It was in a subdivision and was practically brand new. But one thing I can say that I miss about that house is the garage. It is such a nice feature to have. Garages are great for storage and to offer protection for your vehicles. So even though we traded in our urban lifestyle for a very rural one, I still hope to build a garage of some sort one day. This article is going to be a good jumping off point for those of you that are like me and in the market for a garage. So here are the plans that will hopefully help you get startedâ€” 1. Or even simply to park a single car. It is shown with vinyl siding. But you could choose other options for a more expensive or less expensive option. It would all be based upon your budget. And this would change the look a little but not the functionality of this structure. The Barn Garage This is an amazing garage plan. It has room for at least 2 vehicles. And then ample amount of room for storage too. And it also looks like a barn. So theoretically you could use it as a barn to store hay and other feed items. While also parking your vehicles or other farm equipment in it as well. But I love how fun the outside of this garage looks. It would really stand out on any property. And add a fun touch of character to your home. Large Detached Garage This is a large detached garage. It has room to park two vehicles and also room to be a great workshop. But if you have them, this would be an amazing structure to have on your property. And if you are in the market for a large storage area then this garage would also work well for that also. So give this one a glance because it is certainly multi-purpose. Double Garage With Porch This garage would cover just about any need you might have. It is a double garage so there is room for 2 cars or storage for other equipment. But there is also a nice amount of room for storage. And on the side of the garage, there is a walkout porch. This would be great to add rocking chairs to and have a sitting area after working outside. But it would also add a nice splash of character to your property as well. And certainly, make it appear more welcoming and like home to your guests. They offer great visuals. And the garage itself is one that I think most would be very satisfied with having. This garage is actually a double which means there is plenty of room to park multiple vehicles or equipment. But there is also plenty of room to use this structure as storage or even as a workshop. So regardless of what the need for a structure is, this garage could most likely fulfill it. Double Garage This garage is a basic design of a 2-car garage. This is good because the more simple the design, usually, the easier it is to construct. It also has an ample amount of room to store your tools , sentimental items, decorations , or even space for a good sized workshop. And I personally love a 2-car garage because it provides the right amount of storage for a family. Single Car Garage This single car garage is nothing to be sneezed at. It has a beautiful design with a large door so you could fit a larger vehicle in it if needed. But this structure could also be used for great storage on top of just a place to park your vehicle or equipment. The Pole-Frame Garage This garage is one that would add plenty of character to your property. It is beautiful with the unique items added to make it stand out as more than just a garage. So if you need a two car garage this would be perfect. And it would give you more space than needed for that sole purpose. Garage With Attached Apartment This 2-car garage is a beautiful structure to have on your property. It is very functional as it can hold multiple vehicles or equipment. And it also gives lots of room for storage. But what sends this structure over the top is the fact that you could potentially place a small apartment over the garage. Or you could simply use that space as extra storage. Either way, it is a great space to have. Two Car Garage With Loft This garage is another beautiful structure that would probably add a great amount of value to your property. But beyond the character factor, this garage offers a lot more. So if you are needing a place that will offer protection for your vehicles or equipment this building certainly should. And it also offers a great storage loft. I love a storage loft because it is so easy to access your belongings. And more storage is never a bad thing. Detached Single Car Garage This detached garage is what you would think of when you think of a typical detached garage. So if you are just needing a basic structure to do the job of

DOWNLOAD PDF HOW TO DESIGN BUILD YOUR OWN WORKSPACE-WITH PLANS

protecting and storing your belongings then this would probably do the trick. It is still a nice looking structure. And one that would be very functional. And functionality trumps pizzazz any day of the week in my book. Though it only has room for one full-sized vehicle it is still a very functional building. And it also has a side entry door which makes getting in and out of this building convenient. Especially if you decided to use it for a workshop or for additional storage. So regardless of what you are needing, this garage could probably rise to the occasion. And any garage that is versatile is a winner to most homeowners. The Western Construction Garage This garage is what many would consider a typical garage. It has space for 2 cars and would be similar to what you would see attached to most houses. However, this garage is detached. And this is actually a good thing because this means it could be used as a workshop and not worry about dragging dust and other particles directly into the house. And if you are worried about getting wet when walking from the house to your car, remember that you could always build a covered walkway. The Green Garage I really like the appearance of this garage. It is a typical A-frame detached garage. It would work well with any modern style house. Especially the typical A-frame vinyl-sided house. And it is also a 2-car garage which is always an added bonus. But the amount of storage that could be had from this one garage is amazing. They just know that they want a garage. The site is filled with tons of free plans for double garages. And a lot of people really love the idea of a double garage. I know when we first began home shopping prior to our homestead we wanted a two-car garage. And they are nice to have. So check this site out and see if you can find your future garage. There are actually 7 parts to it. But it is very detailed and gives you a great visual as to how you would construct a garage all on your own. And if you are wanting to take on this project yourself then this might be an invaluable asset to your project. But beyond the video, this garage is awesome. It is really large and would have room for just about anything you would need to store. So check it out. The Shell Garage This garage might not be for everyone but it is certainly for those that want a garage on a budget. Basically what this shell of a garage is, is a garage with no floor. This helps cut quite a bit of the cost of building it. It could still be used as a great protector of your vehicles and other items. And would certainly make a great workspace as well.

Chapter 3 : 20+ Potting Bench Plans: {Free DIY Projects & Tips} : calendrierdelascience.com

But it is very detailed and gives you a great visual as to how you would construct a garage all on your own. And if you are wanting to take on this project yourself then this might be an invaluable asset to your project.

Here are over 20 free plans for you to review, they offer either complete tutorials or enough details showing you how to make your own. Many provide cutting lists, diagrams and lots of pictures too. The projects below vary from beginner to advanced woodworking skills with both simple and elaborate designs offered—a little something for everyone. Suitable for beginner carpenters. I keep a big plastic tub there with holes drilled in the bottom for drainage to keep assorted pots and seedling trays in. A big bag of potting soil sits on the the other side. Along the edges of the top workspace you can add hooks to hang garden tools. Even if you are planning to build something with more features, this is a nice basic design that you can build tweaks onto easily. And yes, I chose the same beautiful red paint, it looks gorgeous in the yard! This is an easy DIY repurposing a couple pallets and some spare wood. You can see how the two pallets are utilized as the top work surface and the back wall. Hooks are attached along the top of the back slats and around the work surface edge. Notice how both the bottom shelf and the top surface are stained with outdoor stain rather than painted, really makes the whole piece pop. Each leg is made sturdy with a couple 2x4s then each side has another board running across to fit slats of wood on top to act as a shelf for supplies. Easy DIY, but wow, the finished product sure does the trick! This one has a top shelf, wire mesh back to hang garden tools from, sturdy double legs and a spacious bottom shelf. This is a neat idea and pretty easy to pull off. I would keep my eye out for a dresser with at least one deep drawer at the bottom to hold assorted pots and a bucket of soil. Disassemble first then paint or stain each piece to protect it from the weather. Notice the sides have plenty of room for hooks to hang tools, a nice finishing touch would be to fit a piece of painted peg board or lattice along the side so you can move the hooks around as you like. I would also consider removing part of the back top half and replace with lattice or even fit with peg board to hang items. It features a couple shelves and a bin at the bottom, slatted wood work surface and a wire mesh back with a shelf running across the top. They recommend using pressure-treated lumber with high moisture content rather than ordinary framing and trim lumber. Notice how charming it can be with just a bit of paint! One other idea for this would be to tuck it in a sunny corner to hold seedling trays when you start herbs and veggies throughout the season I find I need to start things like Cilantro, Basil and Lettuce every two weeks or so to always have fresh on hand. This would be a nice little piece of furniture in the yard to hold all the little pots. Scroll down the page a bit to find the instructions but spend some time looking at the lovely ideas and additions she added, some great inspiration is to be found! She assures readers that this can be whipped together in just an afternoon. It features a back lattice wall, a recessed bin on the top work surface and a sturdy bottom shelf to hold supplies. This one does not have a detailed step-by-step tutorial, but she shares plenty enough information so you can easily build this out yourself. She took an old, beat-up table, nailed on some wood slats across the top since the surface was so rough and damaged then painted it all and attached an old, painted bookshelf to the top. You can see the side hooks for hanging tools and a small window box attached to the other side that can hold more tools or wee potted plants. The trick is to find the treasures at a garage sale and this can be made for just a few bucks! I love the pigeonholes and wooden shaker pegs to organize small tools, while a sturdy shelf below holds weightier items. The lattice backing always looks so nice on a potting bench and suits the garden perfectly. The wee compartments keep small items and tools close at hand. They recommend attaching furniture slides to the legs to minimize the absorption of moisture from the ground into the wood. This will extend the life of the potting bench and delay deterioration. Great project sheet that has plenty of diagrams, detailed instructions and a cut list. Lots of nice features in this project including plenty of organizing shelves on top, a hatch with hardware cloth to give you a surface that allows excess soil to fall through to a bin on the shelf below. Measures approximately 6 ft. If redwood is unavailable, consider cedar, another good weather-resistant wood. The

DOWNLOAD PDF HOW TO DESIGN BUILD YOUR OWN WORKSPACE-WITH PLANS

overall directions for the potting bench are simple so you do need to know how to work with a plan but you can modify the design according to your needs or style. Download the materials list, cut list, detailed drawing, and step-by-step instructions in pdf format here: I would add a slatted wood shelf along the bottom railings for extra storage. The project instructions are nicely detailed with plenty of photos to help you build this. They used old deck boards to help keep the cost down. This is smaller than what most of us are looking for, but it can be a practical addition to the yard depending on what your needs are. If you have a huge yard, why not tuck something like this in a far corner with just the essentials stocked so you have a convenient spot to deadhead and prune a few potted plants. This is made from an old sewing machine table that has the machine and parts gutted, then painted and fit with a plastic sink. You can protect the top workspace with a cutting board. Features wheels on the front and handles on the back that allow you to move it outside when the weather is nice then store it out of the way in the garage when not in use. There are three free plan diagram sheets to download Top View; Side View; End View , a cutting list provided and a quick video to help. I had trouble with this page using the Internet Explorer browser, if you do too, try another browser like Chrome. The instructions provided are nice and detailed, I just found them fussy to access. This design features a nice slatted wood back to hang sturdy hooks that will hold supplies, even a small bar to hang a towel if you want! The top workspace doubles as a soil bin and planting area. He recommends using pressure treated lumber and the project is reinforced with shelf brackets and corner braces. Nicely detailed tutorial with good instructions and photos. A good starter do-it-yourself project, this is constructed in simple sections, then fastened together with carriage bolts, washers and nuts for easy set up or knock down. The bench features a 6 foot long roof, upper shelves, top work surface and bottom storage shelf. Instructions are available via pdf download and provided by the California Redwood Association [calredwood. Nice tutorial showing how to build a handy bench in just a weekend. This project features two back shelves, a grate covered dirt catcher, a built in potting soil center, side hooks for hanging tools, a work space and a bottom storage area. Complete plans are available 4 pages of instructions , with an illustrated plan graphic that can be downloaded via pdf found here. This is a simple design and perfect for beginner to intermediate woodworkers, nothing too fancy, but it serves its purpose perfectly! The project features a top shelf which has a bracket underneath for extra support, a large waist high work surface, plenty of room on the bottom shelf for storage and sturdy construction with notched framing. You can easily add side hooks for hanging tools if you like I find that a handy feature. Plans are available via the sherrysgreenhouse. A table project for the intermediate woodworker, this is another free set of plans made available by Sunset Magazine. The finished product measures a luxurious 8 feet long with a 5 foot tall back has instructions on how to adjust length to something smaller if you prefer. Features plastic lattice insets that you can use to easily hang tools from using J-hooks as well as cover the bottom storage area. This also has something a bit unique: The plastic lattice panels fit between the modules and are mounted to the framework with sheet metal screws. The plans no longer seem to be available on the site as a download , but the tutorial is still accessible. Offers an alternative solution of buying wheels and steel axle instead. You can view complete instructions online or download a printer friendly pdf version found here , Assembly Plans and a list of materials needed. Every gardener dreams about a sturdy worktop like this one. A simple design using pine framing for both the top surface as well as the bottom shelf. Tutorial is a free pdf download includes step-by-step images. This is one table that will last for years and years! Consider painting this in something bright and pretty and this simple project will be transformed into a show piece for the yard. It features a couple of uprights that will hold a lighting fixture that can be raised or lowered at will using slanted notches on the inside of the uprights the notches are made with a drill and jigsaw. This light will detach when the bench is moved outdoors. Alter the measurements so the finished product is at the height that best compliments your needs, just be sure to adjust other component measurements if necessary. A comfortable working height is well worth the extra effort. If you plan on keeping it outdoors over the winter, clean it as best you can in the Fall then fasten a tarp or plastic sheet over it to protect it from the winter weather.

Chapter 4 : Create a Colorful Kids Workspace with Martha Stewart Paints | Design Improved

A contractor tells all. Plot out your space. When building a workspace in your garage, find out the dimensions of your car and where your doors end up when they're open and tape it out on the ground.

The girls and I spent an afternoon crafting alongside each other. I worked on stenciling the table and cork board, while they each got to decorate a paper mache box to hold special arts and crafts supplies for their workspace. Here is a breakdown of what we did with some tips for you to have your own crafternoon! The girls chose these fun star boxes to practice their stenciling. Here are some steps for stenciling with kids: Also have a wet paper towel or washcloth nearby to wipe paint off of fingers as needed! Help your child smooth out the paint if it is too gloppy kids like to be heavy-handed with their paint! Peel off the stencil to reveal the pretty design - Stella and Hazel loved this part! Stenciling is such a fun way to jazz up a plain cork board. My girls love having cork boards to hang art projects, ribbons, photos, and trinkets on so it makes a nice addition to their play table. How to Stencil a Cork Board 1. Paint the cork board inside the frame with Martha Stewart white paint I used " Snowball ". These thin brushes are great for painting clean lines around the edges of the frame. Let dry and add a second coat if needed. Paint the frame a bright color I used "Aqua". Cut out the stencil you plan to use and remove the paper backer to reveal the adhesive. Position your stencil on the cork board where you want it and smooth it down with your fingernail so the stencil is stuck nicely to the cork and no paint can seep underneath. When I stencil I like to squeeze a small amount of each paint I plan to use on a paper plate. For this rainbow stencil the thin brushes work really well. Just dip the brush in paint and then dab on the paper plate several times to remove excess paint before stenciling. Use an up and down blotting motion to stencil. Repeat the process by peeling off and re-sticking the stencil to the cork board until you have covered the area and achieved the look you want! Stenciling a table is similar to stenciling a cork board. If you are placing stencils around the edge of the table you just want to be a bit more exact with your placement by measuring beforehand. How to Stencil a Table 1. Start by covering the table with a fresh coat of white paint. I used a large foam brush and an 8 oz. To make sure I spaced the unicorns evenly around the edges, I first measured roughly how many would fit around the table and then traced the unicorns on with pencil. Stick the adhesive stencil to the table and dab with a small amount of paint. I gave each unicorn two coats for even coverage, letting it dry between coats. Since I had already outlined the unicorns I did all the pink unicorns first, before switching to the next color to make it easier. I love that we were able to create this creative workspace in an afternoon and that Stella and Hazel got to help it come together. Find the new family-friendly Martha Stewart products exclusively at Michaels! All expressed opinions and experiences are my own.

Chapter 5 : Location & Type of Pool - Plan & Budget - calendrierdelascience.com by Hayward Pool Products

When building your own home with the aid of a build contractor, you can expect to pay as much or more than you would if you were buying a house that's already on the market. Every home is a little different, of course, but for a 2, square foot single-family house, you're looking at an average cost of around \$,

For some people, woodworking is also a money-making activity because they can sell their creation. If you want to start your own woodworking journey, first, you need a workbench. Without a workbench, everything in your workspace is going to be a whole bunch of mess. As a woodworker, you definitely want to build a workbench yourself. If you need some ideas or instructional guides, this is the place. You would have a designated place to work and leave your tools. And it appears to be super easy to build. Which is always an added bonus in my book. I mean, if you have a whole life to build who needs to waste unnecessary time on building a workbench? Stand Alone Simple Workbench This workbench looks amazing. It is a stand-alone workbench that would be great to go in a shed or garage. And it appears to have ample workspace too. But to me, the greatest aspect of it is that it looks extremely easy to build. So if you are on the novice side with your carpentry skills but need a workbench so you can learn more then this would be a great bench for you. The Shanty 2 Chic Workbench These plans for this workbench are pretty amazing. Again, this workbench looks super simple to build. It is a basic style and has wheels on it too so you can move it around your shop for your convenience. How cool is that? But the plans themselves are really great too. You get a picture to help you see what your final product should look like. And you get a great materials list which always makes life easier. All you do is place a woodworking space on top and you have a portable workbench. And what makes it even better is that you will have a ton of storage. If you are anything like my husband, you need the storage space. Plus, it makes everything very accessible and will hopefully encourage you to keep your shop area clean. It basically has everything you could need. Not only does it provide a large workspace. But it also has ample space for storage and places to hang clamps. And it has a place overhead that you can hang a shop light. That will obviously make working on this bench much more enjoyable. And to make it even better, the plans are laid out really well too. And the plans are easy to read as well. So if you find yourself needing a large workspace then this is probably it. But what takes this workbench over the top is the extra shelf included. When the person who designed this came up with it, they added the extra shelf because they always had more mess than workspace. Not a problem with this design. Timber Workbench This workbench is rustic and really cool. So they literally walk you through each step of this build including falling the trees. But what makes this bench look so cool is that some of the bark is left on the legs. And the workspace looks raw. It is a thrifty idea that looks amazing. Garage Workbench With Storage This garage workbench is truly a great workbench. But it also has a lot of storage. You have shelves underneath with drawers so you can store all of your tools out of the way. And it has an open shelf as well which is handy for storing things too large for the drawer. That is always a nice addition to any project. So if you want a large, inexpensive, and heavy-duty workbench then you might just have found yourself one. The Single Shelf Workbench This workbench is a very simple design and appears very easy to build. And the storage shelf it offers is great to just set your tools in their cases beneath the workbench. That obviously makes it easier to grab when you need it quickly. The Novice Workbench This workbench looks fancy but it can actually be broken down and built easily by even a beginner at carpentry. It has a large storage shelf beneath the workbench. But it also has multiple pull-out drawers which are great to store smaller items as well. So if you want a workbench that looks great but is also easy to build then this could be it. Then this could be the workbench for you. But when building that is usually a good thing. It is a simple workbench with an open storage shelf on the bottom. And in addition to the simplicity of the build, this workbench is designed to be sturdy. So whether you are using it to make repairs to machines, build a new piece of furniture, or use it as a potting station this one should hold up to the pressure. The Collapsible Workbench This workbench is so cool. Especially for people that need a workbench in a smaller space. So if

DOWNLOAD PDF HOW TO DESIGN BUILD YOUR OWN WORKSPACE-WITH PLANS

this sounds like you then definitely give these plans a glance. So when you need this workbench it provides an ample amount of workspace. But when you need the space more than the workbench you can fold it down to where it is only a few inches in depth. That is pretty neat. The Workbench Desk So I really like this idea. My husband built it for me. But I really appreciate the extra space that this workbench could offer. However, if you just need a workbench for woodworking and other projects then this would certainly offer an ample amount of space, storage, and convenience. Not only do you have a sizeable amount of workspace, but you also get a ton of storage too. The whole thing is basically storage on the sides and underneath. Which means, whatever you could possibly need to store you could pretty much find a way to store it here. And then take it with you since this workbench is portable. Easy Portable Workbench If you need a portable workbench that is super easy to build and move then this could very well be it. I love this workbench because it is easy to move around. Instead, you can just take your workbench to the item which makes for a ton less lugging things around. And this workbench still has room for storage too. That is really cool! So if you are looking for a DIY workbench that will rock your socks then build this one. Not only does this workbench system come apart and become portable. But it also has the tools built into the workbench. That way if you are working on something that only needs certain tools then you can just break that part of the workbench away and take it to the item. Talk about saving your back. The All-Purpose Workbench This workbench will do exactly what it says. Basically, no matter the project this bench should cover them all. I also love the fact that it follows the classic style. Yet, you should still have a good amount of storage and workspace too. The plans claim that it is sturdy enough not to move around on you while working. And yet it still looks simple enough to build. So if you are a serious woodworker or hope to one day be then you might want to give this workbench a serious glance. It looks to hold a lot. It also appears to have a ton of workspace. So if you need a workbench but are working on a tight budget then give this workbench a glance. You might find exactly what you need at a price that you can afford. The Ultimate Mobile Workbench This workbench has just about everything that you need in a nice mobile package. It has lots of storage space. And yes, this workbench rolls too. But what is even better is that it has an additional workspace that is collapsible so you can use it when needed. But also collapse it for easy storage of the workbench.

Chapter 6 : 20x40 Gable Barn Plans

These free DIY desk plans will give you everything you need to successfully build a desk for your office or any other space in your home where you need an area to work or create. Building a DIY desk can be a beginner to intermediate woodworking project depending on what plan you choose to tackle.

Chapter 7 : Interactive Design - Express Modular

We are going to begin our Kitchen Series I can't wait to dive in and show you all, that you can in fact build your own Dream Kitchen and you don't even have to outfit your workspace with every crazy expensive tool known to man, to do it.

Chapter 8 : small blue printer : design your own house plan

The plans for this project follow those requirements. Regulation corn bags need to be 6-inches square, made from duck canvas and be filled with two cups of corn feed. A set of eight can be purchased online for \$25 to \$
