New for EOS is the ability to set the top limit for automatic ISO, allowing users to control the maximum amount of noise in their images. In a first for entry level EOS, exposure compensation and bracketing can be set up to plus or minus five and two stops respectively, allowing the photographer to take a number of differently exposed versions of the same shot to ensure they capture a well-exposed image, even in difficult lighting conditions. The EOS D redefines the entry level DSLR category, putting technologies and features previously the preserve of the professional into the hands of the consumer – allowing them to achieve outstanding results. With the EOS D, consumers are free to explore the limits of their own creative vision. Full HD video with creative control As the ability to record Full HD video becomes increasingly important, Canon continues to deliver DSLR technology that sets the industry benchmark for multimedia functionality. The EOS D records video in full xp HD resolution, allowing photographers to select the frame rate preferred from 30, 25 and 24fps, as well as offering p video at 60 and 50fps. The EOS D also includes a 3. Photographers can also take manual control over exposure settings, changing the depth of field and degree of motion blur to shoot more creatively. To provide the best possible video quality, highlight tone priority HTP can be set independently for movie capture, without changing any still image capture settings. In situations where the subject is further away, the EOS D Movie Crop function records with the central x pixel area of the sensor, creating an effective magnification of approximately seven times. The EOS D is the first in the EOS range to feature Movie Crop and gives consumers more flexibility to capture important moments which would otherwise be too far away. A clear view of your world The EOS D also allows photographers to view their images and video in unhindered clarity. The anti-reflective, water-repellent coating also makes it easier to see the screen in bright conditions and from a variety of angles. It features bigger, more intuitive buttons which have been redesigned following feedback from users. Based on this feedback, the EOS D also features an additional button on the new, battery grip, allowing aperture settings to be changed when shooting with the camera in a vertical position, without having to reorient the body. Share the moment with friends and family For EOS D photographers, shooting great pictures and video is just a first step. The slimline infrared controller can trigger the shutter release from up to five metres away, with users able to select either immediate release or a two second delay for greater flexibility when shooting. Users can take advantage of up to 2GB of personal storage space, creating enough room for hundreds of high-quality images. Mobile browsing is also supported, making it easy for friends and family to view photos on the move. If you take the lens of the camera off there should be a focusing screen above the mirror. If it is there and is not working it may need to be replaced. Try a secondary lens and if the camera focuses then the lens needs to be fixed or replaced. You can check this by engaging the AF switch on the side of the lens and gently turning the focus ring. If the mechanism is intact, you should feel a slight resistance offered by the motor followed by a very low, revving sound. Otherwise, the servo assembly will have to be replaced. Take out the battery and try to charge it. If the display screen is off, press the display button to turn on the display. If it does not turn on make sure your camera is on and functional. If not then you may need to replace the battery or you may have a bad Logic Board. If all else failed you have a bad Logic Board. Also, try pressing the quick menu button on the back of the camera. If this does not engage the screen, there may be a software problem. If there is no battery then install one. If the battery is not charged then charge it. Often, aftermarket non-Canon batteries can cause damage to the camera so try to avoid using these. Check the integrity of your screen by turning the camera on. It may be possible to continue using the camera, since this model has a thick layer of plastic overlaying the actual screen. What you may be seeing is a crack in that outer plastic layer and not the LCD screen. If this is the case, you should be able to see the data being presented by LCD fairly clearly, depending on the severity of the crack in the plastic. If not, then you may need to replace the battery or you may have a bad Logic Board. The shutter release button is built into the top of the body of the camera check the button layout in your user manual. Remove the lens, gently move the mirror out of the way and check to make sure nothing has gotten jammed in the shutter curtain make sure you do not expose the sensor to dust, oil, or fingerprints. Remove the lens and check to make sure that the mirror is not being obstructed by foreign particles. If the mirror does not freely move up and down, then the actuating mechanism for the mirror may be jammed. If the mirror does move, then there may be a firmware issue. To free it, carefully open the lens and manually move the aperture. If it resists, do not apply additional force. Try to free up any obstructions by gently blowing air in a dust free environment into the mechanism. The contacts on either the lens or camera body may have debris blocking communication. Try to clean the lens or camera body. If the problem persists, try a secondary lens. You may also need to replace the lens. Open the camera and check to see if the ribbon cable is intact. If it is, clean the ribbon cable. If it is not you may need to replace the cable.
