This fun article is actually an email written to me by a dear friend, Rita. Rita is a rare bird, not a chicken, but a rare bird. She continues to do this work most days in between running team-building exercises at a local rope-climbing course. Beyond those talents listed above Rita has a YOU-nique way with words and analogy. Rita has got it going on. When I read this email from her I knew I had to share it. Morning musings found me recalling "note that word" an aphorism from my childhood: Some of those eggs may take longer to hatch, but hatch they will. But I can impede, delay and interfere, even stop that hatching, by taking them out of the nest and the necessary heat they need for perfect hatching. I have been having great fun this morning counting my chickens, knowing they are hatching and hatching faster, with greater ease than ever, because this is my mission, should I choose to accept it. They are being lovingly, joyously and gratefully counted right here, right now. Those chickens will grow up to lay golden eggs for me because that is their intention. I am honoring their intention and mine. Love how the word intent has a double meaning. Intention meaning my choice. So, I am counting my chickens, knowing they will hatch!!!!!! Is there a potential for roosters in some of those eggs? Oh, I hope so! And, those roosters look so beautiful strutting around my barnyard! And, furthermore, those roosters, wake me up! It also occurs to me that farm women had their egg money, their own independent supply of cash. I am asking you, my blessed, beloved egg hatcher to help me. If you catch me, or even suspect you are catching me, NOT counting my chickens, in whatever state of development they now exist in, call me out! Remind me to be intent on those lovely, wonderful, productive eggs growing and hatching perfectly. I will pray you count your chickens before the hatch. *don't count your chickens before the eggs have hatched* Etymology [ edit ] First attested in English in Thomas Howell 's *New Sonnets and Pretty Pamphlets* in the couplet " Counte not thy Chickens that vnatched be, / Waye wordes as winde, till thou finde certaintee ", possibly based off similar medieval and early modern Latin fables and.

The stories[ edit ] In the East[ edit ] There is a theme common to the many different stories of this type that involves poor persons daydreaming of future wealth arising from a temporary possession. When they get carried away by their fantasy and start acting it out, they break the container on which their dream is founded and find themselves worse off. One of the earliest is included in the Indian Panchatantra as "The brahman who built air-castles". The child misbehaves, his wife takes no heed, so he kicks her and in doing so upsets the pot that was to make his fortune. It appears in Dialogue of the Dialogus creaturarum. In this case it is a jar of honey that she unbalances from her head. When the story reappears in a 16th-century French version, the woman has become a milkmaid and engages in detailed financial calculations of her profits. It would be really nice as it grew up, prancing about and neighing. And so happy was the good woman imagining this that she began to frisk in imitation of her foal, and that made the pot fall and all the milk spill. And down tumbled with it her eggs, her chickens, her capons, her mare and foal, the whole lot. The Merry Milkmaid, after Marcellus Laroon c. The story is briefly told and ends with the pail being dislodged when the girl scornfully tosses her head in rejection of all the young men at the dance she was to attend, wearing a new dress to be bought with the proceeds of her commercial activities. It ends with the maid toppling her pail by superciliously tossing her head in rejection of her former humble circumstances. But the earliest recorded instance of it in the Oxford Dictionary of Proverbs is in a religious sonnet dating from the s. A version of the fable was written by the German poet Johann Wilhelm Ludwig Gleim in the 18th century. The American Symbolist, Albert Pinkham Ryder , painted his "Perrette" some time before , taking its title from the name that La Fontaine gave his milkmaid. She walks abstractedly through a visionary landscape with the bucket balanced on her head. Originally it was called "Girl with a pitcher", but it became so celebrated that it is now better known as "The Milkmaid of Tsarskoye Selo". There is only a copy there today in what has become a public park, while the original is preserved in a St Petersburg museum. One was given by the wife of Nicholas I, the princess Charlotte of Prussia , as a birthday gift to her brother Karl in This was placed in the grounds of his Glienicke Palace near Berlin but was eventually destroyed during World War II ; it is now replaced by a modern copy and is known as Die Milchfrau. One day a girl with an urn Let it drop on the boulder beneath her. Sadly she sits and alone, Uselessly holding the pieces. What marvel is this? For the water pours yet from her vessel. There she continues today, Her gaze on this endless spring. The lyric was set for piano and alto voice in by Cesar Cui [30] and is still performed today.

**Tweet Shares** When we first started raising chickens nearly 5 years ago, our local municipal limit of 30 birds seemed like a very large number. Just barely under the maximum allowed. Some time back, we decided to keep chickens to be more self-sufficient with our food. Raising them ourselves this summer has taught us a few things about raising our own food long term. Keep research and reference materials on hand Even after keeping chickens for several years, this new phase brought so many new questions! How long does it take after you introduce the rooster before the hens lay fertilized eggs? What if you remove the rooster—how long are eggs still fertile? How many days does it take for the eggs to hatch? How many eggs can one hen sit on at a time? What if she gets off the nest? How long after the first one hatches should you wait for the rest? We have several homesteading books on my shelf, but I checked out another whole stack from the library as well. After this experience, I plan to add more specific books for each type of animal we own or want to own, as well as veterinary reference books. Keeping animals can constantly bring new situations, so a well-stocked reference bookshelf is essential. This is largely due to sunlight and length of day. Our second batch of sitting was a total mess. After the first 2 hens hatched out our first 7 chicks out of 11 eggs, 5 FIVE! We had 5 mamas and 23 eggs. But they fought over who was sitting on what, and 4 eggs got left in the cold. Then they squabbled with a non-sitting hen who just wanted to lay her daily egg in the nest box, and 2 more eggs got broken. On it went for 3 weeks, and those 23 eggs only resulted in 8 chicks hatched. Choose which advice to take. Using this method, you can determine if any eggs are not fertile or have stopped developing, and discard them before they become rotten. A rotten egg that breaks in the nest is more than just the worst smell in your life. But we decided against this advice, and good thing, too, because with the 2nd batch of eggs, we had a rotten one. It was a horrible smell! And I have no doubt we would have had some very sick—and potentially never hatched—baby chicks if it had contaminated that nest. Plan first aid for the animals Survival moms spend plenty of time stocking first aid supplies for our kids. But when you raise animals, you also need to have first aid supplies for them. In many cases, this can just mean extra people supplies. So when a 4-day old chick got itself stuck in some wire, we cut him or her out with wire cutters, and were prepared to treat him and isolate him if necessary. In addition, a sick animal—even a chicken—may need to spend some time in isolation to recover. If these animals are your food sources, their health and well-being directly affect yours, so you will need to have a plan and the supplies on hand to treat common injuries and illnesses, including additional pens or shelters. Remember our little chick stuck in the wire? If he had gotten severely injured, we probably would have just put him out of his misery. But in thinking about next year, we realized we needed to pay more attention to this area, as now all of our flock is somehow related to the rest. The result of inbreeding in animals can lead to sub-par production, or to deformity and death. Make sure you plan your own flocks or herds in conjunction with some neighbors or keep records and separate pens to control breeding. The excitement over waiting for eggs to hatch, and watching the teeny baby chicks emerge rivaled birthdays and holidays. B after they come home to roost. C Always count your chickens. Every dang day, count your chickens! The correct answer is "C. Whatever struck down Jaime and the little red hen two weeks ago has spread through the flock, that, or a dog has mangled them, or a ferret got into a coop and bit their heads off As it turns out, one of our Wellsummers and Rhode Island Reds had managed to squeeze themselves up into a roll of garden fencing. The fencing acted like a Chinese finger trap against their feathers so that they could not back out after they got done with whatever the hell it was they were doing in the first place. Why did they think they could squeeze through this, and why did they want to? Mysteries of the chicken mind Marcus only happened to find them because he was moving the fence to get to a trailer he needed to use this afternoon. As he looked down, he noticed an egg resting on top of a chicken butt, which was tightly rolled into the fencing. He gently guided out the chicken and her egg, noticing that the fencing still felt a bit heavy. The other hen had shoved herself up even further into the roll and had also laid an egg. After dismantling the chicken-egg-garden fence burrito, we assessed the damage. Two VERY dehydrated and weak chickens who could barely stand. One was so dehydrated that her comb was completely deflated and pulled into her head. So, of course we needed to isolate the hens to recover in peace. The trailer Marcus was attempting to use when he discovered the "burrito" was perfect to keep the ladies safe and cool. No trailer for him today. The ladies are recovering nicely - eating and drinking on their own and relaxing in the shade. We expect them both to make a full recovery and to continue their mischief where they left off. We have no idea if they were rolled up for one day or three. My guess is at least 2 because of how dehydrated they looked. So the moral of this story is:
