It quickly became clear that he knew what he was talking about, but was motivated by curiosity rather than criminality. Obviously crackers are a more diverse group than the criminal masterminds and script kiddies of popular imagination. To my surprise he agreed to be interviewed for this blog and I jumped at the chance to find out a bit more about the shadowy world of cracking. How did you get into cracking software? I graduated in software engineering about 10 years ago and started out seriously cracking software in my first year at University. The first PC experiences I can recall were studying some very early Phrozen Crew cracks and the Quox virus that someone gave to me on a disk. Do you also write software? Is your day job in the IT industry? What is the motivation for cracking software? Motivation for cracking really seems to vary. Is cracking an individual activity or is it organized? The answer is both, but that is an oversimplification. A lot of authors are often quite surprised to find their software on the cracking scene radar. What is your attitude to intellectual property? What do you think of those that do? I can understand the attraction of cracking as an intellectual challenge. But why do some crackers then release the cracks? What do they gain? When people release cracks do they think about the effect they are having on the livelihoods of the people who write the software? I think this changes with age though and many get more considerate as they get older. What is your opinion of people that add trojan horses and other malware to cracks? I suppose I might be accused of some degree of hypocrisy ;- , but these really are the bottom-feeders and low-lifes of the world. What types of software do you target? Nothing escapes attention these days. What tools and techniques do you use for cracking? My tools of choice are IDAPro the best disassembler which also includes a debugger and also a mixture of other debuggers depending on the target e. And then there are other associated tools like a decent Hex Editor Hiew, UltraEdit and more specific utilities covering the various cracking fields. There are quite a few books out there on the subject of reverse engineering that list virtually all of the tools in most crackers toolsets. How long does it take you to crack the protection on an average piece of software? How long are you prepared to spend to try to crack a piece of software? For many crackers time is a commodity they have in spades. Are applications protected by commercial anti-piracy software harder to crack than applications with home grown protection? This is a tricky one; commercial anti-piracy software is pretty much exclusively written by ex-members of the cracking community and by default is protected better than many authors own creations. A lot of authors IMHO rightly conclude that improving the attractiveness of their software to potential customers is a much more productive use of their time than writing the ultimate copy protection. Is software that phones home harder to crack? Its worth remembering that a cracker will often have access to a legitimate license with which to perform his study. This will most likely simply move the goalposts, but seeing as a lot of the software I have been asked to look into was leaked to me by company employees the server model might not be as secure as it suggests. Do hardware solutions e. Absolutely not, and anyone who tells you otherwise is lying. What are the commonest mistakes software developers make related to security? In no particular order: Depending on commercial protection schemes for security. Directly comparing the license string entered with the correct one. Using a single simplistic registration function that is easy to isolate. Displaying message boxes with helpful strings sending the cracker straight to the protection code. Not integrity checking against patching. Not updating the software once a crack is discovered in the wild. Do you think software vendors should spend more time making their software harder to crack? Make your protection something custom and use some imagination by all means, but make it proportional to what you are protecting. Can you recommend any online resources for authors wanting to know how they can protect their software better?

Chapter 2 : Interview Cracker â€" Bright Your Career

Best Book for IBPS PO Interview: Interview Cracker Book for All Banking & Insurance Exams Welcome to the online IBPS PO interview preparation section. As we all know that IBPS already released IBPS PO Interview Call Letter are also released.

The Spine Cracker 1. Tell us about yourself and your latest book. I write short stories, novellas and novels across the darker spectrum of horror, crime and noir. Other credits include TV scripts, feature articles, non-fiction books, stage plays, and award-winning medical writing. The back-cover blurb reads: In her late teens, Meredith Berg-Olsen had all the makings of a runway model. Now in her late forties, after everything she had been through â€" including horrors that John could only guess at â€" she looked bloodless instead of pale, skeletal instead of slender, more dead than aliveâ€¦ John Penrose has two secrets. One is the flatmate he keeps hidden from the world: His other secret is the reason he feels compelled to look after her. Contrition is a horror story with noir undertones and an atmosphere of mounting dread. Do you currently have any new projects in the works? It contains stories I wrote from to about , plus three new stories I wrote over the past few months. The stories are dark, melancholic, with overtones of crime-noir and horror. So much work ahead! What advice would you give to aspiring writers? Getting published is not easy in this crowded marketplace. Focus on the writing process and how much pleasure you get from it. Once you get hung up on the numbers â€" royalties, sales, followers, subscribers â€" you start to wake up in the mornings and wonder what the hell you are doing with your life. You are such a prolific writer. How do you stay motivated? For example, every time Christmas rolls around, I promise myself a month off to just relax, watch movies, read, sleep in, recharge my batteriesâ€¦ And then after a week or two, I start feeling antsy and irritable. My advice is to put your current project aside for a while and try a different medium, genre or style that stretches and challenges you. And always have a rough plan for your story. When literally anything could happen next, how can you decide on what to pick? At the very least, know your ending. This usually happens after I finish a long-form project such as a novella or novel. Burn-out used to worry me oh no, what if I can never write again? While it lasts, I work on admin stuff, do some research for an upcoming project, maybe write a non-fiction piece or a short stage-play. The only solution is to wait, and to try using the time productively. A few of my favourites include: What are you reading right now? The Dark Descent horror anthology edited by David G. How long do you think you would survive in a horror story? I might have just enough time to show the main characters a photograph of my family before I die. Every single case was interesting and important to me. I liaised with about detectives from two Australian states Victoria and South Australia , and worked closely with victims of crime or the families of deceased victims of crime. Nevertheless, it was a truly rewarding time in my life. I felt that my efforts made a difference. I felt that I was helping people who needed every bit of help they could get. I deeply admire and respect our police forces in Australia. These men and women do a dangerous, heart-wrenching and sometimes thankless job. And have you ever used a phobia as an influence for your writing? Oh, wow, I have so many fearsâ€¦! The ones I tap into the most would be in no particular order death, loss, the unknown, and random violence. Life is anxiety-producing if you think about it too much. In my opinion, the underlying and unifying philosophy of all horror stories, regardless of subgenre, is simply this:
