

Chapter 1 : Modulor 2, (Let the user speak next) Continuation of 'The Modulor' by Le Corbusier

Modulor 2 (Let the User Speak Next). Paperback - Be the first to review this item. See all 8 formats and editions Hide other formats and editions.

First paperbound edition, second printing from Wrappers lightly worn and spine typography sun-faded as usual with this edition. Interior unmarked and very clean. A very good copy. Le Corbusier developed the Modulor between and in an era which was already displaying widespread fascination with mathematics as a potential source of universal truths. In the Milan Triennale organised the first international meeting on Divine Proportions and appointed Le Corbusier to chair the group. On a more prosaic level, the metric system in Europe was creating a range of communication problems between architects, engineers and craftspeople. At the same time, governments around the industrialised world had identified the lack of dimensional standardisation as a serious impediment to efficiency in the building industry. In this environment, where an almost Platonic veneration of systems of mathematical proportion combined with the practical need for systems of co-ordinated dimensioning, the Modulor was born. For Le Corbusier, what industry needed was a system of proportional measurement which would reconcile the needs of the human body with the beauty inherent in the Golden Section. If such a system could be devised, which could simultaneously render the Golden Section proportional to the height of a human, then this would form an ideal basis for universal standardisation. Using such a system of commensurate measurements Le Corbusier proposed that architects, engineers and designers would find it relatively simple to produce forms that were both commodious and delightful and would find it more difficult to produce displeasing or impractical forms. Le Corbusier saw that such a system could be patented and that when it became universally recognised and applied he "would have the right to claim royalties on everything that will be constructed on the basis of [his] measuring system. Le Corbusier advised his assistant Hanning to take this hypothetical "man-with-arm-upraised, 2. This third square should give you a solution. The place of the right angle should help you to decide where to put this third square. In one sense it represents a final brave attempt to provide a unifying rule for all architecture - in another it records the failure and limits of such an approach. Le Corbusier is quite open when he notes that the Modulor has the capacity to produce designs that are "displeasing, badly put together" or "horrors. Large dimensions are impossible to sense with any accuracy and so Le Corbusier does not advocate the use of the Modulor for these scales. Similarly construction techniques render the use of the modular for very small dimensions impractical. This proviso is important to remember and it is in part responsible for the way in which Le Corbusier eventually applied the rule.

We publicly state that we have factors when it comes to scanning, indexing and ranking. Generally, the number of algorithms is a casual number. For instance, one algorithm can be used to display a letter on the search results page. Therefore, we believe that counting the exact number of algorithms that Google uses is not something that is really useful [for optimizers]. Since Google Penguin was modified into real-time update and started ignoring spam links instead of imposing sanctions on websites, this has led to a decrease of the value of auditing external links. According to Gary Illyes, auditing of links is not necessary for all websites at the present moment. These companies have different opinions on the reason why they reject links. In case your links are ignored by the "Penguin", there is nothing to worry about. I have it for 4 years already and I do not have a file named Disavow. I do not even know who is referring to me. Thus, in the case when before a website owner was engaged in buying links or using other prohibited methods of link building, then conducting an audit of the reference profile and rejecting unnatural links is necessary in order to avoid future manual sanctions. It is important to remember that rejecting links can lead to a decrease in resource positions in the global search results, since many webmasters often reject links that actually help the website, rather than doing any harm to it. Therefore, referential audits are needed if there were any violations in the history of the resource. They are not necessary for many website owners and it is better to spend this time on improving the website itself, says Slagg. The reason is that the crawler already scans the content that fast, so the benefits that the browser receives web pages loading time is decreased are not that important. We are still investigating what we can do about it. We can cache data and make requests in a different way than a regular browser. But with more websites implementing push notification feature, Googlebot developers are on the point of adding support for HTTP in future. Therefore, if you have a change, it is recommended to move to this protocol. The question to Mueller was the following: Do you check each and every report manually? No, we do not check all spam reports manually. Most of the other reports that come to us is just information that we collect and can use to improve our algorithms in the future. At the same time, he noted that small reports about violations of one page scale are less prioritized for Google. But when this information can be applied to a number of pages, these reports become more valuable and are prior to be checked. As for the report processing time, it takes some considerable time. As Mueller explained, taking measures may take "some time", but not a day or two. It should be recalled that in , Google received about 35 thousand messages about spam from users every month. This was told by the search representative, John Mueller during the last video meeting with webmasters. One of the participants asked Mueller at the meeting: The only problematic situation that may occur is when all these pages point to the main page as canonical. But if the website contains a large number of pages with the same content URLs with different parameters, etc. At the same time, the share of Google Image Search fell to This information has come from analysts of the American company Jumpshot in partnership with co-founder Moz Rand Fishkin. During the research, they analyzed search data in Google Search, Images, Maps, YouTube, Yahoo, Bing, Amazon, Facebook, Reddit and Wikipedia for the period from October to May with a sole purpose to determine the resources that accounted for the largest number of search engines Sessions and traffic. Bing and Yahoo both showed growth of up to 2. The number of search sessions in Google has exceeded 30 billion a month as of October The results of the organic search in went down to the bottom. November gave the highest rates of search activity without clicks and was ranked at At the same time, the lowest indicator was in October, which is only According to Jumpshot, the largest traffic is generated by Google: During this period, YouTube also showed better results and went up by 0. This information was reported reported by Reuters. According to the agency, WhatsApp imposed conditions on the users that obliged them to agree to data transfer to Facebook parent company. In particular, they were persuaded that without agreeing on this they would not be able to continue using the service. The WhatsApp press service

commented on this situation the following way: The fact that WhatsApp will open Facebook access to the user base became known in August. From now on the website, the content of which was used to generate a response will no longer be displayed in the search results. The reference to it is contained only in the block with the answer. Now the block with the answer is the only result for the page on a specific request," says The SEM Post blog. It is noted that the new feature is currently available for many users, but not all of them. This can mean a large-scale testing or a gradual launch. The phenomenon was named PAIR. At the moment, the program involves 12 people who will work together with Google employees in different product groups. The project also involves external experts: The research that will be carried out within the framework of the project is aimed at improving the user interface of "smart" components in Google services. Scientists will study the problems affecting all participants in the supply chain: Google wants to make AI-solutions user-friendly and understandable to them. As part of the project, Google also opened the source code for two tools: Facets Overview and Facets Dive. Programmers will be able to check the data sets for machine learning for possible problems using the tools mentioned. For instance, an insufficient sample size. The question to Mueller was: We discussed this issue for a long time, at least inside the team. In particular, what should we do in this case. Using Canonical, you are telling that two pages should be processed identically. Noindex reports that the page that contains it must be removed from the search. Therefore theoretically our algorithms can get confused and decide that you need to delete both pages. Or they can process them in different ways, taking into account Noindex attribute.

Chapter 4 : Courbusier Le Courbusier (Author of Modulor 2, (Let the User Speak Next))

pp. Index. Diagrams. Edgewear, corners rubbed. Prev owner's name on front endpaper. ; 12mo 7" - 7½" tall.
