*Lesley Sage and Lynne Walley's ebook Maximising people potential is an easy to read book packed full of helpful coaching tools, techniques, models and information. It contains enough information to get a brief understanding of the topics discussed and lots of helpful references if you want to find out more.*

Continuous effort, not strength or intelligence is the key to unlocking our potential. Do you ever feel as though you have all this untapped potential? You may even know what to do, but still, nothing happens. Something is keeping you stuck living your life in Version 1. This new version is the version that will help you achieve your goals and objectives. It will help you tap into your full potential. Maximizing our full potential seems simple on the surface. Taking massive and consistent action moving toward your goals should do it, right? Key pieces are missing that you will need to bring together to maximize how you work toward your goals. But to find those pieces, you will need to go through a little self-assessment process. How to Maximize Your Full Potential Maximizing your potential essentially means getting more out of yourself in every situation. It means doing more in less time and achieving better results. However, to attain higher level results, you need to first upgrade yourself. But how exactly do we do this? You do it by assessing where you are, figuring out where you want to be, and drawing up a plan of action to get there. Or potentially, you feel as though you can take your business to another level. Where am I at in my life right now? What goals would I like to achieve? How would I rate the quality of my daily performance and efforts? What am I doing well? Where am I happy, fulfilled, and successful? Where am I struggling at the moment? What do I want that I have struggled to achieve? Where do I feel as though I have more potential and ability? In what specific areas? Why do I feel this way? How have I let myself down in these areas? How could I potentially improve my output and results? How could I learn from my past successes and failures to help move me forward in a better way? How would raising my personal standards help me achieve my desired results faster? To maximize your full potential, you need to upgrade yourself to Version 2. You have what you have in your life right now because of the personal standards you keep. Raising your personal standards to higher levels helps you perform at higher levels. When you raise your standards, you are no longer settling for mediocrity. You are instead shooting for the stars and pursuing higher-level actions that will get you better results. Raising your personal standards is, however, only a start. There are other pieces to this puzzle you must also bring together to maximize your full potential. For starters, you will need a personal vision and mission statement. This will help guide you along your journey toward your goal. Make sure, though, that your vision and mission play to your personal strengths. Everything you do must play to your strengths. Secondly, you need to commit yourself to constant and never-ending improvement. In other words, become a lifelong learner. Commit yourself to learning everything you can that could potentially help improve your results. Thirdly, you need to cultivate a competitive spirit. You need to challenge yourself each day to push forward toward your goal. To maximize your potential, you also need to be willing to accept criticism and feedback. You need to then use that feedback to make improvements. To hold yourself to your lofty standards, you need to be tough on yourself. The people who achieve massive success in life always hold themselves accountable. In fact, they continually challenge themselves to work harder and do better. To round things off, you also need a plan of action that can help unite all these individual components. The primary purpose of this plan is to guide you toward your goals. However, your plan can also serve as a catalyst to help you broaden your skills, enhance opportunities, and gain valuable experience. Your plan of action, therefore, serves as a platform to help you maximize your ability to achieve your goals. Within the next few sections of this article, I would like to explore several of the above-mentioned areas in a little more detail. You will only get the very best from yourself and from your ability if you commit yourself to development in these nine areas. There are, of course, no shortcuts here. It will take an incredible amount of work. Cultivating a Risk-Taker Mentality To maximize your full potential, you need to feel comfortable taking risks. Yes, life is uncertain. High achievers the world-over are where they are in life because they were willing to make tough decisions. Moreover, they took the risks that provided them with the opportunities to achieve their goals. For every high achiever who risked it all, there are countless stories of people who lost it

all. Risk-taking must be carefully thought through. Before taking a risk, you must weigh up the pros and cons. Ultimately, your objective is to make a decision that involves the lowest amount of risk for the highest returns or opportunities. Having a reasonable level of knowledge, understanding, and awareness about your situation can be very helpful. This will help you to develop the foresight you need to make calculated decisions. However, uncertainty will probably still likely exist. But, tough decisions need to be made to help move you forward. And that, of course, requires courage to follow through with your actions and adapt your approach if needed. You will only get the most out of yourself and from your ability when you show the willingness to step outside your comfort zone and take the necessary risks to achieve your goals.

**Developing Physical Drive to Fuel Motivation** To maximize your full potential, you need to build the physical drive that will fuel your motivation. Physical drive is a hunger and energy that comes from within. It helps carry you forward when the going gets tough. It also helps keep you motivated and interested when doing tedious and repetitive tasks that stop other people in their tracks. To develop the necessary physical drive, you will need to have a definitive life purpose. Your purpose needs to be something that is bigger than you and your goals. It must be something that makes life truly worth living. Physical drive also requires structure. It needs to be backed by a solid plan of action that can help carry you forward each day. When you have a plan of action in place, you are more likely to take decisive action toward your goals. Moreover, you are more likely to stick to your projects and goals when things get tough. Many people quit when facing adversity. This is why they never reach their full potential. And they generally always quit for the wrong reasons. They quit because they lack confidence. In other words, they lack the knowledge, skills, resources, support or experience to get the job done. These are rather things you can acquire over time. This is the only way you will maximize your full potential.

**Challenging Yourself Through a Competitive Spirit** To maximize your full potential, you need to have a competitive spirit. It rather means challenging your best-self each and every day. Your objective should always be the pursuit of excellence in everything you do. It should be all about making progressive, consistent, and incremental improvements each day. Your competition is, therefore, you. That is the benchmark for your performance standards. To maximize your full potential, you must challenge yourself to outperform your very best self. Raise your standards and make an effort to do better, and be better in small ways each and every day.

*The CEO's Guide to Talent Management by R. Wellins, A. Smith, R. Rogers - DDI Careful planning, culminating in a sound talent strategy that is tightly connected to the organization's overall business strategies and business needs, is required for talent management to become ingrained in an organization's culture and practices.*

March 30th, Success Today I want to show you how to reach full potential and how to maximize achievement. A person that wants to reach maximum potential has to start recognizing its talents in order to develop them to strengths. To reach full potential a person has to make the most of his potential. By developing talents a person is able to maximize achievement. How to reach full potential like a high achiever? Discover your strengths, potential, and talents Every person has the ability to develop any kind of talents and strengths. We all have the potential to accomplish every goal that we want to reach. Unfortunately, most of the people have started to focus only on some of their strengths, which means that they are neglecting a lot of their potential. Discover your strengths and talents by evaluating all the things you can do really well. All these talents are your neglected potentials. Start to reactivate them by practicing them and try to reach full potential in these areas maximize potential. After we discussed the neglected potentials we can start to focus on your hidden potential: It is important to know that it is only possible to reach full potential by detecting abilities and talents you were not even aware of: Therefore it is crucial to be very attentive and notice whenever you discover activities you are interested in and seem to have a certain amount of interest and talent in exercising these. Whenever you found such an activity or talent it is necessary to focus on it in order to develop your strengths and reach full potential. These are your known potentials. You might have developed some of these; others might have been just discovered recently. If you feel an interest in these strengths then start to develop them as well to maximize potential in the certain area. Your point of view will start to change since there are no obstacles anymore that prevent you from developing new interests and strengths. How to maximize achievement? Visualize the accomplishment and maximization of your talents Similar to powerful goal setting strategies you could also start to visualize yourself when you maximize achievement in form of maximizing potential and talents. Achieve the maximum Visualization is a method that is being applied by successful businessmen as well as top athletes. You can also benefit from visualizing by thinking as specific as you can be how it will feel when you have maximized your potential and have the ability to maximize achievement. Think about the way it will feel when you wake up filled with tons of energy and the knowledge that you are able to successfully achieve all your goals and desires, simply by using your potentials and strengths. Develop the eagerness to work hard to maximize achievement The maximization of your achievement will require from you to invest of plenty of hours and hard work. Only by getting lots of experiences and learning from failures we will be able to evolve. Success, as well as the maximization of talents, requires a lot of hard work to develop strengths, but if you are willing to invest this time you are able to maximize achievement and reach full potential.

## Chapter 3 : Potential Quotes - BrainyQuote

*Kotter is a consulting firm that helps clients amplify their own potential and overcome the barriers to leading complex change. Founded by the world's foremost change expert, Dr. John Kotter.*

Leo Sun As a manager, maximizing employee potential should be one of your top priorities. Disgruntled, idle workers who do the bare minimum are dead weight for your company. Each employee you hire should be considered an investment in the company. Here are some ideas to help your workers be the best that they can be - and not hate you in the process. Hire the Right People First and foremost, recruit the right people! Applicants who are too opinionated or have "too much personality" are often nixed from the list of potential hires due to their unpredictability. This would be a huge mistake - often these individuals possess leadership characteristics which would enhance your workforce. Identify Existing Skills and Areas for Potential From your workforce, you should assess individual potential. Maybe your data entry grunt actually has skills in other areas, such as product design or technical writing. Get to know your employees, their past experiences and their interests. Often times, an unhappy employee is simply a bored one, stuck in an unchallenging and unfulfilling post. Understand if your employees are natural leaders, followers or innovators. If there are a few cogs that are getting stuck, such as irreparably disgruntled employees, these toxic employees will have to be removed from the equation to insure smooth operations. Nurture and develop talent in house. If you followed the steps above you should have a good idea of who your future leaders will be. Train them continuously, and have them train others. These prospective leaders should also be aware of your intentions to promote them. Let them know that you have your eye on them, to keep them competitive and vying for your attention. Reward these employees generously in the form of awards, bonuses or more flexible work hours. Give them recognition and make them feel like an integral, irreplaceable part of the company. These are the employees you want to pass along professional information and contacts to, in hopes that they will one day rise to a management position. Allow these employees to organize and lead company events in your place. Employees need to be thoroughly and continuously evaluated - not only when they are up for a raise. Set up a fair rating system - efficiency, punctuality, teamwork, attitude - and discuss the results with them after each appraisal. At each appraisal, have the employee set his or her goals for the next appraisal, which will be subsequently gauged. This keeps employees aware of their own goals, and if they stayed their original course or strayed from it. If they stay with it, reward them - if they strayed off the path, remind them of their preset goals. In addition, require employees to take risks. Reward employees who take risks and attempt to think outside the box, even if they fail, since this is a hallmark of a true leader. Now, if you have non-performing employees, even after encouragement, it may be time to part ways. Clearly warn and let go of these employees for non-performance. Make it clear to other employees that the employee was let go because they failed to improve or contribute to the workplace. These ideas should get you better in tune with maximizing employee potential, and as a result, make you a better manager! You Also Might Like
