## Chapter 1 : iPaq to iPhone: My Geeky History with PDA™s | calendrierdelascience.com

*"The Gadget Geek's Guide to your Blackberry and Treo" covers everything readers need to know about smartphones, from choosing the right device to taking advantage of all the functions and capabilities.*

I do not own an iPhone. This is not a review. If iPhone owners would like to point out any technical inaccuracies, feel free to post them in the Comments section below. If only I could. PIC is more than happy to give in to temptation. But this was to be expected: Interestingly, a few sites have reported that most Apple stores still have plenty of stock. Were Apple hoping for a sellout? It will be interesting to see how sales fare once the craze calms down. Real, honest-to-god physical buttons that you can feel without needing to look. This is a completely unavoidable situation on a control surface with no tactile feedback. No getting around it. Visual voicemail is very impressive, but not enough to compensate for the other problems. Finally, only Apple could come up with a phone that requires two steps to hang up from another app and then call it "revolutionary". Treo 1, iPhone 0. Want to quickly fire off a picture to a friends phone? Big kudos to Apple for implementing threaded SMS, a feature pioneered on the Treo, but they still come up short. Treo 2, iPhone 0. Of course, iPhone users still have to contend with a virtual keyboard. Treo 3, iPhone 0. Web And now the tables turn. Blazer is a joke. It was pretty good a couple of years ago, but nowadays is just not up to scratch. All in all, features like the realistic rendering, smart zooming and smooth landscape switching set a new benchmark for mobile Internet that will be hard to match. Camera The cellphone camera is a wonderfully useful thing to have. Even the more advanced 1. The strangest omission is the lack of any kind of video recording functionality. The iPhone is going to require two hands to use in most situations. On a Treo you press the red button. Apple should employ a tap counter. Garnet is ancient and has well-known instability issues, but these are a lot rarer on the newer and p Treos, to the point of being a non-issue. Treo 4, iPhone 3. Extras The iPhone comes with a pretty good built-in software package that should satisfy the needs of most average users. This thing is begging for third-party support, and the Mac developer community is an asset that Apple is foolish to waste. A Treo on the other hand offers an app for almost anything you may conceivably want to do with your phone, from call recorders to games to note-taking apps to shopping lists to diet assistants to password keepers. Replace it with something jazzier like DialByPhoto. Replace them with something more powerful like Agendus or Datebk6. No contest, Treo wins. Treo 5, iPhone 3. It features WiFi, Bluetooth and an array of intelligent sensors that will adjust the brightness, lock the screen and rotate the picture. In short it has everything that Treo owners have been clamoring for for years. Palm should be embarrassed. Especially a first-generation product. You can get a Treo for free nowadays on a contract, and with that you could get an 8GB SD card , a sweet pair of wireless headphones , all the best third-party Palm OS apps and still not pay as much as you would for an iPhone. Feel free to challenge this in the comments, but this little black duck sees a Treo as better value for money. This could change in an instant: Apple are also more likely to issue patches and new features than Palm; their track record with things like the p ROM update is hideous. And eventually, that exorbitant price is going to come down. In the here and now, the Treo is still the best smartphone available: It may crash occasionally.

## Chapter 2 : Editorial: Treo vs the iPhone: 10 Rounds

*Get this from a library! The gadget geek's guide to your BlackBerry and Treo. [Andrew Dagys] -- A comprehensive guide for learning how to operate all the functions on the BlackBerry and Treo smartphones.*

I love these and I know your family and friends will too. Their devices have historically been bulky and lacking the many modern conveniences of other mobile devices such as the Treo. NOT so with the first gadget on my list! This device does it all! More detailed information is available at <http://www.calendrierdelascience.com>. Besides being the biggest pop culture device of the century, the iPod continues to improve and amaze me. Still available in three levels with various sizes and various colors, there is an iPod for everyone. The iPod shuffle 1GB or songs is a little bigger than a postage stamp now and perfect for the gym and running with a clip to attach to your clothing. There is also a full size iPod 30GB and 80GB for or 20, songs respectively , which plays music as well as full length movies and music videos. The videos are clear and bright and great for those people who travel and need entertainment on planes, trains and automobiles. Movies and music are available through the iTunes program, which comes with the iPod and is compatible with Macs and PCs. The new MacBook line is the fastest, most beautiful it comes in white and black and well-designed consumer level laptop made right now. I suggest at least 1GB of memory for maximum performance. It comes loaded with the whole suite of Mac products that make pictures, movies, Web page design, and burning DVDs easy. More details are available at the Apple Web site, <http://www.apple.com>. I have the SD and my vacation pictures this year were just breathtaking. The image quality on this camera is really amazing. Digital cameras have come so far in the past few years. Both models have 7. The only difference between the two models is that the SD IS has an Image Stabilizer that keeps pictures in focus even if you move. More information can be found at <http://www.calendrierdelascience.com>. All those little tapes were such a pain and hard to keep up with. The DC will record in widescreen format for the newer widescreen televisions. It has a huge 2. This is a HUGE feature with video because it is really difficult to remain still and steady while recording video.
