Chapter 1 : Amendments to the International Aeronautical and Maritime Search and Rescue (IAMSAR) Manual

The International Aeronautical and Maritime Search and Rescue (IAMSAR) Manual is a manual for organization and operation of maritime and aviation search and rescue.

Danish air force Squadron , Danish navy air squadron , naval home guard and the Danish Maritime Safety Administration , coordinated by the Joint Rescue Coordination Centre, operated by the navy and air force in the Danish Naval Commands facilities near Aarhus. Internationally the Danish works mainly with Germany , Norway and Sweden. To increase the operational area, Pembroke twin-engined fixed-wing aircraft were employed for search. These aircraft would localize the distressed persons and the Ss would then rescue them. The SAR service was started to respond to fighter-plane crashes as 79 aircraft crashed, with 62 dead, in the period 1950-1955. These were primarily meant for the ships patrolling the North Atlantic, but also supported the Ss. In 1956 the seven Ss were replaced with eight Sikorsky SA helicopters. In 1957 radar was installed and in 1958 FLIR was added. Further avionics and navigation systems, including GPS , have also been added over time. In 1960 the naval air squadron was re-established as an independent squadron in the navy and had their Alouette IIIs replaced with Westland Lynx helicopters. Their primary operational area was still the North Atlantic, but they continued their support role, although this was reduced with the introduction of the Ss. Wikimedia Commons has media related to Rescue helicopters in Denmark. In 2009 the Danish Defence held a public display in Horsens , to raise awareness about rescue services and maritime safety. Maritime SAR is important because Denmark has a relative long coast line to its land mass. When the sea water temperatures are low a helicopter is also deployed to the island of Bornholm in the Baltic Sea. The Lynx operates from Karup. Maritime vessels are spread out through the entire coastline and on islands. The Ss and EHs have a crew of six: Two pilots , a navigator , a flight engineer , a physician and a rescue swimmer. The Estonian Border Guard Piirivalve is the Estonian security authority responsible for the border security. It is the main support organisation for search and rescue missions in Estonia, and operates a small fleet of SAR vessels and helicopters. These organizations alert and decide on the most suitable response for the location and situation. The DGzRS is a non-governmental organization entirely supported by donations. It is, among other things, regularly involved in urban search and rescue efforts abroad.

Chapter 2 : Search and rescue - Wikipedia

Jointly published by IMO and the International Civil Aviation Organization (ICAO), the three-volume IAMSAR Manual provides guidelines for a common aviation and maritime approach to organizing and providing search and rescue (SAR) services.
