Chapter 1 : Mucosal Defense in Barrett's Esophagus – University of North Carolina at Chapel Hill

Mucosal Defense in Barrett's Esophagus. / Orlando, Roy C. *Barrett's Esophagus and Esophageal Adenocarcinoma: Second Edition.* Blackwell Publishing Ltd., p.

Ajay Bansal and Prateek Sharma. Fitzgerald, and Michael J. Pandolfino and Peter J. Peter Malfertheiner and Ulrich Peitz. Feagins and Rhonda F. Mendelin and John R. Targeting High Risk Patients. Inadomi and Joel H. Kara, Prateek Sharma, and Jacques J. Wildi and Michael B. Wang and Jacques Van Dam. Wang and Navtej S. Ann Marie Joyce and Gregory G. Lal and Brant K. Janusz Jankowski and Edyta Zagorowicz. Bergman and Paul Fockens. Shyam Varadarajulu and C. Reviews "The second edition of this book Sharma and Sampliner, have done their job admirably. What is evident is not only their expertise but that their hands-on approach dictates the tone of this book. The editing is tight with little repetition of subject matter in chapters. In fact, in some chapters where one wonders why a specific topic was not covered, you can be sure it is covered in a related chapter. The authors chosen for each chapter are experts in their fields and all are exquisite writers and thinkers. In a word, this is the best guide to this difficult condition the reviewer has had the chance to examine in recent years. Once again, outstanding authors were selected to write the individual chapters for the Second Edition. There is an excellent chapter on clinical and epidemiologic features of esophageal adenocarcinoma. The sections on the role of endoscopy have been broadly expanded. There are several excellent, up-to-date discussions of high resolution endoscopy. The sections on ablative therapies are brief and well done. However, there continue to be new, available devices such as the HALO system for which there are no publications in the peer reviewed medical literature that cannot be discussed. The surgical section has been expanded to include a more detailed discussion of surgical techniques available to patients with esophageal adenocarcinoma. The numerous color photographs in this edition are terrific. It is well written, thorough, and as up-to-date as any textbook can be on a rapidly evolving area. This is an excellent textbook for anyone with an interest in esophageal disease or gastrointestinal cancer. It would be an essential textbook for any medical library. Chapter 3 : ECU Libraries Catalog

7 Mucosal Defense in Barrett's Esophagus. Roy C. Orlando. There are detailed discussions of every aspect of Barrett's esophagus and esophageal adenocarcinoma.

The link between this disease and gastrointestinal cancer is also one of the hottest topics in gastroenterology at the moment. It has been completely revised, updated and extended to include the latest research findings and describes how these affect day-to-day clinical practice. It includes seven new chapters and even more color images than the last edition. Each chapter, written by the leading international experts in the field, provides clear, didactic guidance on diagnosis, treatment and management of this condition. All aspects of diagnosis, secondary prevention, multimodality, and medical and surgical treatment are clearly explained. Ajay Bansal and Prateek Sharma. Fitzgerald, and Michael J. Pandolfino and Peter J. Peter Malfertheiner and Ulrich Peitz. Feagins and Rhonda F. Mendelin and John R. Targeting High Risk Patients. Inadomi and Joel H. Kara, Prateek Sharma, and Jacques J.
