Chapter 1 : Microsoft System Center Unleashed - PDF Free Download - Fox eBook

Today System Center Service Manager Unleashed has been published. This is the second Service Manager book in the very popular Unleashed series of books from Sams Publishing. This book is full of "why" and "how to" content around Service Manager.

More Information Issues that are fixed in this update rollup This update fixes the following issues that were not previously documented in the Microsoft Knowledge Base: Issue 1 If the Manual Activities list that is displayed in the Service Manager portal exceeds a certain limit, page loads time out and do not display correctly. This causes a blank page to be displayed. Issue 2 Incorrect cleanup of custom related types cause grooming on the EntityChangeLog table to stall. This causes the table to grow significantly. Issue 3 Service requests finish unexpectedly because of a race condition between workflows. Issue 4 The console crashes when you double-click the parent incident link on an extended incident class. Issue 5 Windows PowerShell tasks that are created by using the authoring tool do not run because of an incorrect reference to certain assemblies. Issue 7 "Run as Accounts" is enabled for use with the release version of Exchange Connector 3. Issue 9 Service requests that are put on hold are evaluated incorrectly as completed. Issue 10 File attachments are not being correctly saved in the database. Issue 11 The RunbookMonitorWorkflow process cannot handle a failed status of runbooks workflow. Issue 12 After you upgrade to SP1, new "Service Dependents" entries that are created for "Business Services" cannot be seen in the console. Issue 13 Later activities in a service request start to run even though the current activity is not yet complete. Issue 14 The Review Activity "add reviewer" workflow cannot run. Issue 15 Simple lists in a self-service portal do not function correctly in the shared services provider SSP after you upgrade to SP1. Issue 16 Windows PowerShell tasks that are created by using the authoring tool do not run. This occurs even when you send email messages to users from the console. Issue 19 After you select the Assigned to me view, you receive a FullAdapter" exception error message about one hour later. Issue 20 Service Manager console maximized window fixes include the following: When maximized, the console is slow or unresponsive and has up to 30 percent CPU usage. Context menus in the console do not display where they are expected. Instead, they appear at the upper-right corner of the window. Work item scroll bars in the preview pane do not display correctly when you run in full-screen mode. When they do appear, they are inactive and cannot be used. Forms and wizards are not always displayed correctly. Only the left navigation pane is displayed, and the right side area is blank. Issue 21 When you edit or create request offerings, user prompts do not display correctly. Issue 22 Concurrent Windows PowerShell workflows cannot run, although they are listed as successful in the console. Issue 23 An error occurs in the console when you try to open an attachment in a work item form that was already opened. Issue 24 The attachment and its associated details of the release record cannot be retrieved after it is marked as closed. Issue 25 The request offering form takes a long time to display when you create service requests from request offerings. The console crashes when you try to use an SR template that has an assigned analyst. Issue 26 Creating a service request can cause a NullReferenceException error and can cause the console to crash. The error states that the query processor ran out of internal resources and could not produce a query plan. This causes a divergence in the data that is synchronized between the Service Manager and Configuration Manager databases. Update information This update is available for download from the following Microsoft websites. Microsoft Update To obtain and install an update package from Microsoft Update, follow these steps on a computer that has an applicable System Center SP1 or R2 component installed: Click Start, and then click Control Panel. In Control Panel, double-click Windows Update. Click Important updates are available. Select the Update Rollup packages that you want to install, and then click OK. To install the selected update packages, click Install updates. Manual download of the update packages Go to the following website to manually download the update packages from the Microsoft Download Center:
