

Chapter 1 : E-raamat: Does a Lobsterman Wear Pants? - Barbara Delinsky () | Krisostomus

*While researching background on the lives of Maine lobster fishermen's families for her recent novel *The Summer I Dared*, best-selling novelist Barbara Delinsky was captivated by all the interesting, amusing, and surprising information she turned up.*

Obviously, some books are more worthy than others and get more attention. But a backwater of potentially worthy books pile up. Over time, more books arrive in the mail and the pile of worthies gets taller and tottery. Some books have the misfortune of falling behind the book shelf to languish until the flood. The other day, I addressed the pile and here, finally are three small survivors you may want to take a closer look at yourselves. All slight of size and content, each, nevertheless, has enough cock-eyed charm or eccentricity to recommend it. As bad as these guys try to be, fully admitting to doing their damndest to act like twenty year olds, they are just too decent a bunch of human beings, albeit of the male persuasion. They drink a lot, but they also sail a lot. They talk about sports and women, and they gawk a lot but when the opportunity arises, they run like hell. They take an annual sailing trip to the Caribbean almost every year for ten years, all the while trying to act like ninnies, and doing a lot of bonding, self-discovery and growing up along the way. This little book makes me, as a female, feel a little bit like a voyeur. In fact, he is a biology professor and researcher heavily involved with the health of the marine environment. In this book, Waldman ranges world wide and deep into history to compile this bizarre collection of fishing methods. On the cover of the book, for instance, is a photograph of a man in the middle of a coastal road hauling back a giant sling shot which will cast a railroad spike sinker, hook and bait farther out into the Columbia River than any of his more conventional rival fishermen casting from the bank. Cormorants have been used for centuries and can be trained like a falcon to come to hand, fish in gullet. A cruder method uses a goose with a baited hook tied to her leg. After the fish is hooked, there is a fight to the finish with the goose being dragged under over and over. The goose prevails, the report goes but I have my doubts. Apparently, Saddam Hussein was fond of fishing with hand grenades, a fishing method which gained popularity in the Philippines after World War The book is organized alphabetically which discourages a straight through read, but it is fun to pick up and peruse a couple of entries or a letter section at a time. People are amazing, fishermen, more so! Does a Lobsterman Wear Pants? Delinsky is a popular mystery novelist and as she explains, does reams of research for each book. So for the novel, *The Summer I Dared* the protagonist of which was Noah Prine, lobsterman, she researched lobstering and all that hard-gathered info was doomed to storage after the book was published.

Live Long and Lobster 1. Labor of Lobster Love Why you stuck-up, half-witted, scruffy-looking nerf herder! Lobsters hook up too! The female also called a hen is the aggressor in the mating game. Female lobsters can mate only after molting, putting them at the mercy of the male, who can choose to either fertilize them or eat them. The female molts so her private parts can become available. Han Solo is jealous! A female lobster lays anywhere between several thousand and , eggs at a time. The eggs are no bigger than the head of a pin. At about the 3 week mark, a baby lobster will look like its parents. The odds are 10, to 1 against any larval lobster living long enough to be eaten by a lobster lover. For that matter, it has been estimated that only 1 in 1, animals born in the sea survives to maturity. The antennae are sensory organs. In fact, successful lobster mating depends on their sense of smell. The large pair help lobsters navigate the ocean floor by touching. Along with the legs, the mouthparts contain the taste organs for the lobster. Lobster photo courtesy of GoodmorningGloucester. According to the Lobster Institute, only one in two million lobsters is blue. Live lobsters are a common darkish green and brown lobster. They will turn the familiar red color after they are cooked. One claw on one arm and three on the other. Lobsters normally have one pincher claw and one crusher claw. Claudette was saved from the pot and donated to the State Department of Marine Resources. This was due to the design of the E blaster rifle. Perhaps another explanation is the Stormtroopers were all cloned? It is not until the first year or so that young lobsters begin to favor one claw over another. The two large front pinchers are not symmetrical because they serve different purposes. If the larger crusher claw is lost, the lobster can turn into a southpaw while the right claw regenerates. Sometimes a lobster has two identical claws normally two pinchers. If a lobster loses an eye, however, it cannot regenerate a new one. The cells near the damaged area will begin to divide and to grow a new appendage. It takes several molts probably over several months to regenerate completely a large limb such as a claw in an adult lobster. If the lobster is young and growing quickly, regeneration will take less time. If you are looking for a deal on live lobsters sometimes you can find culls or lobsters with only one claw. But the question remains: Your eyes can deceive you. They are ultra-sensitive to detect movement. The two eyes of a lobster each has 13, lenses and 13, individual nerve rods. Some even say lobsters have x-ray vision. Lobster Pinching Power While lobsters cannot use the power of the Force to wield lightsabers; they do have amazing pinching power. The power is in the closing of the claw, not opening. The crusher claw is the one that produces more force than the cutter claw. But it is always the quick action of the pincher that will bite your finger! If a lobster has you in its grip, hold perfectly still. The lobster will think you are dead and will release its hold. Like the lobster, he swallows his meal whole and lets his stomach do the chewing! Maybe he could use an extra stomach like the lobster. It grips the food and passes it to the stomach for crushing and ingestion. Right behind the first stomach is the pyloric stomach that extends to the abdomen. A lobster will go through the cycle of shedding and filling out its shell as a matter of course throughout its life in order to grow larger. When the lobster has completely filled out its existing shell and can grow no more, a new shell is generated within the old which follows the exact colors, contours, of the visible exoskeleton. Lobsters molt warm waters, typically in the summer months. The lobster slips out in one piece, leaving the rigid armor of the old shell on the bottom of ocean, in perfect shape. It takes about half an hour for a lobster to molt. A lobster sheds its shell, called a carapace, six to eight times before its first birthday. With each molt, a lobster increases its size by about 20 percent. As a lobster grows older and larger, the molts occur less frequently. The American Maine lobster can grow to more than 45 poundsâ€”about as much as a four-year-old child. His name is Rocky. In Maine it is illegal to catch lobsters with body shells longer than five inches. It fired bolts of energy. Lobsters also have blasters; a set of pee blasters! Lobsters pee out of their faces because their kidneys are in their foreheads! These pee-shooters are powerful and can fire up to five feet. Lobster peeing at each other is part of both courtship and combat. Male combat is a way to establish dominance. Female lobsters shoot it as love potion to attract a dominant male. So

DOWNLOAD PDF DOES A LOBSTERMAN WEAR PANTS?

much for lobsters mating for life! The bigger the lobster, the older it is. A lobster is approximately 7 years old before it is legal to harvest, and it will weigh about 1 pound chicken lobsters. They actually become more fertile in their old age. In the end, lobsters grow until they die. The Secret Life of Lobsters: Does a lobsterman wear pants?:
