

Chapter 1 : Inter-City Auto Transport | Better Business Bureau® Profile

Intercity Lines has proudly been offering first-rate service in the automobile transport business since We are a family owned business that takes pride in providing door-to-door service with the highest quality fleet of trucks which feature state of the art, fifty-three foot fully enclosed air ride trailers.

Stagecoaches[edit] Behind time, anonymous engraving of a stagecoach in England. The first intercity scheduled transport service was called the stagecoach and originated in the 17th century. Crude coaches were being built from the 16th century in England, but without suspension, these coaches achieved very low speeds on the poor quality rutted roads of the time. By the mid 17th century, a basic stagecoach infrastructure was being put in place. This was followed by a steady proliferation of other routes around the country. The coach would depart every Monday and Thursday and took roughly ten days to make the journey during the summer months. They also became widely adopted for travel in and around London by mid-century and generally travelled at a few miles per hour. These trusts helped to stimulate a sustained period of road improvement in the 18th century. The speed of travel remained constant until the mid century. Reforms of the turnpike trusts , new methods of road building and the improved construction of coaches all led to a sustained rise in the comfort and speed of the average journeyâ€”from an average journey length of 2 days for the Cambridge-London route in to a length of under 7 hours in Robert Hooke helped in the construction of some of the first spring-suspended coaches in the s and spoked wheels with iron rim brakes were introduced, improving the characteristics of the coach. It was advertised with the following announcement: This coach took an unprecedented three days to reach London with an average speed of eight miles per hour. Even more dramatic improvements to coach speed were made by John Palmer at the British Post Office , who commissioned a fleet of mail coaches to deliver the post across the country. The era saw great improvements in the design of the coaches, notably by John Besant in and His coach had a greatly improved turning capacity and braking system , and a novel feature that prevented the wheels from falling off while the coach was in motion. Each wheel had two durable steel leaf springs on each side and the body of the carriage was fixed directly to the springs attached to the axles. Coaches in this period travelled at around 12 miles per hour and greatly increased the level of mobility in the country, both for people and for mail. Each route had an average of four coaches operating on it at one time - two for both directions and a further two spares in case of a breakdown en route. Motorbuses[edit] The development of railways in the s spelt the end for the stagecoaches across Europe and America, with only a few companies surviving to provide services for short journeys and excursions until the early years of the 20th century. Standerwick of Blackpool , England acquired its first motor charabanc in , [12] and Royal Blue from Bournemouth acquired its first motor charabanc in A Chevrolet bus of Nepal Transport Service in In , Royal Blue took advantage of a rail strike to run a coach service from Bournemouth to London. The service was so successful that it expanded rapidly. Frustrated about being unable to sell a seven-passenger automobile on the showroom floor of the dealership where he worked, he purchased the vehicle himself and started using it to transport miners between Hibbing and Alice , Minnesota. He began providing this service regularly in what would start a new company and industry. In , Pennsylvania was the first state to pass regulations for bus service in order to prevent monopolies of the industry from forming. Many expanded from simple stops into major architecturally designed terminals that included shopping and other businesses. For example, in Canada in the s, million passengers boarded intercity bus service each year; in the s, this number declined to 50 million. During the s, it was down to 10 million. Coach bus Intercity buses, as they hold passengers for significant periods of time on long journeys, are designed for comfort. A sleeper bus is an example of a vehicle with optimum amenity for the longest travel times. Route and operation[edit] An intercity coach service may depart from a bus station with facilities for travellers or from a simple roadside bus stop. A coachway interchange is a term in the United Kingdom for a stopping place on the edge of a town, with connecting local transport. Park and ride facilities allow passengers to begin or complete their journeys by automobile. Intercity buses may run less frequently and with fewer stops than a transit bus service. One common arrangement is to have several stops at the beginning of the trip,

and several near the end, with the majority of the trip non-stop on a highway. Some stops may have service restrictions, such as "boarding only" also called "pickup only" and "discharge only" also called "set-down only". Routes aimed at commuters may have most or all scheduled trips in the morning heading to an urban central business district, with trips in the evening mainly heading toward suburbs. Intercity coaches may also be used to supplement or replace another transport service, for example when a train or airline route is not in service. Safety[edit] Statistically, intercity bus service is considered to be a very safe mode of transportation. For example, in the United States there are about 0. Intercity coach travel by country[edit] Canada[edit] Intercity coach service is very popular on routes to smaller urban centres not served by Via Rail as well as in areas like the Corridor, especially amongst students, where large operators like Megabus, Greyhound Canada, and Coach Canada operate very frequent services. Other major operators in the corridor include Voyageur, Intercar, Limocar, and others. Ontario Northland operates a bus service from Toronto to the Hudson and James Bay frontiers at the extreme north of the province. In the Maritime Provinces, intercity buses are operated by Maritime Bus. In, cuts to service were announced by Greyhound Canada in Alberta [30] at the same time that Acadian Coach Lines announced its pending closure in Atlantic Canada. Hong Kong[edit] There are numerous inter-city coach services between Hong Kong and various cities of Guangdong Province, e. Shenzhen, Guangzhou, Zhongshan and Zhuhai. These kinds of coaches are legally classified as a kind of non-franchised public bus, as "International Passenger Service". Germany[edit] Intercity coach service in Germany became important in the decades following the Second World War, as the Deutsche Bundesbahn and the German federal post office operated numerous bus routes in major cities and metropolitan areas associated with each other. While rail was quicker and more convenient, the buses were a low-cost alternative. With the increasing prosperity of society and the growing use of the automobile, the demand fell significantly and most of these lines were abolished in the s and s. One exception was traffic from and to West-Berlin. A long-distance bus network linking Berlin with Hamburg and several other German locations was created at the time of German division because of the small number of train services between the cities. It still exists today. Until new long-distance bus lines could only be added in accordance with "Passenger Transportation Act" PBefG, meaning if they did not compete with existing rail or bus lines. Since Germany - in contrast with many other European countries - has a well-developed rail network to all major cities and metropolitan areas, the domestic marketing of long distance buses in Germany was much less significant than in many other countries. The existing lines were often international lines as exist in almost all European countries, and for the transportation within Germany, there was a ban. Meinfersbus and Flixbus fused to create a common company currently the biggest operator of long distance buses in Germany while City2City folded operations. Deinbus came close to bankruptcy but secured an investor in time. It was founded in Ireland[edit] Generally slower than rail travel with refreshment and toilet stops required on longer routes. Some bus services run overnight. Israel[edit] Because of the weak-developed rail network and the small size of the country and the resulting low domestic air traffic, the long-distance bus cooperative Egged is the main public transport service in the country. Because of the widespread network, Egged is considered one of the largest bus companies in the world, in part because of the long-distance bus lines. However, in recent years Israel railways has expanded and upgraded its route network and other companies have taken over routes previously served by Egged. Netherlands[edit] In the relatively small Netherlands there is a limited number of long-distance routes within the country. In, the Interliner -network started with express buses on connections devoid of rail transport. Owing to high fares, a dense rail network and other reasons, the Interliner network fell apart into several different systems. In, only a limited number of express buses existed as regular public transport usually under the name Qliner.

Chapter 2 : Intercity Transport Marguerite Pkwy Mission Viejo, CA Medical Transportation - MapQuest

At Intercity Lines, America's premier enclosed auto transport company, we provide a full array of services including: Vintage racecar transportation to and from the track and storage while at the meet.
