We take Amerian Express now! Countertop Surfaces Advantages of Laminate over Competitive Materials By John Driemen, "The Crotchety Contractor" Countertops can be made from lots of materials - solid surfacing, natural or engineered stone, even ceramic or glass tile. But if you want the best selection of colors and patterns, and the lowest price, laminate is your choice. Taking a look at these advantages will show you how favorably laminate stacks up against the high-priced competition. Getting what you want Countertops 4 Less offers many designs colors and patterns on this site. If you want soapstone, another natural countertop material, your choice is black! Laminate also offers more edge choices than other materials. Besides a range of rolled edges and a beveled edge, you can edge your laminate countertop with wood, or use solid surface inserts to create an eye-catching decorative edge. And only laminate can be formed into a seamless cove backsplash to keep spills from seeping behind the cabinets. Selling your house and want to make your kitchen sparkle for potential buyers? The look of laminate Laminate countertops, like those made from granite and engineered stone, have seams where the countertop sections come together. A good fabricator can make laminate seams almost disappear. Not so easy with either natural or engineered stone countertops. And forget about it with tile countertops - both ceramic and granite. No way to do those without grout lines, and their potential for bacteria build-up. Laminate and food preparation Countertops come into direct contact with foods. The less porous the countertop, the less likelihood that bacteria will be trapped in the surface. Laminate performs well here, as the surface is non-porous. Solid surfaces and engineered stone countertops are non-porous as well. Natural stone and concrete need to be resealed every six months, a real nuisance. Even when sealed, grout lines need to be carefully cleaned or they will become bacteria traps. Laminate is easy to clean, and spills like wine and spaghetti sauce come off with little effort. Wear and tear Countertops are meant to be used, so expect normal wear and tear with your laminate countertop. Heat will cause the most damage. Put a hot pot on laminate, and you might leave a scorch mark. Leave a lemon slice on a granite countertop or spill a little vinegar and the granite top will need to be resealed to make it safe against bacteria. Not so with laminate. Knife cuts can go through the color layer exposing the brown underlayment. These cuts cannot be repaired, so be careful and use cutting boards. Solid surfacing can be repaired, but only by a professional. Laminate is not bullet-proof, but it can take a beating.

Chapter 2 : John Driemen | Open Library

*Kitchens (h) Driemen [John Driemen] on calendrierdelascience.com *FREE* shipping on qualifying offers. Presents a variety of design options as well as practical advice on planning, modifying, remodeling, lighting.*
