

The Mayan Temple Of Kukulkan Paper Model - by Gustavo Salazar This is the paper model of the Mayan Temple Of Kukulkan, situated in Yucatán, Mexico. Created by designer by Gustavo Salazar, to view and print this model you will need Pepakura Viewer Free Version (link at the end of this post).

A lot of it comes from other countries over seas. The big question is how does all that stuff get over the sea. The answer is a container ship! There is a very large ship that can carry many metal boxes filled with stuff. The container ship sails from country to country, picking up and dropping off stuff. In today's project we are going to make a container ship from paper. Step 1 First, cut out all the parts along the solid lines. Then stick the two background templates together on the marked area with enough glue. Step 2 Now fold the background along the dotted line so that the colourful sides are facing outwards at first. Cut along the solid line on the picture and then fold the card out the other way, so that the white sides are facing outwards. Ask your parents for help if it is too tricky. Then fold the two sides with the cuts towards the front. Fold them along the dotted lines and stick them behind the card like on the picture so that they overlap a little. When it is dry, fold the pop-up card back into a right angle. Step 5 Now stick the cut-out Mayan temple on the protruding strip of paper with Pritt glue stick: That gives you a great 3D effect! Now you can hide whatever you want to be discovered in your Mayan temple, treasure for example, in the empty space behind. Step 6 To give it a few extra colourful accents, apply a generous amount of green glue on the ground of your rainforest jungle as you wish and let it dry well. Step 7 To make the volcano, first fold the ground inwards and fold the small tabs upwards. Apply a generous amount of craft glue on all the tabs. Step 8 Now roll the volcano together to make a cone and stick it together using the tabs. When it is rolled up you can press the tabs from the inside to make sure they are sticking properly. Step 9 To bring your volcano to life, stuff the cotton wool ball in the top as smoke billowing out from the volcano. You can pull the cotton wool ball apart a little. Step 10 To make the bushes, fold the templates down the middle and fold the coloured tabs inwards. The bushes are now triangular. Stick the two bottom tabs together using your Pritt glue stick so that they can stand up. Then you can place the bushes wherever you like in your jungle landscape. If you want to fold the card together, take the bushes out first. Then simply fold the pop-up card together if you want to put it away or take it somewhere. As soon as you open it, your Mayan temple and the rainforest canopy pop out straight away and you can carry on playing. Have fun with your jungle adventure in the Mayan temples! Take a look at our other jungle craft sets - you can use the fun finger puppets from the jungle theatre in your pop-up card too. Maybe you want to show your friends how to make a Mayan temple, too?

Chapter 2 : Mayan Temple Paper Model Template » Desigtube - Creative Design Content

Mayan Temples. The Mayan Civilization was a pre-Columbian people in Mesoamerica, and is most noted today for having incredible art and architecture as well as the only fully-developed written language in the time period.

Using spare cardboard, make a pyramid-shaped gift box for your unusually-shaped item. Or, transform your spare empty cereal boxes into fancy custom-made gift boxes. For a more textured Become the Pentagonam Clown for Halloween Pentagonam has to be one of the most nightmarish creations on American Horror Story even though she has some pretty tough competition to fend off. Can you think of anything much worse than a pair of hands wriggling their way out of your temples? Well, a pair of hands wriggli In modular origami, you combine multiple units folded from single pieces of paper into more complicated forms. The Sonobe unit is a simple example un Make a buckyball from folded paper with origami To create an origami buckyball, you must start with a piece of paper cut into a triangle with each side about two inches long. Fold the corner of each side into the middle of the opposite side and then unfold to create creases that will be your guide. Next, fold a side up to t Start a fire in a fireplace Longing for the coziness of a fire? Follow these tips for a safe and successful experience. Never use charcoal lighter, kerosene, or gasoline to start a fire in a fireplace. Check in every Wednesday evening for a roundup of user-run activities and how-to projects from the most Make an origami truncated tetrahedron Learn how to make an origami truncated tetrahedron. Get a paper circle and tape. Fold the circle in half twice. Fold one side down the the middle of circle; fold other sides as well so it forms a perfect triangle. Then fold one point of the triangle and repeat other two sides

Chapter 3 : How to Build a Mayan Pyramid Project for School | Sciencing

How to make a Mayan Temple - homework help from Family Makes! I know, it can seem frustrating and kind of odd that teachers insist on sending this type of project home - make a model of 'insert historic monument or artefact here'!

This incredible group of people had a calendar, method of writing and built large cities with the most modern infrastructure of the time. The Mayans are well-known for their towering pyramids and temples, and you can easily create a model of a Mayan pyramid as a project for school when your class is studying this time period. Look at pictures of Mayan pyramids to decide which structure you want to showcase. Chichen Itza is a famous Mayan pyramid, and it is a more simple design than some of the other structures. Cut a piece of plywood to fit your model, making sure that it is small enough to fit through standard doorways without tilting it. Children should ask an adult to cut the board for them. Sand the edges to prevent any splinters, and paint the surface to make it look like the ground. Sciencing Video Vault Use sugar cubes to build the pyramid. Make a large square by gluing the cubes to the board, and then fill it with three or four rows of sugar cubes behind the outer perimeter of the square. Begin to build layers, moving each subsequent square outline in by the width of half of a sugar cube to slowly create the pyramid shape. Repeat the layers until your pyramid is complete. Add additional cubes to build details and other features on the structure. Attach toothpicks with glue to highlight stairways or other linear details. Allow the entire structure to dry, and then you can add color by lightly painting the cubes with paint. Do not saturate the cubes with paint, or they can melt. Tip You can add realistic detail to the base of your project by using paint that has a special sand effect. If you do not have the faux finishing paint, you can just mix a small amount of sand into regular paint, and apply it as evenly as possible. Add fake foliage or small models of people to give your model more details. Be careful when transporting your project since it will be heavy and fragile. If you can, have an adult help you carry it to school in the bed of a pickup or the cargo space of an SUV.

Chapter 4 : PAPERMAU: 3D Pop Up Greek Temple And Church Paper Models - by Studio Sakyo

Mixed image of Mayan lords and a captive for sacrifice derived from traditional temple and pottery images from the Yucatan. Zip file contains AI, EPS and dpi JPG version of the image.

Mayan temples were carefully constructed from native limestone, layer upon layer and block by hand-cut block. To re-create these amazing feats of design, you just need some time and easy-to-find craft supplies. Simply follow these directions to create a model pyramid. Start by cutting a cm inch square to serve as the bottom level of your temple. Cut the next square 5 cm 2 inches shorter 55 by 55 cm. Cut subsequent layers in the same manner, 50 by 50, 45 by 45, 40 by 40 and so on, until you have eight to 10 levels. Once all your pyramid levels are cut, assemble the pyramid from the bottom up, stacking the layers from largest on the bottom to smallest on top, leaving an even inch border on the layers as they rise. Center the top layer on the pyramid, inserting the dowel into the bottom so the entire pyramid stays together. Rip the newspaper into strips to mache to the foam pyramid. You may need lots of newspaper to cover the entire pyramid, so plan ahead, and cut enough strips to cover the entire construction. You do not want to run out of paper while applying the mache. Mix the papier mache paste as instructed on the mix. Dip the strips quickly into the paste and then layer onto the pyramid, starting from the bottom up. Make certain to cover the entire exterior; there should be no foam showing once you are done. While the pyramid dries, cut your cardboard box open, leaving at least a 75 by 75 cm 2. Use the sides to cut four strips, 15 cm 6 inches each, and approximately 60 cm 24 inches long. You will use these strips to create stair ramps for your pyramid. After the pyramid has dried, cut the by cm 6-byinch sections into Using craft glue, adhere the strips to the middle of each side, starting at the bottom and working your way up. The ramps should rise similarly up the side of your pyramid as the original limestone Mayan temple in your reference photo. You can cover these ramps with papier mache if you choose. Using your craft paint and play sand, create a thick mixture and paint the entire structure and ramp. You can give a more textured look to the pyramid by mixing multiple colours of paint and sand and layering the finish. You can also use a dry brush to lightly tap different colours over the dried sand paint to give the temple a weathered look. Tip Other texture and weathering effects that will give your temple an authentic look include painting the temple steps a shade or two darker so they have depth.
