Putting your computer into sleep state If you will be away from your computer for only a short time, put the computer into sleep state. When the computer is in sleep state, you can quickly wake it to resume use, and bypass the startup process. To put the computer into sleep state, do one of the following. To wake the computer, do one of the following. To shut down your computer, click and select Shut down from the Start menu. Wait until the power indicator light starts blinking indicating that the computer is in sleep state before you move your computer. Moving your computer while the hard disk is spinning can damage the hard disk, causing loss of data. You need to charge the battery in any of the following situations: As each computer user has different habits and needs, it is difficult to predict how long a battery charge will last. There are two main factors: Before removing the battery pack, make sure the computer has been shut down. The battery pack contains a small amount of harmful substances. To avoid possible injury and detriment to the environment, pay attention to the following points: Learning the basics Using the touchpad Touchpad To move the cursor on the screen, slide your fingertip over the pad in the direction in which you want the cursor to move. When the touchpad indicator is lit, the touchpad is disabled. Learning the basics 17 Using the keyboard Your computer has a numeric keypad and function keys incorporated in its standard keyboard. Z The keyboard has a separate numeric keypad. To enable or disable the numeric keypad, press the Num Lock key. The Num lock indicator will light on if the numeric keypad is enabled. To use this function, press and hold Fn ; then press one of the function keys. Learning the basics 19 The following describes the features of each function key. Open the interface for the display device switch to select this notebook or an external display. Open the interface for display resolution settings. Stop playback of Windows Media Player.

Skip to the previous track. Skip to the next track. Activate the system request. Activate the pause function. Activate the break function. Activate the insert function. Learning the basics Connecting external devices Your computer has a wide range of built-in features and connection capabilities. Gently pull the dummy card out of the memory card slot. Removing a memory card 1 Push the memory card until you hear a click. The dummy card is used for preventing dust and small particles from entering the inside of your computer when the memory card slot is not in use. Retain the dummy card for future use. Before removing the memory card, disable it via Windows safely remove hardware and eject media utility to avoid data corruption. The first time you plug a USB device into a particular USB port on your computer, Windows automatically installs a driver for that device. After the driver is installed, you can disconnect and reconnect the device without performing any additional steps. Before disconnecting a USB storage device, make sure your computer has finished transferring data by that device. Click the Safely Remove Hardware icon in the notification area of Windows to remove the device before disconnecting. Typically, Windows detects a new device after connecting it, and then installs the driver automatically. However, some devices may require you to install the driver before connecting. If your USB device uses a power cord, connect the device to a power source before connecting it. Otherwise, the device may not be recognized. You can transfer data between these devices without cables and up to 10 meters range in open space. Enabling Bluetooth communications on your computer 1 Slide the integrated wireless device switch from to. The actual maximum range may vary due to interference and transmission barriers. To get the best possible connection speed, place the device as near your computer as possible. Read the documentation supplied with the Bluetooth enabled device for details on how to pair the device with your computer. These modes are preset enhancements by Lenovo to improve visual and aural experiences via your computer in different usage scenarios. You can manually choose between normal, movie and intelligent mode. Picture or music mode is automatically selected if your computer is in intelligent mode. To manually select a desired mode: The computer switches to the selected mode after 2 seconds. Normal mode The default mode. Movie mode Provides enhanced visual and audio output. Music mode Provides enhanced audio output. Picture mode Provides enhanced contrast and color saturation. Intelligent mode Automatically switch your computer between movie, music, and picture mode according to the program that is running. You can choose between standard, super silent, or efficient thermal dissipation mode. You can also activate the dust cleaning feature by pressing and releasing the thermal control button. Standard mode Standard mode is the factory default mode. It is the recommended work mode for most programs. Super silent mode If your computer is not running large programs and you want a silent work environment, switch your computer to super silent mode.
