Additionally, real-life projects either proposed or created tablet computers, such as: In , computer scientist Alan Kay envisioned a KiddiComp; [16] [17] he developed and described the concept as a Dynabook in his proposal, A personal computer for children of all ages , [18] which outlines functionality similar to that supplied via a laptop computer, or in some of its other incarnations a tablet or slate computer, with the exception of near eternal battery life. Adults could also use a Dynabook, but the target audience was children. In , the idea of a touchscreen tablet that could detect an external force applied to one point on the screen was patented in Japan by a team at Hitachi consisting of Masao Hotta, Yoshikazu Miyamoto, Norio Yokozawa and Yoshimitsu Oshima, who later received a US patent for their idea. Apple Computer launched the Apple Newton personal digital assistant in . The operating system and platform design were later licensed to Sharp and Digital Ocean , who went on to manufacture their own variants. In , Palm, Inc. It was later re-branded as the "Intel Web Tablet". It had slots for SIM cards to enable support of television set-up box. FreePad were sold in Norway and the Middle East; but the company was dissolved in . In , Microsoft attempted to define the Microsoft Tablet PC [38] as a mobile computer for field work in business, [39] though their devices failed, mainly due to pricing and usability decisions that limited them to their original purpose - such as the existing devices being too heavy to be held with one hand for extended periods, and having legacy applications created for desktop interfaces and not well adapted to the slate format. The user interface and application framework layer, named Hildon , was an early instance of a software platform for generic computing in a tablet device intended for internet consumption. They made two mobile phones, the N that runs Maemo, and N9 that run Meego. To get Mac OS X to talk to the digitizer on the integrated tablet, the Modbook was supplied with a third-party driver. Intel co-developed the lightweight Moblin mobile Linux operating system following the successful launch of the Atom CPU series on netbooks. In , Nokia and Intel combined the Maemo and Moblin projects to form MeeGo, a Linux-based operating system supports netbooks and tablets. In , the first plans for Android-based tablets appeared. The first products were released in . Among them was the Archos 5, a pocket-sized model with a 5-inch touchscreen , that was first released with a proprietary operating system and later in released with Android 1. The Camangi WebStation was released in Q2 . This unit was called the Ultra, but a version called Vega was released around the same time. Many more products followed in . Several manufacturers waited for Android Honeycomb , specifically adapted for use with tablets, which debuted in February . Apple is often credited for defining a new class of consumer device with the iPad , [48] which shaped the commercial market for tablets in the following years, [49] and was the most successful tablet at the time of its release. Internet users owned a tablet, used mainly for viewing published content such as video and news. Android tablet sales volume was million devices, plus 52 million, between and respectively. In tablet sales did not increase. Newer models were more expensive and designed for a keyboard and stylus, which reflected the changing uses.
