What is bond paper? Bond paper Printers stopped using blue ink many years ago - it was very difficult to read, and the fumes were dangerous to inhale. So what we used to refer to as blueprints are now called bond copies black ink printed on white bond paper. In either case, you can always purchase more bond copies later on if you need them, or upgrade to a Mylar, PDF or CAD version your original cost will be deducted from the price of the upgrade. Bond copies cannot be duplicated, but they come with a formal Copyright License that gives you the legal right to construct the house, and to modify the plans beforehand to suit your needs. If allowed in your area, modifications can be "marked up" some people refer it as "red-lining" right on the plans. These semi-transparent sheets are actually a thin-film composite that was designed for plan modification, using a simple electric eraser. The ink that is printed on them sits on the surface instead of sinking into a coated vellum sheet , so lines and dimensions can be erased and redrawn quite easily by any design professional. After the changes have been made to this "master" copy, you or your builder can then print as many copies as you need, whenever you need them, on regular bond paper. That way everyone - you, your builder, his or her subcontractors, local permit officials, and your lender - will have the final version of the plans to work with. Even though they cost a bit more initially, they will definitely save you time and money later on. Mylar copies come with a formal Copyright Release giving you the legal right to modify them in any way you wish, and to make as many copies of the plans as you need to successfully build one house. Mylar copies are shipped with a free bond copy of the plans, so that you have something to look over and mark up before making final decisions about the changes you want made to the "master" set. What are PDF electronic files? These are electronic files that can be emailed from computer to computer. You can open them on your own computer as well as email them to others, and the Copyright Release you receive with them allows you to make as many copies as you need before and after modifications are made. The builder can zip them to their sub-contractors, truss manufacturers, and if needed an engineer; you can open them on your own computer to view at your home or office; and you can zip them to your builder or builders , lender, and anyone needing to approve the plans before construction. What are CAD files? This can speed up the process of modification dramatically - for example, a change in one part of the plans creates an automatic change throughout the drawings -- potentially saving the person making the changes quite a bit of time, and thus saving you quite a bit of money! Like the Mylar and PDF options, these plans come with a formal Copyright Release giving you the legal right to modify them in any way you wish, and to make as many copies of the plans as you need to successfully build one house. If the changes you wish to make to our plans are rather extensive, or structural in nature including changing exterior wall systems , purchasing the plans in CAD format will almost certainly be your best option. Design professionals charge by the hour, and making changes to electronic files is much faster and easier than erasing and redrawing lines and dimensions on a Mylar copy. So purchasing an electronic version of the plans can save you both time and money. The files you receive will provide the drawings in at least two formats: DWG files that will enable the person modifying your plans to do so using AutoCAD software the standard for the entire construction and engineering communities ; and. PDF files that will enable you to view the plans on your home or office computer. If the plans were originally drawn with a design software program other than AutoCAD eg.

## Chapter 2 : Passive Solar Plans - Unique Energy Efficient Hillside Home

*Comment: Connecting readers with great books since Used books may not include companion materials, some shelf wear, may contain highlighting/notes, may not include cdrom or access codes.*

## Chapter 3 : # 8x8 Metal Storage Shed #

Add tags for "Multi-level and hillside home plans: with energy efficient solar designs.". Be the first.

## Chapter 4 : Books by Garlinghouse Company (Author of Single Level Home Plans)

*Multi-Level and Hillside Home Plans With Energy Efficient Solar Designs [Co Garlinghouse, L. F. Garlinghouse, Garlinghouse Company] on calendrierdelascience.com \*FREE\* shipping on qualifying offers.*

## Chapter 5 : Hillside Home Plans at calendrierdelascience.com

*Find the perfect home design to suit the needs of your family and budget. These multi-level home plans are perfect for difficult lot conditions or to instill a healthy lifestyle!*

## Chapter 6 : Passive Solar House Plans | The Plan Collection

*Hillside home plans provide buildable solutions for homes that are slated for construction on rugged terrain, sloping lots, or hillside building sites. Hillside house plans are frequently referred to as either sloping lot plans or split-level plans and are specifically designed for property that possesses either a sharp or steady incline.*

## Chapter 7 : Multi-Level Home Plans - Bi-Level Houses | House Plans and More

*However, some hillside home plans in this collection are designed for lots that slope to the front, with a garage and storage on the lower level. Elevators make it easier to age in place and are found in some of these hillside designs, or can be added in with modifications.*

## Chapter 8 : Smart Hillside Home Using Solar Orientation And Passive Ventilation - calendrierdelascience.com

*The stairwell is highlighted by another two-story arch-top calendrierdelascience.com impressive master suite features a vaulted ceiling and arch-top windows in the bedroom, a sizable walk-in closet, and an attached calendrierdelascience.com Plans: See these other sloping lot designs - calendrierdelascience.com other hillside home plans, don't miss AM, AM and AM.*

## Chapter 9 : Split Level House Plans & Designs | The Plan Collection

*The split level (sometimes called a multi-level) style home plan began as a variation of a ranch style house plan. The split-level house plan often maintained the shallow pitched roof and architectural styling of the ranch.*
