program to reverse the trends. Or, new programs could be implemented so that the healthiest humans could pass on their genes. Engineering human genetics is always a controversial subject, but in the face of extinction it may be a necessity.

Hope for Humanity Against an Alien Oppressor These are just five of the possible scenarios of how aliens will wipe out humans and invade the Earth. Certainly there are many more, some more hopeless than the ones in this article. Would humanity survive any of these events? Humans are aggressive, belligerent, stubborn and selfish. These are the traits that have led to

all the wars ever fought, all the atrocities ever committed and all the conflict that exists in the world today. They are also the qualities that might make any alien invader wish they had stayed home. In addition to the negative aspects of our humble race, there are many good things about us as well.

Dirty Rotten Aliens By Mike Resnick - FictionDB. Cover art, synopsis, sequels, reviews, awards, publishing history, genres, and time period.

Back in the day we fantasized about slipping the evil-doer a laxative, though we never actually followed through. Those were mellow days. Bad things happen, you feel powerless to prevent them and you are unable to soothe your tormented psyche afterward. Visions of the wrong done against you play into your fantasies and your dreams. Tortured dreams are something that alien abductees know a lot about. Night terror as a result of alien abduction leaves you lying in bed, flipping and flopping all night long, unable to sleep. The fear creeps into your life from every crack, especially if the crack is near a door or window. Who would you tell? What would you tell them? Pills have no power to prevent aliens from coming to pay you a visit anyway, so you learn to live with the fear of alien abduction. Full of envy, you watch your beloved dogs as they sleep, twitching their feet and yipping in their dreams. The dogs wake up with clear, happy eyes that welcome a new day. If the aliens abduct a no good low-life, they might get the notion that all of humanity is just plain rotten. What if the alien grays decided that we were a bunch of lying, thieving, murdering, conniving, cheating stinkers who spent our lives sticking it to the other guy? Would you respect them? Would you put them up in a five-star hotel with candy on the pillow? Or would you throw them down the rankest hole that you could find? Trust me, they can read your mind and see every hidden corner therein. Someone with an ugly mind would just sink us all. The alien visitors need to encounter the most honorable and honest folks that we have to offer. If you believe in extraterrestrials, if you believe that UFOs are flying the starry night skies, if you believe that space aliens have the ability to do pretty much anything they want to us, then you better start spreading the message that humans should start behaving goodly. Whether you believe it or not, hopefully my true story will open your mind to the reality that humans behaving badly could sink us all.

Chapter 3 : Dirty Rotten Aliens by Mike Resnick - FictionDB

(Dirty Rotten Aliens) An anthology of stories edited by Mike Resnick Science fiction writers have a long and honored history of borrowing and building upon each other's concepts.

The pint-sized detectives deal with crimes that are often "too small" for the police to handle, usually with other animals as their clients. The gang frequently finds itself going up against two particular arch-villains: Mafia-style tabby cat Fat Cat and mad scientist Norton Nimnul. They always think of everyone and whenever someone is in trouble, they are on the case, the gang have hearts of gold and always help others in need and they would never steal anything. Setting The series primarily takes place in a city which is presumably New York City due to the presence of the Chrysler Building in " The Carpetsnaggers " and the Twin Towers in " Robocat " and the Rescue Rangers themselves reside inside of a tree located in a large park in the middle of the city. However, many episodes also take the Rescue Rangers to many different and exotic parts of the world and occasionally to outer space. Unlike the other cartoons that aired during the Disney Afternoon , the world of the Rescue Rangers is mainly dominated by humans while animals are less anthropomorphic. Animals within the world of Rescue Rangers normally cannot speak or be understood by humans and their behavior and appearance tends to vary greatly, with some actually being somewhat anthropomorphic to the point where they dress and act like humans while others are less intelligent or incapable of properly speaking to their fellow animals and may even act like animals in the real world. Humans, however, can understand animals under the right conditions, usually with the aid of magic or technology as shown by the likes of Winifred and Professor Norton Nimnul. A few rare animals have been shown to be capable of actually speaking to humans without any aid, as shown by Butch and Sewernose de Bergerac. Aliens, robots, and the undead have also displayed the ability to understand and speak with animals. In the original idea, the show would center around a team of animals, which included a chameleon, an earlier draft of Gadget, and Monterey Jack with a different name. The main character, though, was an Indiana Jones type mouse named Kit Colby who sported a fedora and a fluffy collared leather jacket. When he proposed the show in a meeting with Michael Eisner and Jeffrey Katzenberg , the idea was well received except for the character of Kit Colby. While Chip and Dale were established characters, to bring them into the series, only their general appearance and broad personality traits were kept. The pair were given clothes -- Chip the clothing of the original concept Kit, while the goofier Dale, incidentally modeled after Magnum, P. The series premiered in on the Disney Channel before moving into a regular slot in weekday afternoon syndication in the fall. Characters The main characters of the series. Heroes Chip is the Leader of the Rescue Rangers. Loosely modeled on Indiana Jones , Chip wears a fedora and a bomber jacket and frequently uses rope to lasso or swing to other spots. Chip tends to be serious and with a strong sense of responsibility, to the point that he is sometimes accused of not knowing how to have fun. He can be domineering and often ends up in squabbles with Dale over his more laid back manner. At times, though, he also lets himself go and joins Dale in some frivolity. Voiced by Tress MacNeille. Though dedicated to the job, he is a fun-loving, mischievous prankster who is sometimes irresponsible and forgets to think before he acts. He spends his free time reading comic books and playing video games. He frequently finds himself being knocked on the head by Chip when he says or does something foolish. Voiced by Corey Burton. Monterey Jack is a fat rat with a red mustache that wears a light brownish coat. His favorite food is cheese, so he is named after a type of cheese. Gadget Hackwrench is a female mouse that has blonde hair and can create and invent things. She is voiced by Tress MacNeille. Zipper is a little blue-green fly who wears a red sweater. He is very close to Monterey Jack. He was introduced as the pet of the nefarious underworld crime lord, Aldrin Klordane. He is voiced by Jim Cummings. Wart , a lizard who dresses in a gangster-style suit and hat similar to his boss. Voiced by Jim Cummings. Mole , a slow-witted but cheerful, this overweight mole wears an undersized red t-shirt and a yellow hat. When plans go wrong, Mole usually is the one who Fat Cat chooses to use as a punching bag. In these instances, Fat Cat is harshly critical of Mole in fact he just might be the most criticized member of the gang. Mepps , a thin alley cat with brown and creme colored fur and dressed in a ratty blue vest and toboggan who speaks with a whiny voice. Whether or not, these adventures involve Fat

DOWNLOAD PDF DIRTY ROTTEN ALIENS

Cat and the rest of the gang is unknown. Voiced by Peter Cullen. Snout, a rat who wears a short-sleeved red turtleneck with a black vest and a dark blue hat that covers his eyes. He is usually only seen briefly. It is possible the Snout joined the gang after the rangers formed and initially defeated Fat Cat because unlike Mole and Mepps who appear in 16 episodes and Wart who appears in 15, Snout only appears in 7. Professor Norton Nimnul, a mad scientist who once worked for Aldrin Klordane. Though Nimnul is an intelligent and creative scientist, his plans often lack any trace of logic and tend to be extremely convoluted. The Siamese Twin Gang, two Siamese cats that own a laundromat and an illegal underground casino. Though not major villains, these two characters have been considered as Asian Stereotypes due to the fact that they own a laundromat and speak in fractured English. They bear a resemblance to Si and Am from Lady and the Tramp. Both of the cats are voiced by Tress MacNeille.

Chapter 4 : Dirty Rotten Aliens : Clive Jackson :

With Gene Siskel, Roger Ebert. Siskel and Ebert review *Dirty Rotten Scoundrels* (), *Tequila Sunrise* (), *_Twins (I)_* and *My Stepmother Is an Alien* () and recommend *Stay Hungry* () and *Wise Guys* () on video.

Chapter 5 : Sic the Space Aliens On Your Enemies | Allie Mars
