Ground water supplies are replenished, or recharged, when rain or snowmelt enters the saturation zone. Reservoir A natural or artificial place to store water; water storage created by building a dam; a pond, lake, or basin used for the storage, regulation, and control of water. Ridenbaugh Water Water delivered by the Boise Project for specific water rights from the Ridenbaugh canal. These are usually referred to as easements in Reclamation. River Watermaster The river watermaster manages the water of the Boise River. Rotation A group of homes or single water users who receive water from the same tap or headgate. Rotation Schedule A watering schedule created by the rotation manager. Rotation Manager An elected, appointed or volunteer home owner to help others within his or her rotation get irrigation water. This is not a paid position and is controlled by the users in the rotation or proper water users association. See Title 42 of the Idaho Legislature for rotation rules and laws. S Safety During the water season the danger of drowning in canals, laterals and ditches are exceptionally high. Please keep children and animals safe. Seepage The percolation of water through the soil from unlined channels, ditches, watercourses and water storage facilities. Short Water Year There are many situations that can contribute to a short water year and early allocations, low or poor snowpack is just one of the controlling factors. Side Lining A cement liner in canals and laterals that help protect against erosion. Silting A procedure that can fill gaps in check boards, weirs, weir boxes and headgates. Single Water User Landowner not on a rotation. Siphon An inverted U shape which causes a liquid to flow uphill, above the surface of the reservoir, without pumps, powered by the fall of the liquid as it flows down a pipe under the pull of gravity, and is discharged at a level lower than the surface of the reservoir it came from. A graphical presentation giving daily updates on the current snow pack percentage of normal. Snow Pack One of the water sources that fills Anderson and Arrowrock reservoirs, also one factor in determining allotment. T Tap, Headgate A control structure or gate upstream of a lock or canal; A floodgate that controls the flow of water, as in a ditch.

Chapter 2 : Idaho Street Townhomes in downtown Boise | Boise's Ultimate Home Search!

Irrigation deliveries to lands supplied by the Arrowrock Division of the Boise Project Board of Control and Lake Lowell Reservoir are scheduled.

Chapter 3 : Land and Water Conservation Fund Database: Idaho | InvestigateWest

Lake Lowell, originally called Deer Flat Reservoir, was the first storage reservoir completed for the Boise Project, one of the earliest Reclamation projects. Historic features include the embankment dams which are on the National Register of Historic Places.
