

Chapter 1 : Key Publications - The University of Auckland

Doing Educational Research (2nd ed.) The second edition of Doing Educational Research keeps the many features that made it such a successful book when it was first released in The research process is broken down into manageable steps with easy-to-understand explanations and concrete examples.

Books Doing Educational Research 2nd ed. The second edition of Doing Educational Research keeps the many features that made it such a successful book when it was first released in The research process is broken down into manageable steps with easy-to-understand explanations and concrete examples. It is designed to support educators at all levels to feel confident that they can undertake sound and ethical research. It is a popular text in research methods courses in New Zealand and widely used internationally. Doing Educational Research is organised around, and answers, many frequently asked questions: Why should we conduct educational research? What are the major approaches? How do you choose the approach that suits your purpose? Where does research fit with theory? Why are ethical and cultural considerations so important? How do you formulate a research question? What are the best methods for gathering data? How do you make sense of data? How do you write up your findings? How do you disseminate them? The why, how, and so what aspects of the research process that underpin these questions are threads woven through the book. A new final chapter extends and updates many of the ideas introduced in the first ten chapters. It covers recent approaches to quantitative, qualitative and mixed methods research. It updates information on research and technology, research ethics, cultural approaches and evaluation. This book will appeal to those new to educational research as well as those who want to refresh and update their understanding.

Chapter 2 : Carol Mutch: The format of a typical research report | Backyard Books NZ

Vicki Carpenter and Sue Osborne Young New Zealanders usually attend school from ages 5 to 16, their formal education encompassing at least 12, hours. Not all reach their academic potential in that time. There is now substantial evidence linking poverty with poor educational outcomes and lifelong disadvantage. The book includes critical insights on issues such as low-decile schools and critical pedagogies, Maori and Pasifika students and the politics of their schooling, the role of the state in providing food in schools, the impacts of neoliberal policies on schooling and curriculum, participatory democracy and social justice, and positive initiatives in low-socioeconomic status communities and schools. *Emerging Critical Scholarship in Education: Navigating the Doctoral Journey* Editors: Jean Rath and Carol Mutch The doctoral journey is fraught with stops and starts, crossroads and blind alleys, surprises and epiphanies. All successful doctoral students navigate a pathway through these events to reach their final destination. Louisa Allen , Mary Lou Rasmussen and Kathleen Quinlivan Pleasure and desire have been important components of the vision for sexuality education for over 20 years. This book argues that there has been a lack of scrutiny over the political motivations that underpin research supportive of pleasure and desire within comprehensive sexuality education. *Knowledge and the Future of the Curriculum: International Studies in Social Realism* Editors: International Studies in Social Realism is about the central purpose of schooling - to provide students with equitable access to powerful curriculum knowledge that is ultimately capable of taking them beyond their experiences. This collection presents a social realist understanding of the role of knowledge as a progressive option in support of social and educational justice. It moves beyond mere critique by offering a rationale for determining what should be taught and how it should be taught. It is an account justified by a theory of knowledge that acknowledges both its social location and its emergent and objective properties. Each chapter argues in creative and innovative ways for a curriculum and pedagogy that will enable all students to access powerful knowledge. It reviews the influences in the post war period that shaped the state response to the right of all children to attend school. Reflections from both education policy makers and parents of that time are included. Practitioners and academics present research findings that indicate alternative ways of thinking and acting that attest to more ethical and humane responses to human difference.
