

## Chapter 1 : The international crude oil market handbook (Journal, magazine, ) [calendrierdelascience.com]

*Bringing together a wealth of proprietary and essential data, World Crude Oil Data has proved an invaluable tool for traders, analysts and planners in the 17 years since it was first published as the International Crude Oil Market Handbook.*

Oil depletion and Peak oil Peak oil is the period when the maximum rate of global petroleum extraction is reached, after which the rate of production enters terminal decline. It relates to a long-term decline in the available supply of petroleum. This, combined with increasing demand, will significantly increase the worldwide prices of petroleum derived products. Most significant will be the availability and price of liquid fuel for transportation. The US Department of Energy in the Hirsch report indicates that "The problems associated with world oil production peaking will not be temporary, and past "energy crisis" experience will provide relatively little guidance. The decline on oil price during " is considered to have contributed to the fall of the Soviet Union. The reduction in food prices that follows lower oil prices could have positive impacts on violence globally. A lower inflation rate is good for the consumers. This means that the general price of a basket of goods would increase at a bare minimum on a year to year basis. Consumer can benefit as they would have a better purchasing power, which may improve real gdp [53]. However, in recent countries like Japan, the decrease in oil prices may cause deflation and it shows that consumers are not willing to spend even though the prices of goods are decreasing yearly, which indirectly increases the real debt burden. The oil importing economies like EU, Japan, China or India would benefit, however the oil producing countries would lose. It shows the GDP increase between 0. Katina Stefanova has argued that falling oil prices do not imply a recession and a decline in stock prices. But nothing guarantee[d] such price levels in perpetuity". At the same time, U. A combination of factors led a plunge in U. The most vulnerable economies were those with a high dependence on fuel and mineral exports to China, such as: On the other hand, lower commodity prices led to an improvement in the trade balance " through lower the cost of raw materials and fuels " across commodity importing economies, particularly Cambodia, Kyrgyzstan, Nepal and other remote island nations Kiribati, Maldives, Micronesia F. S , Samoa, Tonga, and Tuvalu which are highly dependent on fuel and agricultural imports [67] The North Sea oil and gas industry was financially stressed by the reduced oil prices, and called for government support in May
