

The IT Essentials course will consume 80 GB of storage per each user pod instance. Details of the storage requirements for each of the lab virtual machines are provided in the tables below.

What is a purpose of the boot manager program? It manages antivirus signature files, encryption keys, and certificates when a device boots. It automates the POST and checks the disk for bad sectors during a boot. It checks the validity of hardware and software on the device after a factory reset. It allows the user to select the OS to use to boot the device. What is the purpose of signature files used to secure mobile devices and operating systems? They contain a record of historical and pending firmware and software updates. They contain a list of all user passwords. They contain a log of digital certificates and encryption keys associated with the user. They contain sample code from known viruses and malware that is used by security software to identify malicious software. The user has full access to the file. Members of the group have read and execute access to the file. Group members are able to modify the file. The user is able to read and modify the file. What is the result of doing a factory reset on a mobile device? The operating system will be updated with the most recent updates and patches. All user data and settings will be deleted. A complete backup of the device is done and all viruses and malware are removed. What tool can be used on a mobile device to display available cellular networks, location of networks, and signal strength? What built-in tool or command can be used to remotely boot the computers?
