The bridge is fixed. A simple setup nothing to add. Obviously, it takes some getting used to a length as large not far from a low Access to acute is done without difficulty. As for weight, this guitar is light in spite of appearances, but I do not know if this reflects a guarantee of quality For sound, this guitar is more suited for all or nothing then one and two micro-bottomed pot. In any case, we will not do in the fine I needed an instrument that can go down into the tones. As I am rather rhythm, the seven strings do not really care: I play on a Randall RG I avoid the effects: But I have my good old GT5 when I want to toy. The output level of the microphone is high, it saturates already clear sound. Randall already purring on the origin, with the microphone, it gets worse. Who wants to add the effects you need to take that breath. I got in a famous German online shop Super promo, I paid euros. I emphasize that I use this guitar from time to time when the songs I play require down low. So I recommend this guitar as a complement but everyone is free to do what he wants. The length of the handle is confusing at first. It is also a good way to work the spacings. It is important not too much to ask at the finish but it is very proper for players not too demanding. I have unfortunately not been able to really compare them before my purchase but the price is unbeatable. Did you find this review helpful?

Where can I find information about a particular subject? Probably the easiest way to do this is to use the Search Page. In the Search Page you can enter one or more keywords and a list of pages having those words in it will appear for the user to choose from. There are several possibilities. First of all, there are two types of tuning pegs the little knobs on the headstock that tighten or loosen the strings: In general geared tuners are much less susceptible to slippage than friction tuners. Friction tuners stay in place because of little fibre washers which make it more easy or difficult to turn the peg depending on how tightly the adjustment screw has been turned. With time, the washers become smooth and no longer hold so tightly. Changing the washers will usually solve this problem. A second possibility is that the strings are stretching. Of course changes in temperature and humidity will cause the strings to tighten or loosen and the ukulele always needs to be tuned before playing. For more information about tightening the strings, see the page on Tying Strings to the ukulele pegs and bridge. When tuning the strings should always be tightened to attain the right note. If you go past the correct note, loosen the strings and try to get the right note by tightening the strings once more. Who is "Kawika" and what does "Kawika" mean? Kawika means David in Hawaiian. When I David C. Hurd started the business many years ago, it seemed that a business name that sounded a little more Hawaiian would be appropriate for making ukuleles. My Hawaiian wife Helen approved and that made it official. For more of my life and times, you may wish to peruse a brief Biography. What is the best ukulele for a beginner? If you are a sometime guitar player, then the larger tenor or baritone sizes might be more appropriate for you. A little more information on sizes and tuning can be found on the webpage Strings. At this point, the only entry level instruments that I would recommend are the Kamaka soprano or concert and the Fluke , a concert sized, plastic backed instrument with a surprisingly good tone.
