Chapter 2 : Exam Microsoft SQL Server , Business Intelligence Development and Maintenance

Maintenance training and certification boot camp in Washington, DC will teach you experience in working with implementing and maintaining solutions by using the Microsoft SQL Server Business Intelligence tool suite.

Read reviews from recent accelerated courses below or visit Firebrand Stories for written and video interviews from our alumni. A worthwhile experience and a good facility to train in. The instructor was very knowledgeable and very helpful and good at encouraging discussions that helped reinforce the topics being studied. Hard work but great results. No doubt in my mind you're the best. Firebrand Training offers good quality training. I had not studied for over 10 years previously and found the experience easy to adapt to and immersive. I will definitely use Firebrand Training in the future. Thanks for a great week. The format will ensure repeat business throughout my career. The days are long, 12 hours in the classroom plus homework for another 2 hours, breaks are short. The experience is not pleasant, but it is designed to enable you cover a vast amount of topics at a necessary detail in a short period of time. The instructor demonstrated great knowledge and enthusiasm for the subject. Course largely appropriate to requirement. Intense training but a fast way to learn. Trainers are knowledgeable and positive which helps with the long days involved. However, the teaching style and pace has really given me the chance to absorb everything I need to become more knowledgeable in database administration. The facilities are very good. Everything is covered in detail and the training is done in a walk through style with completed examples also available. An excellent learning environment, I am amazed how much I have learnt in such a small space of time. Looking forward to my next course. I always leave with new knowledge and new friends. The class was incredible! Long days and intense but our instructor, kept it fun and lively. It was very informative and provided real world examples whilst still preparing students for the exams. I would recommend the course and instructor! Windows Server training course and I learnt a lot of important stuff in 11 days only. With my busy schedule it was impossible for me to focus and cover all these topics without attending this boot camp. I have found the training facility to be very good and all equipment to deliver the training was substantive. The instructor had a breadth and depth of knowledge that has enabled me to revisit old skills and develop them to a new level, providing me with a strong foundation to get back to work hitting the ground running. Would highly recommend to my colleagues and peers. She made this course incredibly interesting and her enthusiasm was needed to push us through the course in its entirety! She is also a natural trainer who can keep all skill levels in mind while training. Lots of little extras, which will help in the real world.

Chapter 3 : MCTS Sql server business intelligence certification preparation ms

MCTS Self-Paced Training Kit (Exam): Microsoft® SQL Server® Business Intelligence Development and Maintenance This book covered all exam's main aspects. But note that you can not just rely on this book if you didn't worked with SSIS, SSAS and SSRS before.

The field is growing, even in a down economy. This is basically a reflection of the need to make sense of an enormous, and ever-expanding, quantity of data. I was very excited to get my first copies of the last week! A big thanks to Ken Jones and Microsoft Press for their commitment to this. Specifically, there are three things that Teo, Dejan and I focused on in this book to make it valuable: This book is much more than an exam prep guide. We wanted to also broaden its value to make it a great one-stop-shop for learning and excelling on the SQL BI technologies, whether you plan to take the exam or not. If you are planning on taking the exam, we also put a lot of time into the content to make sure that it really prepares you for the exam by covering not just the general material but the background to best understand the types of questions you will come across with lots of Exam Tips! Readable and real world We assume that before you begin using this Training Kit, you have experience developing or implementing BI solutions. We also assume that you have experience managing or supporting BI project security, deployment, and maintenance. The Preparation Guide for Exam is available from <http://www.microsoft.com/presspass/presskit/kit.mspx?cid=2008-08-01>: If you do not have access to this software, you can download a day trial of SQL Server from <http://www.microsoft.com/sqlserver/2008/trynow.aspx>: You can also consider purchasing SQL Server Development, which contains all of the required features. By using this Training Kit, you will learn how to: Develop and deploy SSIS projects. Secure, manage, and troubleshoot SSIS packages. Develop and deploy SSAS solutions. Secure SSAS cubes and dimensions. Implement, configure, and deploy SSRS reports. Manage and secure SSRS report servers.

Chapter 4 : MCTS SQL Server , Business Intelligence Development and Maintenance Certification | Webu

This article profiles the Microsoft SQL Server , Business Intelligence Development and Maintenance (MCTS), meant to be taken by those who are responsible for creating business intelligence (BI) solutions by using Microsoft SQL Server for their organizations.

I wanted to walk away from the class being able to apply what I learned immediately. Most training companies that I looked into were in a state of flux with Power BI mostly due to the transitions that Power BI itself was going through. The class outline seemed to include every topic on my checkoff list plus much more. I decided to give Reza a try. Reza completely lived up to his hype. He took us through a natural progression of the software, using example after example of how to complete a task. We went through real world scenarios, a bare minimum of two scenarios for each minor topic. I was completely impressed with his Power BI knowledge, understanding and abilities. Any question we came to Reza with was answered completely and with even more examples. After the class, my goal of immediately applying what I learned was attained. Right away I was able to successfully pull and massage data, create useful reports and post them to dashboards. And Reza is a masterful user of this tool. Note that Reza covers a lot of ground in this course, and it is pretty fast paced. Reza took the group through all the components that make up environment. He explained how they had evolved and took the group through walk-throughs of each one. Reza was great at answering questions from the audience at the event and going into extra detail if necessary. When Reza worked on our project, nothing phased or flustered him, he always came up with solutions for problems that seemed to me as insurmountable. I had a call with Reza who made my life so much easier in just under an hour! Any time spent speaking to Reza will be well worth it – I have saved hours of trying to get my head around our dashboards by getting some very useful tips and explanations on why things are done the DAX way! Not only that but he is very patient and straight forward. Kemp, Canada The course was an excellent investment overall, it exceed my expectations. It was well paced and presented. The instructor, Reza Rad, was excellent and was able to answer all my questions and explain complex idea in a manner that was easy to understand and follow. I had been using Power BI Desktop for a number of months prior to taking this course, but wish I had attended it sooner! The course structure of 1 day of overall Power BI and followed by 4 days of more intensive instruction on the various parts of Power BI allowed for a basic understanding of the whole, and then more comprehensive learning. The live-on-line experience worked well technically and allowed for questions and problem-solving with the instructor. I learned a lot about Power BI and this course gave me a great foundation for using Power BI to clean, model, design, and share reports using a variety of visualizations that will provide business intelligence to my company. I would recommend this course to anyone wanting to learn Power BI either as a starting point or even after you have used the tool to deepen your understanding and build your skill-set.

Chapter 5 : MCTS – SQL Server , Business Intelligence Development and Maintenance | RADACAD

The Microsoft SQL Server certification tracks are built upon a foundation of three focused Microsoft Certified Technology Specialist (MCTS) certifications – all of which are designed to demonstrate your custom skill set and in-depth understanding of the features and functionality of key technology areas in SQL Server
