

Chapter 1 : We've Gone In a Different Direction - Personal Branding Blog - Stand Out In Your Career

By the way, oink, just so other non-native English speakers will not be confused, the phrase is "in a different direction" in English. There must be an indefinite article before the noun direction (you state it correctly once, but incorrectly twice).

No Dealing with disappointment is never fun. Everyone has good days and bad days. When we are dealing with fellow human beings we need to keep in mind that they often want to help. The corollary to that is: Can I ask you a few questions? This is one of those things you can say when given that fluffy and unceremonious line. This is a very good thing. This is not a personal attack. Rather it is a chance to understand how the company or person made their decision. But, it is your chance to gain a little understanding into how they came to their decision. Which will help you in the future at either at this company or in another company. A few questions you may want to ask include: What were one or two things I could improve on in the interview? Was I missing any relevant skills or experience? Do you have any additional suggestions for me? The bottom line is companies want to hire the right people with the right fit at the right time. That should not be your so stopper. The key point to keep in mind here is that you are dealing with another person. Even if that conversation may not be the same one you expected and in the same time frame you expected. A few questions for you: Have you ever been given this line before? How did you respond? What other fluffy and noncommittal lines have you heard? He brings over 20 years of Channel Sales, Partner Marketing and Alliance expertise to audiences around the world in speaking engagements and via his writing. He has worked for Microsoft, Kodak, and K2. He is currently consulting with Microsoft and partners to drive Community Engagement and Alliances. Follow him on Twitter [jshuey](#) or on LinkedIn:

Chapter 2 : Going in a Different Direction | HuffPost

The true remedy is not to be sought in that direction in the one case any more than the other. The view was very extensive but not promising--spinfex being in every direction.

Suicide prevention starts with recognizing the warning signs and taking them seriously. If you think a friend or family member is considering suicide, you might be afraid to bring up the subject. But talking openly about suicidal thoughts and feelings can save a life. To find a suicide helpline outside the U. Understanding suicide The World Health Organization estimates that approximately 1 million people die each year from suicide. What drives so many individuals to take their own lives? But a suicidal person is in so much pain that he or she can see no other option. Suicide is a desperate attempt to escape suffering that has become unbearable. But despite their desire for the pain to stop, most suicidal people are deeply conflicted about ending their own lives. Common misconceptions about suicide Myth: Almost everyone who attempts suicide has given some clue or warning. Most suicidal people are not psychotic or insane. They must be upset, grief-stricken, depressed or despairing, but extreme distress and emotional pain are not necessarily signs of mental illness. Even the most severely depressed person has mixed feelings about death, wavering until the very last moment between wanting to live and wanting to die. Most suicidal people do not want death; they want the pain to stop. The impulse to end it all, however overpowering, does not last forever. People who die by suicide are people who were unwilling to seek help. Studies of suicide victims have shown that more than half had sought medical help in the six months prior to their deaths. Talking about suicide may give someone the idea. The opposite is true—bringing up the subject of suicide and discussing it openly is one of the most helpful things you can do. Most suicidal individuals give warning signs or signals of their intentions. The best way to prevent suicide is to recognize these warning signs and know how to respond if you spot them. If you believe that a friend or family member is suicidal, you can play a role in suicide prevention by pointing out the alternatives, showing that you care, and getting a doctor or psychologist involved. Major warning signs for suicide include talking about killing or harming oneself, talking or writing a lot about death or dying, and seeking out things that could be used in a suicide attempt, such as weapons and drugs. These signals are even more dangerous if the person has a mood disorder such as depression or bipolar disorder, suffers from alcohol dependence, has previously attempted suicide, or has a family history of suicide. A more subtle but equally dangerous warning sign of suicide is hopelessness. Studies have found that hopelessness is a strong predictor of suicide. People who feel hopeless may talk about "unbearable" feelings, predict a bleak future, and state that they have nothing to look forward to. Other warning signs that point to a suicidal mind frame include dramatic mood swings or sudden personality changes, such as going from outgoing to withdrawn or well-behaved to rebellious. A suicidal person may also lose interest in day-to-day activities, neglect his or her appearance, and show big changes in eating or sleeping habits. Are You Feeling Suicidal?: Deal with the Feelings, Overcome the Pain Suicide warning signs include: Preoccupation with death — Unusual focus on death, dying, or violence. Writing poems or stories about death. Belief that things will never get better or change. Self-loathing, self-hatred — Feelings of worthlessness, guilt, shame, and self-hatred. Feeling like a burden "Everyone would be better off without me". Getting affairs in order — Making out a will. Giving away prized possessions. Making arrangements for family members. Saying goodbye — Unusual or unexpected visits or calls to family and friends. Withdrawing from others — Withdrawing from friends and family. Desire to be left alone. Self-destructive behavior — Increased alcohol or drug use, reckless driving, unsafe sex. Taking unnecessary risks as if they have a "death wish. Suicide prevention tip 1: What if the person gets angry? But anyone who talks about suicide or shows other warning signs needs immediate help—the sooner the better. Talking to a friend or family member about their suicidal thoughts and feelings can be extremely difficult for anyone. In fact, giving a suicidal person the opportunity to express his or her feelings can provide relief from loneliness and pent-up negative feelings, and may prevent a suicide attempt. Ways to start a conversation about suicide: The right words are often unimportant. If you are concerned, your voice and manner will show it. Let the suicidal person unload despair, vent anger. No matter how negative the

conversation seems, the fact that it exists is a positive sign. Be sympathetic, non-judgmental, patient, calm, accepting. Reassure the person that help is available and that the suicidal feelings are temporary. Let the person know that his or her life is important to you. Take the person seriously. Argue with the suicidal person. Avoid saying things like: Refuse to be sworn to secrecy. A life is at stake and you may need to speak to a mental health professional in order to keep the suicidal person safe. If you promise to keep your discussions secret, you may have to break your word. Offer ways to fix their problems, or give advice, or make them feel like they have to justify their suicidal feelings. The following questions can help you assess the immediate risk for suicide: Do you have a suicide plan? PLAN Do you have what you need to carry out your plan pills, gun, etc. Moderate " Suicidal thoughts. High " Suicidal thoughts. Specific plan that is highly lethal. Severe " Suicidal thoughts. Says he or she will attempt suicide. If a suicide attempt seems imminent, call a local crisis center, dial , or take the person to an emergency room. Remove guns, drugs, knives, and other potentially lethal objects from the vicinity but do not, under any circumstances, leave a suicidal person alone. Offer help and support If a friend or family member is suicidal, the best way to help is by offering an empathetic, listening ear. Let your loved one know that he or she is not alone and that you care. He or she has to make a personal commitment to recovery. It takes a lot of courage to help someone who is suicidal. Witnessing a loved one dealing with thoughts about ending his or her own life can stir up many difficult emotions. Find someone that you trust "a friend, family member, clergyman, or counselor" to talk to about your feelings and get support of your own. To help a suicidal person: Do everything in your power to get a suicidal person the help he or she needs. Call a crisis line for advice and referrals. If the doctor prescribes medication, make sure your friend or loved one takes it as directed. Be aware of possible side effects and be sure to notify the physician if the person seems to be getting worse. Drop by, call again, invite the person out. Encourage positive lifestyle changes, such as a healthy diet, plenty of sleep, and getting out in the sun or into nature for at least 30 minutes each day. Exercise is also extremely important as it releases endorphins, relieves stress, and promotes emotional well-being. Make a safety plan. Help the person develop a set of steps he or she promises to follow during a suicidal crisis. It should identify any triggers that may lead to a suicidal crisis, such as an anniversary of a loss, alcohol, or stress from relationships. Remove potential means of suicide, such as pills, knives, razors, or firearms. If the person is likely to take an overdose, keep medications locked away or give out only as the person needs them. Continue your support over the long haul. Even after the immediate suicidal crisis has passed, stay in touch with the person, periodically checking in or dropping by. Your support is vital to ensure your friend or loved one remains on the recovery track. Risk factors According to the U. Department of Health and Human Services, at least 90 percent of all people who die by suicide suffer from one or more mental disorders such as depression, bipolar disorder, schizophrenia, or alcoholism.

Last updated by Alessandro Fillari on Oct 16, You are now subscribed [Subscribe](#) for the latest gaming news. Fallout 76 will no doubt be a big change of pace for the series upon its November 14 release on PC, PS4, and Xbox One. Trading out the traditional single-player experience for a shared-world multiplayer survival game, the upcoming prequel sets itself apart from its predecessors in a very clear way. This interview has been edited for clarity and readability. The original concept of Fallout 76 was based on the planned multiplayer mode for Fallout 4. Can you talk about what that original idea was, and how it evolved into what we have now? Yeah, the original idea for 76 was born out of revisiting the concept that we get asked about often, which is multiplayer or co-op in our games. They ask every single time we release a game. It had to be its own separate game and its own separate thing. Was that something the developers had some worries about in the early goings of this game? We knew going in, this is not just gonna be Fallout 4 with multiplayer. For instance, the tone, the vibe, look, and feel of the world can go a long way to give you a sense of familiarity to sort of wrap your head around things. But yeah, this is a really scary and different thing to be a part of. We are fully aware of that. But that all changes when you meet other players. Look, the only way that anybody has previously shared their experiences with Fallout was essentially water cooler talk. A shared, in the moment experience. Did you feel that a more loose approach with the timeline had to be taken in order to keep those familiar aspects of the game intact? There has to be a thought process; what is the rationale? Why would this logically work in this time? Why would there be super mutants, or the brotherhood of steel? How does that all fit and hold together?

Chapter 4 : A Different Philosophy: Looking at Winching From a Different Direction

Taking a look at winching from a new direction—“from behind, with rear winching ideas and accessories.

Four Wheeler Staff

Courtesy of Manufacturers

From the jobsite to the trailhead, front-mounted winches are rather popular. You can even walk away from a Ram dealership with a Power Wagon hiding a 12,000-pound winch behind the front bumper. There is, however, a problem with front winches—they only perform their duties in the front of the vehicle. The rear bumper is also hung up on dry ground, keeping it from going backward. This truck needs a rear winch!

Front-Winch Woes Imagine this scenario. Though wheeling alone is not something we recommend, it happens. The cold winter night is falling and that quick backwoods shortcut that was supposed to shave minutes off your trip has turned to mud. Your rig inevitably takes a nosedive into a snow-covered, sludgy chasm of a mudhole such that no combination of locked differentials, 4-Lo, or horsepower has a chance at budging it forward or back. Faced with the prospect of twisting the frozen freespool lever and fishing for the submerged winch hook, questions arise. Can someone pull the rig out from the rear using shackles and a recovery strap? At this hour, with this poor phone reception, chances are slim. Is winching forward through the muck even a good idea? The remainder of the shortcut could still be a gooey minefield, offering more chances at getting stuck, even if you escape the current hole. A winch on the backside of the 4x4 sure seems like a dandy idea now.

Rear-Winch Bumper Want a winch in the rear of your rig? Mount it just like you would in the front—using a winch bumper. Weight and cost, however, might need to be considered. It comes fit for many popular fullsize trucks and is a stylish way to mount and protect a winch on the back of your vehicle. The bumper weighs pounds and can be purchased with or without the Dual Directional Tire Carrier.

Winch Cradles Bridging the gap between front- and rear-mounted winches is the winch cradle. With most made to fit standard 2-inch receivers, the winch remains bolted to the cradle, and it can be moved between the front and back of the vehicle as desired. With the winch cradle installed, the approach and departure angles of your vehicle will be decreased, and care must be taken to avoid running the winch into obstacles. Also remember that winches are not lightweight, and moving a cradled winch between bumpers and storage can be tiresome, maybe even dangerous in mud or snow. Pulling from an angle which is not advised, even with bumper-mounted winches, can bend the cradle. The Multi-Mount is said to fit standard 2-inch receivers. The cradle accepts up to a 12,000-pound winch and is supplemented by three separate lockable storage compartments for recovery straps, gloves, and tools. The Black Box also features a pair of D-ring shackles and forward-facing lights, and it is said to fit standard 2-inch receivers.

Bed-Mounted Winching is all about creativity, especially when mounting winches in places other than the bumpers. A bed-mounted winch can be as simple as a 2,000-pound unit for loading fullsize spare tires and cargo, or as extreme as a 9,000-pound winch with the hawse fairlead mounted in the tailgate. As a bonus, bed-mounted winches can also help coax payloads onto trailers, should the need arise. These winch configurations can hinder the cargo-carrying capabilities of a truck bed, especially if the space is used for hauling rocks, logs, or dirt that could harm a mounted winch.

Power Up Planning a rear winch install must involve getting power from the battery to the winch. In some cases, a rear battery and jumper cables may fit the bill, but with that comes the cost of a new battery, deciding where to mount it, and how to keep it charged. For a more permanent power solution, Tuff Stuff has a foot, 2-gauge wiring kit designed to get 12V power from the battery in the front to the back of your rig.

Hidden Winches With some creative cutting, welding, or chopping, winches can be tucked out of sight between the framereils of most rigs. In addition to the custom bumper, this winch blue truck, left was mounted with its feet forward to eliminate shear stress on the four mounting bolts. To achieve this position, the winch drum was clocked 90 degrees. Again, this required clocking the winch drum, extending the clutch lever, and relocating the solenoid, but the result was a clean look and a hidden winch. These options may require more hands-on work than a simple winch bumper, but can also maintain factory departure angles and shelter winches from the elements.

Why Not Buy Two? Buying a winch for the front and back of your rig might not be as far-fetched of an idea as it used to be. Sure, buying one winch and a portable cradle can be cheaper, but with some coupon clipping and shrewd shopping, you can bring home two winches for nearly half of what you could spend on

just one.

Chapter 5 : 'We're Moving in Another Direction' | HuffPost

Print Advertisement This question would seem to be one of simple physics, and yet it continues to engender sharp disagreements. The main problem here is the division between theory and practice: This can be visualized if you imagine putting a pan of water on a turntable and then spinning the turntable in a counterclockwise direction, the direction in which the earth rotates as seen from above the north pole. The water on the bottom of the pan will be dragged counterclockwise direction slightly faster than the water at the surface, giving the water an apparent clockwise spin in the pan. But if you were to look at the water in the pan from below, corresponding to seeing it from the south pole, it would appear to be spinning in a counterclockwise direction. Likewise, the rotation of the earth gives rise to an effect that tends to accelerate draining water in a clockwise direction in the Northern hemisphere and counterclockwise in the Southern. Decker, professor emeritus of oceanic and atmospheric science at Oregon State University notes, however, that the Coriolis effect may actually have little to do with the behavior of real-world sinks and tubs: The local irregularities of motion are so dominant that the Coriolis effect is not likely to be revealed. An empirical test could help. If you had a specially prepared bathtub, the answer would be yes. For any normal bathtub you are likely to encounter in the home, however, the answer is no. Imagine a cannon fired southward from any latitude above the equator. Its initial eastward motion is the same as that at a point on the spinning earth. This initial eastward velocity is less than that at a point later in its trajectory, because points closer to the equator travel in a bigger circle as the earth rotates. Therefore, the cannon shell is deflected westward to the right, from the perspective of a person standing on the earth. A gunner firing a cannon northward would find that the shell is also deflected toward the right. These sideways deflections are attributed to the Coriolis force, although there really is no force involved--it is just an effect of being in a rotating reference frame. The circulation directions result from interactions between moving masses of air and air masses moving with the rotating earth. The effects of the rotation of the earth are, of course, much more pronounced when the circulation covers a larger area than would occur inside your bathtub. Even in a tub having a perfectly symmetric drain, the circulation direction will be primarily influenced by any residual currents in the bathtub left over from the time when it was filled. It can take more than a day for such residual currents to subside completely. If all extraneous influences including air currents can be reduced below a certain level, one apparently can observe that drains do consistently drain in different directions in the two hemispheres. For a fee, they will allegedly demonstrate that the toilets flush in opposite directions. It is only for show, however; there is no real effect. Yes, there is such a thing as the Coriolis effect, but it is not enough to dominate the flushing of a toilet--and the effect is weakest at the equator. Coriolis acceleration at mid-latitudes is about one ten-millionth the acceleration of gravity. Because it is a very small acceleration, it needs a very long distance for it to produce an appreciable curvature--and hence directionality--to the motion. A toilet or sink is just not large enough. The Coriolis effect influences because wind velocities may be hundreds of times greater than the motions in a sink and because the distances involved are far larger than the tiny draining diameter in a sink or toilet. The net motion in the water becomes much more pronounced as the water is forced to move in toward the center of evacuation, causing the normally invisible flows in the water to become visible as the water nears the drain. The ultimate direction of that flow is random--it can go one way one time, the other way the next. But you will find that the faucet is almost always off center or that there is some other asymmetry in the sink. As a result, filling the sink consistently gives it some net rotation in the same direction, which you see as the normal direction of evacuation. Toilets will always drain and fill the same way, for the same reason.

Chapter 6 : Does Water in a Drain Go a Different Direction in the Southern Hemisphere?

a bonus. The time before that, I was privy to some confidential information. Prior to that, I was yelled at because I

inadvertently offended a customer by being too concerned with.

Chapter 7 : in a different direction | WordReference Forums

Your company culture is crucial to the success of your business. Without the right culture, you risk failing in every aspect of your market. So use the culture tips below to make sure that it is going in the direction that you want it to go.

Chapter 8 : Boston Bruins "probably going in a different direction" from backup goalie Anton Khudobin

"We're moving in another direction" is a totally bogus phrase. It's meaningless -- a euphemism with no soul that delivers no useful information or feedback to the person to whom you are supposedly.

Chapter 9 : Suicide Prevention: How to Help Someone who is Suicidal and Save a Life

Instead of having to actually provide an explanation for the firing (or retirement or non-renewal or separation) -- too old, not winning enough for the alumni, too many complaints from parents of.
