## Chapter 1 : Primary Health Care Concepts and Challenges in a Changing World: Alma-Ata Revisited - WH

*Primary Health Care is a new approach to health care, which integrates at the community level all the factors required for improving the health status of the population. Concept of Primary Health Care. PHC is for all especially the needy. Regardless of social and economic status every individual in the nation must have access to good health care.*

Prevention and control of non-communicable diseases. Food safety and provision of selected food supplements. Behind these elements lies a series of basic objectives that should be formulated in national policies in order to launch and sustain primary health-care PHC as part of a comprehensive health system and coordination with other sectors. Improvement in the level of health care of the community. Favorable population growth structure. Reduction in the prevalence of preventable, communicable and other disease. Reduction in morbidity and mortality rates especially among infants and children. Extension of essential health services with priority given to the underserved sectors. Improvement in basic sanitation. Development of the capability of the community aimed at self-reliance. Maximizing the contribution of the other sectors for the social and economic development of the community. Community participation-comprehensive healthcare relies on adequate number and distribution of trained physicians, nurses, allied health professions, community health workers and others working as a health team and supported at the local and referral levels. Multi-sectional approach-recognition that health cannot be improved by intervention within just the formal health sector; other sectors are equally important in promoting the health and self-reliance of communities. Use of appropriate technology- medical technology should be provided that accessible, affordable, feasible and culturally acceptable to the community.
