Chapter 1 : Fraction Games Help Kids Conquer Their Fear of Fractions While Having Fun.

*Hands-On Learning Fractions Card Game (Hands-On Learning Math Games) [School Specialty Publishing] on calendrierdelascience.com *FREE* shipping on qualifying offers. Reinforce fraction skills the fun way! The Fractions card game is an entertaining way for students to learn the important concept of fractions.*

Erin Bittman on November 7, These fraction games for kids boost understanding, critical thinking, and social interaction. This activity, designed for two students, is just like the traditional card game War, but with fractions! To prepare the deck, print this free Fraction War cards printable and cut the cards out. Students deal out the deck evenly and place their cards in a pile, face-down in front of them. Students then compare their fractions using the colored fraction bars. The player with the highest fraction gets to keep both cards. This fraction game is great for comparing greater than, less than, and equal to. Do some Newspaper Fraction Dancing. Turn on the music and boogie down! This math activity comes from Mrs. Kids learn about fractions by folding and dancing on newspaper. Take them outside and play Fraction Hopscotch. This fraction game for kids will get your students learning outside. Kids will design their own hopscotch board- with a twist. All of the squares must be labelled with fractions. Go on a Fraction Picnic. For a fun math station, provide a variety of food images cut out of magazines or printed out from the internet. Students will plan a picnic and choose what food they want to bring along. Using a ruler and scissors, they will cut portions of their food choices and glue them to a paper plate. Finally, they will label each item with the fraction name. This is a great activity for practicing fraction skills and understanding the concept of division. Divide students into teams. One child draws an picture that includes a fraction on the board. Their teammates try to correctly guess what the image is as well as the fraction. If their team guesses correctly they get a point. The student who is drawing can divide single objects to represent fractions shown above or they can draw multiple objects. Play Shake and Number Bond. Kids shake the cup and pour the counters on the table. Then, without flipping any of their counters over, they count how many of each color landed face up. For example, if 13 counters were rolled, six red and seven blue landed face up. Six and seven are both parts of thirteen the whole. Have students write the number bond see illustration above and fractions for each color. You could also use 10 frames with this game. After kids spill their counters on the table, they place the counters on 10 frames. Kids see that 13 equals one 10 and three ones, which helps with place value skills. Play a round of Equivalent Fractions Musical Plates. Get children up and moving with this fun, kinesthetic fraction activity. Children are given a fraction and dance around to music, trying to find its equivalent. Give each student a fraction written on a sticky note. Students remember their fraction and stick it on their shirt. Next, lay out paper plates with fractions written or pasted on them. You should make a variety of equivalent fraction plates for each student and spread them far apart so that students will have to really look around to find a plate that is equivalent. Students dance and hunt for a fraction that is equivalent to their own. When they find it, they stand on the paper plate. For each round, students keep hunting for fractions. Once there are no more fractions that are equivalent to their own, they sit out. Posted by Erin Bittman.

Chapter 2 : best Fractions images on Pinterest in | Classroom, Primary school and 5 years

Hands-on Learning Fractions Card Game Reinforce fraction skills the fun way! The Fractions card game is an entertaining way for students to learn the important concept of fractions.

Four different card games provide fraction practice and reinforcement. Objectives follow the rules of the game. Keywords fraction, card game, games, proper fraction, reduce fractions Materials Needed One game comes with a printable fraction card page. One game makes use of regular decks of playing cards with all face cards removed. Two games will require that special decks of fraction cards be produced. Lesson Plan These four card games provide fraction practice and reinforcement. Create decks of 52 fraction cards -- a different fraction on every card. Arrange students into groups of four. Deal the cards, face down, one card at a time until all students have a pile of 13 fraction cards. Students turn over the top cards in their piles in unison. The student with the largest fraction wins the four cards in play. The player with the most cards at the end of the game is the winner. The student with the smallest fraction wins the cards in play. If you teach elementary grade students, print this page , which has on it 24 fraction cards 12 pairs of equivalent fraction cards. Have students cut the cards along the ruled lines to create 24 cards. Turn the cards face down in a grid of 6 cards x 4 cards. Each player takes turns turning over two cards. If the two cards turned are equivalent fractions, the player who turned them over keeps them. If the two cards are not equivalent, players try to remember where they saw the cards. When all cards have been matched, the player with the most cards is declared the winner. If you teach older students, you might create your own decks of cards with more complex fractions. Note that there are examples of four equivalent fraction cards on the printable page provided: This game is for two players. Write a wide variety of fractions on at least 50 index cards. Shuffle the cards and turn the deck upside down. Students take turns flipping over the top card on the deck. If the card turned over cannot be reduced, the first player to slap the card and say it cant be reduced" takes the card. When all the cards are gone, the player with the most cards wins the game. For this game, students can use a regular deck of playing cards with all the face cards and joker cards removed. Deal four cards to each player. Players use the cards they were dealt to make the largest possible fractions. A proper fraction always has a smaller number in the numerator than it has in the denominator. Award Player 3 a point, place all cards from that round at the bottom of the pile, and play another round. The player with the most points at the end of the game is the winner. Assessment Assess students based on their knowledge and use of fractions. Do they recognize equivalent, larger, and reduced fractions?
