Attach the images to your email message. Under the Image Attachments section, select **Resize large images when I send this message**. Return to your message, and click **Send**. To help reduce the size of attachments that you send in Outlook, see **Reduce the size of pictures and attachments**. In addition to mail provider limits on total message size, sending large attachments through email is not always the best solution. Sending large attachments to other people counts against your mailbox size quota as well. When you exceed the storage quota, you could be blocked from receiving additional messages. The encoding process causes attached files to become 1. Efficiently share large files There are several ways to share large files and collaborate with other people without sending attachments. For more information, see **Save a file to a SharePoint library**. SharePoint libraries can be accessed directly in Outlook. If your organization uses SharePoint Server and provides you with a **My Site**, you can upload your files to your **My Site Shared Documents** library, and then include a link to the file in your message. You can save Microsoft Office documents directly to **OneDrive**. For more information see, **Introduction to OneDrive**. You can then send recipients a message containing a link to the shared location. On the **Insert** tab, in the **Links** group, click **Hyperlink**. If the shared location path or file name contains spaces, see **Add links containing spaces to an e-mail message**. See **Reduce the size of pictures and attachments**. Consider sharing video clips using one of the methods described in this article or to a video sharing website. When you attach a file to a message, you determine the intended recipient. If you upload a file to a shared location or service, make sure that you understand the privacy and security settings of that site, including who has access to your file.

They range from simple and free tools to pretty complex ones that come at a premium. Wise Folder Hider can help you get the job done easily and for free. You can use the freeware to hide personal files and folders either within your computer or in a removable storage device. Wise Folder Hider uses a two-tier password system for improved safety. The first password gives you access to the program and the second one allows you to hide or expose data. Support for Right-Click Function: You can easily hide files by right-clicking them without opening the program. If Wise Folder Hider is open, you can drag and drop files into it to hide them. Compatible with Flash Drives: You can use the program to hide the contents of an entire flash drive or selected files and folders. However, it is not compatible with external hard disks. Using Wise Folder Hider When we opened Wise Folder Hider for the first time after installation, it asked us to assign a master password that we would use whenever we wanted to access the program. We could use a combination of numbers and letters to create strong passwords. However, we would appreciate it if the program would set the minimum number and types of characters required to create a strong password. This feature can help many people who would resort to shorter and simpler passwords that are easier to guess. We then created a password for hiding our files. Although we noticed that creating the second password was not mandatory, we recommend that you create it because your data would otherwise remain vulnerable if the application is running. We found it relatively easy to use Wise Folder Hider. It allowed us to hide private data by making just a few simple clicks. We used it to hide folders and different types of files, including documents, photos and videos. The program works fast irrespective of the size of the file chosen, and it is intelligent enough to refuse hiding empty folders. It allowed us to handle multiple files simultaneously. The toolbar at the top gives you the option to hide files, folders or USB. The main part of the window provides a list of files. We could use different methods to sort the files, including name, status, lock and operation. We could not trace the existence of the files we hid or access them using other programs. Conclusion Wise Folder Hider is a great application for personal use. If you want to hide private data for business purposes, then you should choose a program that offers stricter encryption. Software Product Description Hide private files, photos, videos and other personal data from your PC for free.
