

Chapter 1 : Edit text and images in PDFs |

Edit text in the picture by clicking the text to make its box appear. You can then type over existing text, add new text, change its color and perform other formatting tasks.

If a questioned word is spelled correctly, you can confirm its spelling by adding the word to your personal dictionary. If a questioned word is misspelled, you can correct it. This is the dictionary Photoshop uses to check spelling. Optional Show or unlock type layers. The Check Spelling command does not check spelling in hidden or locked layers. Do one of the following: Select a type layer. To check specific text, select the text. To check a word, place the insertion point in the word. If you selected a type layer and want to check the spelling of only that layer, deselect Check All Layers. As Photoshop finds unfamiliar words and other possible errors, click one of the following: Ignore Continues the spelling check without changing the text. Ignore All Ignores the questioned word during the rest of the spelling check. Change Corrects a misspelling. Make sure that the correctly spelled word is in the Change To text box and click Change. If the suggested word is not the word you want, select a different word in the Suggestions text box or enter the correct word in the Change To text box. Change All Corrects all instances of the misspelling in the document. Make sure the correctly spelled word is in the Change To text box. Add Stores the unrecognized word in the dictionary, so that subsequent occurrences are not flagged as misspellings. Find and replace text Do one of the following: Select the layer containing the text you want to find and replace. Place the insertion point at the beginning of the text you want to search. Select a nontype layer if you have more than one type layer and you want to search all layers in the document. In the Layers panel, make sure the type layers you want to search are visible and unlocked. The Find And Replace Text command does not check spelling in hidden or locked layers. In the Find What box, type or paste the text you want to find. To change the text, type the new text in the Change To text box. Select one or more options to refine your search. Search All Layers Searches all layers in a document. This option is available when a nontype layer is selected in the Layers panel. Forward Searches forward from an insertion point in the text. Deselect this option to search all the text in a layer, regardless of where the insertion point is placed. Case Sensitive Searches for a word or words that exactly match the case of the text in the Find What text box. Click Find Next to begin the search. Click one of the following buttons. Change Replaces the found text with the revised text. To repeat the search, select Find Next. Change All Searches for and replaces all occurrences of the found text. Assign a language for text Photoshop uses language dictionaries to check hyphenation. Language dictionaries are also used to check spelling. Each dictionary contains hundreds of thousands of words with standard syllable breaks. You can assign a language to an entire document or apply a language to selected text. Examples of hyphenation for different languages A. Then enter the text. Some type families include a true expanded font, which is designed with a larger horizontal spread than the plain type style. Scaling distorts the type, so it is generally preferable to use a font that is designed as condensed or expanded, if one is available. Select the characters or type objects you want to change. Rotate type Do the following: To rotate type, select the type layer and use any rotate command or the Free Transform command. For paragraph type, you can also select the bounding box and use a handle to rotate the type manually. Rotated characters appear upright; unrotated characters appear sideways perpendicular to the type line. Original type left and type without vertical rotation right Select the vertical type you want to rotate or unrotate. A check mark indicates that the option is selected. Select the type layer in the Layers panel. Select a type tool, and click the Text Orientation button in the options bar. Choose Change Text Orientation from the Character panel menu. Rasterize type layers Some commands and tools—such as filter effects and painting tools—are not available for type layers. You must rasterize the type before applying the command or using the tool. Rasterizing converts the type layer into a normal layer and makes its contents uneditable as text. Some warning messages provide an OK button you can click to rasterize the layer.
