

## Chapter 1 : Regional Gardens Submitted by Our Readers | Garden Design

*The gardens encompass a broad range of landscapes and display gardens, ranging from the more formal gardens of Lila Alle and the South Terrace to the natural terrain of the Dogwood Path, Pond Garden, Rock Wall, and Woods Path.*

Humphry Repton [ edit ] Humphry Repton 21 April – 24 March was the last great English landscape designer of the eighteenth century, often regarded as the successor to Capability Brown. However, as his career progressed Repton came to apply picturesque theory to the practice of landscape design. Repton re-introduced formal terraces, balustrades, trellis work and flower gardens around the house in a way that became common practice in the nineteenth century. In , the English diplomat in The Hague and writer Sir William Temple wrote an essay Upon the garden of Epicurus published in , which contrasted European theories of symmetrical gardens with asymmetrical compositions from China, for which he introduced the Japanese term sharawadgi. He noted that Chinese gardens avoided formal rows of trees and flower beds, and instead placed trees, plants, and other garden features in irregular ways to strike the eye and create beautiful compositions, with an understatement criticizing the formal compositions of the gardens at the Palace of Versailles of Louis XIV of France. The style became even more popular thanks to William Chambers , who lived in China from to , and wrote a book, The Drawings, buildings, furniture, habits, machines and utensils of the Chinese, published in . In he built a Chinese pagoda, house and garden in Kew, London, as part of Kew Gardens , a park with gardens and architecture symbolizing all parts of the world and all architectural styles. Thereafter Chinese pagodas began to appear in other English gardens, then in France and elsewhere on the continent. French and other European observers coined the term Jardin Anglo-Chinois Anglo-Chinese garden for this style of garden. This was largely the result of Horace Walpole , who introduced gothic revival features into his house and garden at Strawberry Hill in Twickenham. A treatise on the English garden, Observations on Modern Gardening, written by Thomas Whately and published in London in , was translated into French in . The new style also had the advantage of requiring fewer gardeners, and was easier to maintain, than the French garden. Even at Versailles, the home of the most classical of all French gardens, a small English landscape park with a Roman temple was built by the Petit Trianon and a mock village, the Hameau de la reine , Versailles , was created for Marie Antoinette. See the French landscape garden. The new style also spread to Germany. In the Netherlands the landscape-architect Lucas Pieters Roodbaard designed several gardens and parks in this style. The style also spread rapidly to Russia, where in Catherine the Great adapted the new style in the park of her palace at Tsarskoe Selo , complete with a mock Chinese village and a Palladian bridge , modeled after that at Wilton House. A much larger park was created for her son Paul in the neighbouring estate of Pavlovsk. The Monrepos Park is sited on the rocky island of Linnasaari in the Vyborg Bay and is noted for its glacially deposited boulders and granite rocks. The dominant style was revised in the early 19th century to include more " gardenesque " [26] features, including shrubberies with gravelled walks, tree plantations to satisfy botanical curiosity, and, most notably, the return of flowers, in skirts of sweeping planted beds. This is the version of the landscape garden most imitated in Europe in the 19th century. The outer areas of the "home park" of English country houses retain their naturalistic shaping. English gardening since the s has been on a more restricted scale, closer and more allied to the residence. The canonical European English park contains a number of Romantic elements. Always present is a pond or small lake with a pier or bridge. Overlooking the pond is a round or hexagonal pavilion , often in the shape of a monopteros , a Roman temple. Sometimes the park also has a "Chinese" pavilion. Other elements include a grotto and imitation ruins. A second style of English garden, which became popular during the 20th century in France and northern Europe, is the late 19th-century English cottage garden.

### Chapter 2 : Best 30 Bushes Landscaping Garden Center in East Hanover, NJ with Reviews - calendrierdel

*Another easy landscaping idea is to add interest to your yard with structure. I often use low fences or hedges, for example, to divide spaces, and give each space or room its own unique identity. Plus, the structures add interest all year long.*

Garden Design A very highly effective rule with garden ornaments is to nestle them in with the planting. An ornament or water characteristic plonked inside the centre of an empty area is unlikely to look good. Birdsong Garden Design focuses on low ecological influence design with our inventive use of a variety of native, non-invasive plants. The doorway garden could also be a formal and semi-public home and so subject to the constraints of convention and local authorized guidelines. Nonetheless, the garden of an unbelievable home or an enormous property could also be larger than a public park. By this level, I used to be so mad I merely did not want to discuss to him ever once more. I used to be happier selecting my very own substitute vegetation and putting them in, vs. Making a up to date begin or coming full circle? After all, you might be in a position to embrace all forms of crops to the garden. There are tons of timber, vines, shrubs, bulbs and extra which is perhaps simple in order to add via drag and drop. A couple of of these objects could be filtered by type, measurement, and lightweight to assist discover those you want. The best way paving is laid and its colour provide a robust design route to your complete garden As an example, grey or white stone laid in a random sample will set the scene for a French nation look. Black or silver paving organised in a day by day design will sort the correct backdrop to a glossy and classy scheme. Whereas buff or golden stone arranged in a random sample creates an English country really feel. Abruptly, I had the time to deal with landscaping. Additionally, to what extent will I want to take care of them going and swap out by means of the summer time season? In temperate western gardens, a easy expanse of garden is commonly considered essential to a garden. Conclusion Terra Verde Garden Design cultivates garden areas that encourage life outside. After you have got deliberate your garden, most of the planners let you print out or save your garden format, including an inventory of provides you will have to purchase to implement your design. Rework your world with stunning inside and exterior container gardens from Winston Flowers.

## Chapter 4 : English landscape garden - Wikipedia

*The team have been enjoying transforming local gardens beneath beautiful sunny skies this week - and the icing on the cake is getting to work for such amazing clients and receiving some lovely feedback in the process.*

Note the quadripartite structure with focal water feature, connecting aqueducts, and surrounding trees, as well as the placement of the palace Shazdeh Garden is one of the largest gardens of Kerman Province. From the time of the Achaemenid Empire, the idea of an earthly paradise spread through Persian literature and example to other cultures, both the Hellenistic gardens of the Seleucid Empire and the Ptolemies in Alexandria. This allows a maximization, in terms of function and emotion, of what may be done in the garden. Persian gardens may originate as early as BCE. The outline of Pasargadae, built around BCE, is viewable today. During the reign of the Sasanian Empire third to seventh century, and under the influence of Zoroastrianism, water in art grew increasingly important. This trend manifested itself in garden design, with greater emphasis on fountains and ponds in gardens. During the Islamic occupation, the aesthetic aspect of the garden increased in importance, overtaking utility. During this time, aesthetic rules that govern the garden grew in importance. The design sometimes extends one axis longer than the cross-axis, and may feature water channels that run through each of the four gardens and connect to a central pool. The invasion of Persia by the Mongols in the thirteenth century led to a new emphasis on highly ornate structure in the garden. Examples of this include tree peonies and chrysanthemums. Babur introduced the Persian garden to India. The now unkempt Aram Bagh, Agra was the first of many Persian gardens he created. The Taj Mahal embodies the Persian concept of an ideal paradise garden. The Safavid dynasty seventeenth to eighteenth century built and developed grand and epic layouts that went beyond a simple extension to a palace and became an integral aesthetic and functional part of it. In the following centuries, European garden design began to influence Persia, particularly the designs of France, and secondarily that of Russia and the United Kingdom. Western influences led to changes in the use of water and the species used in bedding. Traditional forms and style are still applied in modern Iranian gardens. They also appear in historic sites, museums and affixed to the houses of the rich. Sunlight and its effects were an important factor of structural design in Persian gardens. Textures and shapes were specifically chosen by architects to harness the light. Trees and trellises largely feature as biotic shade; pavilions and walls are also structurally prominent in blocking the sun. The heat also makes water important, both in the design and maintenance of the garden. Irrigation may be required, and may be provided via a form of underground tunnel called a qanat, that transports water from a local aquifer. Well-like structures then connect to the qanat, enabling the drawing of water. Alternatively, an animal-driven Persian well would draw water to the surface. Trees were often planted in a ditch called a juy, which prevented water evaporation and allowed the water quick access to the tree roots. The Persian style often attempts to integrate indoors with outdoors through the connection of a surrounding garden with an inner courtyard. Designers often place architectural elements such as vaulted arches between the outer and interior areas to open up the divide between them. In this story Lysander is "astonished at the beauty of the trees within, all planted at equal intervals, the long straight rows of waving branches, the perfect regularity, the rectangular symmetry of the whole, and the many sweet scents which hung about them as they paced the park" [7] The oldest representational descriptions and illustrations of Persian gardens come from travelers who reached Iran from the west. Battuta and Clavijo made only passing references to gardens and did not describe their design, but Kaempfer made careful drawings and converted them into detailed engravings after his return to Europe. The location of the gardens Kaempfer illustrated in Isfahan can be identified. Styles[ edit ] The garden in the Golestan Palace of Tehran. The six primary styles of the Persian garden may be seen in the following table, which puts them in the context of their function and style. Gardens are not limited to a particular style, but often integrate different styles, or have areas with different functions and styles.

*The model for the historic Islamic gardens of the Middle East is found in the Qur'an, which in verses scattered through four chapters describes the colors, sounds, smells, spatial elements, microclimates, trees, flowers, and waters of Heaven. International garden designers in search of.*

By Sarah Hutchinson Share: When Douglas Miller, a Landscape Architect who graduated from Michigan State University, first stepped foot on this Somerset, Maryland property the home was facing an identity crisis. Much like a counselor helps his patients embrace their true selves, Miller helped the owner establish a cohesive exterior style. These Colonial details were not doing the home justice, so Miller suggested switching to a cottage style. Next Miller turned his focus to the backyard where he was faced with a steep slope and exposure to neighboring houses that loomed overhead. His primary goal was to create space for entertaining, which was crucial for the homeowner, who is a local philanthropist and elected official. With the help of stone walls, Miller terraced the hillside and created a series of garden rooms. A variety of garden rooms were created, including this patio. He did so with a two-pronged approach: Evergreens serve as the backbone of this garden with perennials mixed in for pops of color and texture. Newly planted trees help screen the garden from neighbors as well as the street. However, the addition of a storage shed made the biggest privacy improvement. A pergola attached to the new shed, creates a cozy garden nook. Integrated into the new shed is an inviting sitting area covered by a pergola. A custom bench, covered with colorful cushions, fills the corner of the garden nook. He cut and finished a log from the Midwest to fit exactly how we wanted. Other garden rooms Miller created include a lounging patio and a dining area. Here the dining area is set up for a small, sit-down dinner party. Special requests from the homeowner also influenced the creation of this garden. First, he insisted on a large lawn because he likes the look of fresh mown grass. Second, he wanted a fence that could contain his Basset Hounds. Third, he asked that modern elements be used throughout the garden to tie in with the way the interior of the home is decorated. Accessories such as containers and furniture also lean towards a modern aesthetic. This path serves as a secondary entrance. With the help of Miller, this homeowner now has a home with a strong identity that will look good for years to come. Recently, Miller has also helped him complete the front portion of the property with a new driveway. To enhance the cottage architecture, a new wooden front door was added, and the steps were widened. A close-up view of the window baskets, in which the plants are changed with the seasons. ## Chapter 6 : East Coast Garden Finds its True Cottage Identity | Garden Design

*Gunn Landscape Architecture draws on historical French, Italian, and Japanese gardens for its creations, such as this Ocean Road estate in East Hampton. Broadview Gardens This high-end landscape and garden design company has been catering to the East End since*

Top Thu Jan 24, 9: I love landscaping questions. Even the smaller varieties get fairly large. Hard to tell but it looks like you lost the leader on your plant. You have lattice and a very deep eave. If you build a bed against the lattice it will rot before you blink an eye. The water run off from the eave will erode soil, create nasty back splash and damage plants. Because of the lattice you need to install steel edging along the lattice to keep the gravel from falling through. Install another run of edging 6" outside of the drip line. Facilitates drainage and provides a maintenance strip on the back side of your beds. Wrap your bed around the right side. Office Depot used to have them but when mine broke I had to go to the university book store to find one. Draw out your plan. The front of the bed should have curves. Mother nature does not do straight lines. On the right side do a big bump out to accommodate the crepe myrtle. For easy maintenance choose evergreen shrubs. Look for colorful foliage or blooms. Pay attention to mature size. Plant odd numbers of each plant and stagger the planting. Your bed should be no less than 6" high. Use your liriope as a natural edging. Cut it into 4" plugs and plant along the outside edge of your beds. Leave about 6" between each plug. I can "see" how lovely that yard can be and still be low maintenance. Read low not NO. You will have to provide irrigation - soaker hoses work great especially if you have them on a timer. You will have to weed. It will pack down and really help keep the weeds out. Next best is shredded cypress bark - at least 6". Good luck Did I say plan? Yes plan and shop. When weeding, the best way to make sure you are removing a weed and not a valuable plant is to pull on it. If it comes out of the ground easily, it is a valuable plant.
