

Chapter 1 : GoPro Hero4 best camera for quadcopters | First Quadcopter

12 13 PRO TIP: If QuikCapture is enabled, you can quickly turn your camera on and immediately begin capturing video or Time Lapse photos just by pressing the Shutter/Select button.

While we recommend you go with a more modern model if you are serious about capturing your extreme lifestyle, we have compiled this as a handy little guide for you to understand how the HD HERO differs from later models and what features it has that you might not know about. It comes with a 1,mAh rechargeable battery, and is a bit bulky in that department, but its solid buttons and nicely rubberized coating provide a solid feeling. That said, the design will not win any prizes for beauty- it looks a bit awkward and outdated compared to more modern GoPro models like the GoPro Hero3 in black. The included mount varies according to the chosen package. Most of the packages include 2-sided 3 millimeter pads that help you attach the device to any surface. The suction cup mount works best for attaching it to fenders or windshields. The device also comes with a harness and a strip for securing the camera in case the mounts fail. In order to mount the camera, you will need to slot in the camera to the receiving end of these mounts. One small drawback of the device is its microphone becomes almost useless when the device is put in the waterproof case. The camcorder features only 2 buttons- a shutter release and another button for tweaking image display- that you will use to operate the device and record videos with. There is a tiny display on the front side which shows the remaining battery life, number of recordings and the activated video mode. The various video shooting modes include p at 30fps, p at 60fps, p at 30fps and p at 30fps. These modes ensure the best combination of frame-rate, viewing angle and pixels. The internal settings of the camera allow quick changing between exposure setting and modes. Recorded videos are stored in a SDHC card. Note that the camera itself does not come with an SDHC card, so you will have to buy on separately. You can charge the device through its miniUSB port which is accessible once you dismantle the device from its plastic handling. A usual day with modest shooting could be covered with a single chart, so battery life will not be a big problem for you likely. It can be said that the new model has been build based on the older models. They share the same mounting system, physical shape, case and user interface. The colors in the recorded videos include decent amount of sharpness and auto-exposure. The wide angle degree lens will help you in making sure that you are not missing any action due to limited field of view. A standard 50 minutes long p video at 30fps should be about 5GB in size. The company recommends its users to use a reasonably fast SDHC card for yielding the best output from the device. A 32GB card will provide more than 5. A tiny annoying fact is the camera starts naming the videos from , and so on every time you clear the memory card. This means you have to rename the files before copying them in the same directory in order to avoid replacing files. During dry sport shooting, sound quality is excellent. When the door is close, it becomes a bit messy, but still does the job to some extent. Record a video with it, and then show the video to someone without revealing the device name. You will have a hard time convincing them that the video is recorded on anything other than a standard-sized camcorder. Available modes include single shot, triple shot and time lapse shots with shot intervals at 2, 5, 10, 30 or 60 seconds. However, the situation changes a bit in indoor conditions. In low or medium light conditions, the video becomes a bit grainy and unnatural. As the camera has limited white balance capabilities, it does not perform well in these situations. All of these problems could be solved during post-production, except the low-light green highlights. Other than that, the device is a very capable, flexible and genius device. It fits perfectly in pockets and powerful enough for shooting in any condition.
