

Chapter 1 : user guide | Dynamics NAV Financials

Hi, I am new to Microsoft NAV and am looking for user guides for Microsoft NAV ERP. I have an Oracle ERP background and I am accustomed to easily getting a hold user and configuration materials, but have no luck with Microsoft NAV.

Successful import of certificate will enable the feature. When the feature is enabled, posted sales, purchase and service invoices, credit memos and corrective memos are submitted to the tax authorities. Enabled Enable the SII feature is automatically enabled when you import certificate Batch submission of documents The Enable Batch Submission and Job Batch Submission Threshold fields control if and how documents are submitted in batches Enable Batch Submissions Enable batch submissions of documents. When you enable batch submissions you can either manually submit document in batches or automatically Not enabled: If number of pending entries exceeds the threshold value the system submits ALL pending auto entries. Import certificate Import a valid certificate for the company. Schedule initial upload Use this action when you want to create an XML file with the required records for the initial phase from Jan 1st to June 30th, This must be done before December 31st, current requirement as of June 19, If you want to test the solution you need to change the endpoint to the ones specified in the documentation provided by the tax authorizes, see website: SII information on documents " invoice and transaction types On sales, purchase and service orders, invoices, credit memos and corrective invoices you can enter SII information. Invoice Details from sales Invoice similar fields are found on the other documents, the list of option values differ: Operation Description You can enter a description of the transaction. Default is blank and if left blank the Operation Description will be taken from the Posting Description when the XML file is generated. Special Scheme Code You can enter a value for Regimen codes. Invoice Type You can select an invoice type. Default is F1 for invoices and R1 for credit memos and corrective invoices. You can choose F2 for simplified invoices. Simplified invoices do not have the counterpart information. The fields contain options currently not supported. Partners can customize solutions using these options. A second submission of the document will fill in the XML in the correct way for this scenario. When you resubmit the corrected document the submission will be Accepted with Errors, which is the expected response for such a document. Your business and type of business transactions and any customization you may have may require you to select a different value to meet the reporting requirements under SII. Microsoft can make no guarantee that the use of default values will be compliant in all cases. This can either be empty or have one of the following options, as illustrated: You can also see if a document was rejected and you can see the rejection message. Retry You can resubmit rejected documents. Multiple page selection is used when Batch is enabled. In some cases, the information submitted is tied to the document and you therefore must cancel " create a credit memo manually - the document and send a new with updated information. RetryAll Sends all not-accepted entries regardless of the page selection all system entries. Multiple page selection is used. This XML file can be used to troubleshoot if the submitted document was rejected. The XML documents as provided as-is. Example from Posted Sales Invoices list.

Chapter 2 : Microsoft Dynamics NAV Training Course | Microsoft Virtual Academy

Hello again, Could you please provide a link for a (PDF) user guide/ manual for Dynamics NAV? Supposedly, per module. For example: General Ledger PDF, Cash Management calendrierdelascience.com

June 18, Author: I had run the whole gauntlet of the request for proposal, partner screening, requirements planning, and final selection, and ultimately I was the person in charge and therefore responsible for where our company ended up because of my choice. The first few years of using Microsoft Dynamics NAV were a little rough and I did many of the following things to solve problems: Spent hours on the internet searching for terms that might get me some results. Read the manuals I had gotten from my partner. I spend hours going through the manuals I had been given and trying to piece together how I could do more advanced tasks by cobbling together the simple examples I had. Brainstormed with my boss and my staff. We had quite a few long conversations about how to get things done. Some of these conversations actually solved the problem, many of them ended up with needing to go back to the manuals, or the internet, or to our partner. Just tried it in the live system to see if I could figure it out. Sometimes this was successful and sometimes it created more problems than where I had started. When pressed, I took the risk in small steps to see if I could get it figured out. Called our partner for help. When all of the above failed, I would reach out to our partner for assistance and pay them to help us out. What an incredible waste of time! I had spent hours and hours of time trying to solve simple problems. Because I thought I was alone. Because I thought I was the only person who could solve what we had. Eventually, I got smarter. What do they do? I went back to the internet and looked again, and this time, I learned about user groups and began to look for a user group for Microsoft Dynamics NAV, and I found one! I started small, lurking in webinars and listening and learning and applying all the things I learned back at the office. While I do still go to the internet for answers, I know where to go and where not to go to get my answers. I know where to get the right manuals for what I really need. I still pay my partner for help, but I get to pay them for things that really make a difference in improving things at my company instead of paying them to help with things I should be able to do myself. Most importantly, I have a whole network of Controllers and CFOs and other professionals from other companies who I can email or call to help solve a problem.

May 7, Author: For versions prior to NAV, CustomerSource has published an Overview of Training Manuals as well as a Learning Plan for each version which made it easy to find all of the resources available for that version. For some reason, they have chosen not to do that with NAV which does make the manuals a good deal more difficult to locate. Look up the following courses using the search box to get to more information about NAV Installation and Configuration

April 22, Author: This is by far the most common question I get from people looking for answers about account schedules. If you want to search on your own, here is the place to start. Another good source are the Learning Plans for each version. On the left hand navigation bar, choose Training and Certification, then choose Learning Plans for Microsoft Dynamics from the main page. At the top of the left hand navigation bar, there is a search box. Course Business Intelligence for Information Workers. If you are an existing customer, using NAV 5. Find the link to this wealth of information here or under the Blogroll as Microsoft Dynamics CustomerSource.
